Answers for industry.

Integrated technologies, vertical market expertise and services
for greater productivity, energy efficiency, and flexibility.

The Siemens Industry Sector is the world's leading supplier of innovative and environmentally friendly products and solutions for industrial companies. End-to-end automation technology and industrial software, solid market expertise, and technology-based services are the levers we use to increase our customers' productivity, efficiency and flexibility. With a global workforce of more than 100 000 employees, the Industry Sector comprises the Industry Automation, Drive Technologies, and Customer Services divisions, as well as the Metals Technologies Business Unit.

We consistently rely on integrated technologies and, thanks to our bundled portfolio, we can respond more quickly and flexibly to our customers' wishes. With our globally unmatched range of automation technology, industrial control and drive technology as well as industrial software, we equip companies with exactly what they need over their entire value chain – from product design and development to production, sales and service. Our industrial customers benefit from our comprehensive portfolio, which is tailored to their market and their needs.

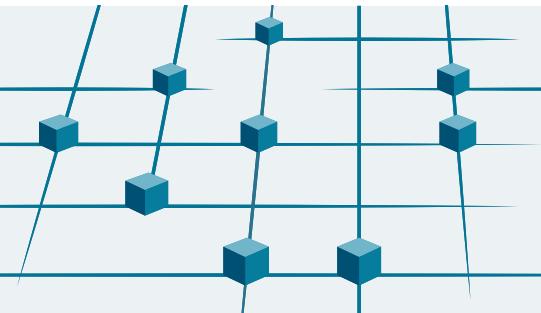

Market launch times can be reduced by up to 50 % due to the combination of powerful automation technology and industrial software from Siemens Industry. At the same time, the costs for energy or waste water for a manufacturing company can be reduced significantly. In this way, we increase our customers' competitive strength and make an important contribution to environmental protection with our energy-efficient products and solutions.

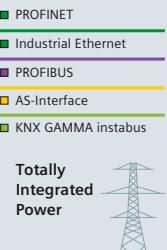

Efficient automation starts with efficient engineering.

Totally Integrated Automation: Efficiency driving productivity.

Efficient engineering is the first step toward better production that is faster, more flexible, and more intelligent. With all components interacting efficiently, Totally Integrated Automation (TIA) delivers enormous time savings right from the engineering phase. The result is lower costs, faster time-to-market, and greater flexibility.

Totally Integrated Automation
Efficient interoperability of all automation components

A unique complete approach for all industries

As one of the world's leading automation suppliers, Siemens provides an integrated, comprehensive portfolio for all requirements in process and manufacturing industries. All components are mutually compatible and system-tested. This ensures that they reliably perform their tasks in industrial use and interact efficiently, and that each automation solution can be implemented with little time and effort based on standard products. The integration of many separate individual engineering tasks into a single engineering environment, for example, provides enormous time and cost savings.

With its comprehensive technology and industry-specific expertise, Siemens is continuously driving progress in manufacturing industries – and Totally Integrated Automation plays a key role.

Totally Integrated Automation creates real value added in all automation tasks, especially for:

- **Integrated engineering**

Consistent, comprehensive engineering throughout the entire product development and production process

- **Industrial data management**

Access to all important data occurring in productive operation – along the entire value chain and across all levels

- **Industrial communication**

Integrated communication based on international cross-vendor standards that are mutually compatible

- **Industrial security**

Systematic minimization of the risk of an internal or external attack on plants and networks

- **Safety Integrated**

Reliable protection of personnel, machinery, and the environment thanks to seamless integration of safety technologies into the standard automation

Making things right with Totally Integrated Automation

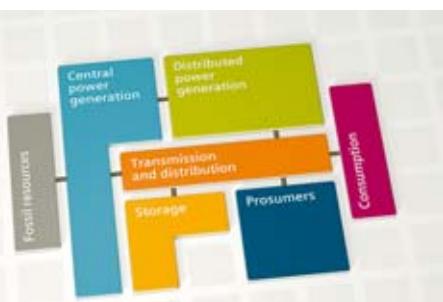

Totally Integrated Automation, industrial automation from Siemens, stands for the efficient interoperability of all automation components. The open system architecture covers the entire production process and is based on end-to-end shared characteristics: consistent data management, global standards, and uniform hardware and software interfaces.

Totally Integrated Automation lays the foundation for comprehensive optimization of the production process:

- Time and cost savings due to efficient engineering
- Minimized downtime due to integrated diagnostic functions
- Simplified implementation of automation solutions due to global standards
- Better performance due to interoperability of system-tested components

Totally Integrated Power We bring power to the point – safely and reliably.

Comprehensive answers for power distribution in complex energy systems – from Siemens

Efficient, reliable, safe: These are the demands placed on electrification and especially power distribution. And our answer – for all application areas of the energy system – is Totally Integrated Power (TIP). It's based on our comprehensive range of products, systems, and solutions for low and medium voltage, rounded out by our support throughout the entire lifecycle – from planning with our own software tools to installation, operation, and services.

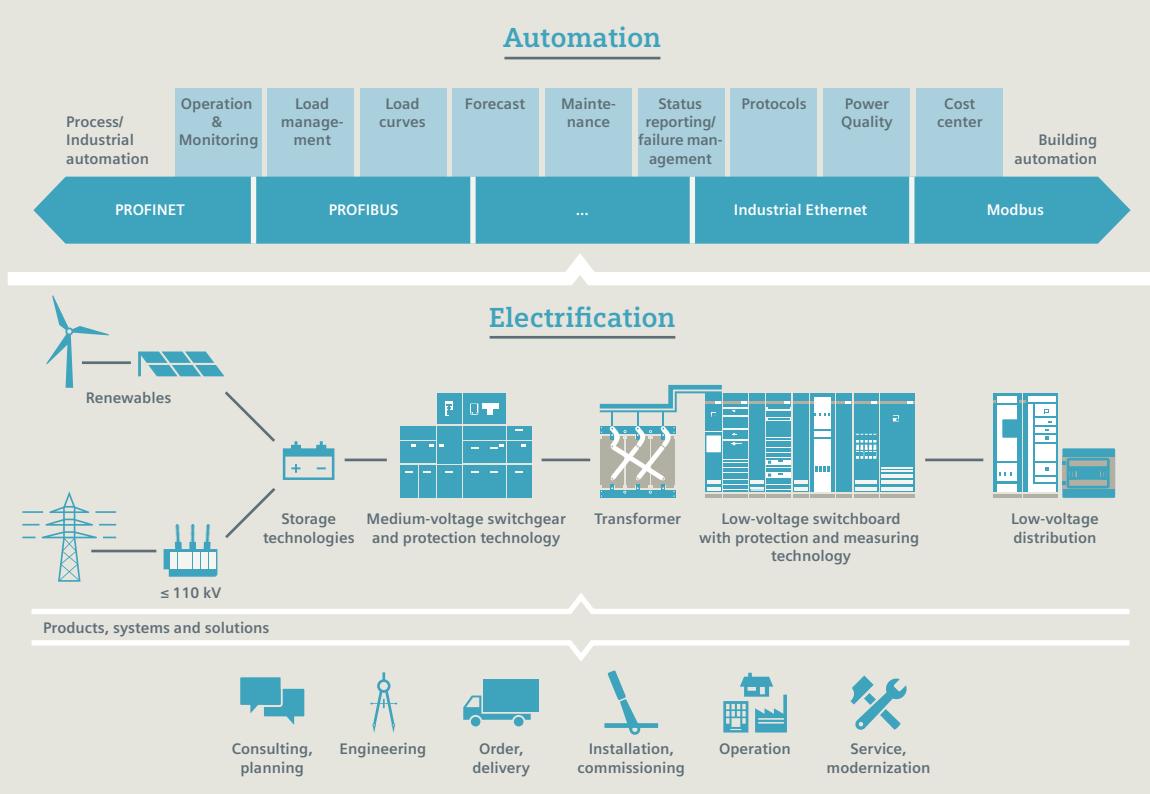

Smart interfaces allow linking to industrial or building automation, making it possible to fully exploit all the optimization potential of an integrated solution. This is how we provide our customers around the world with answers to their challenges. With highly efficient, reliable, and safe power distribution, we lay the foundation for sustainable infrastructure and cities, buildings, and industrial plants. We bring power to the point – wherever and whenever it is needed.

More information: www.siemens.com/tip

Totally Integrated Power offers more:

- Consistency:**
For simplified plant engineering and commissioning as well as smooth integration into automation solutions for building or production processes
- One-stop-shop:**
A reliable partner with a complete portfolio for the entire process and lifecycle – from the initial idea to after-sales service
- Safety:**
A comprehensive range of protection components for personnel safety and line and fire protection, safety by means of type testing
- Reliability:**
A reliable partner who works with customers to develop long-lasting solutions that meet the highest quality standards
- Efficiency:**
Bringing power to the point means greater plant availability and maximum energy efficiency in power distribution
- Flexibility:**
End-to-end consistency and modular design of Totally Integrated Power for any desired expansions and adaptation to future requirements
- Advanced technology:**
Reliable power distribution especially for applications in which supply is critical, continuous refinement of the technology

Challenges are our speciality

1 Introduction

LOHER motors

Customized and industry-specific drive solutions in the process industry

Overview

With the LOHER CHEMSTAR, LOHER VARIO and SIMOTICS XP motor series, Siemens has a range of drive solutions that are specifically tailored to customized or industry-specific requirements.

Building on well-proven standard platforms, the motors and converters are adapted to a specific project with considerable versatility in terms of mechanical and electrical design, as well as special monitoring systems and cooling methods. Totally individual drive systems are generated as a consequence which are tailor made for the respective plant, application or customer specification, thus enabling even highly sophisticated drives to be achieved over the complete output range.

Motors in all applicable types of protection – from 0.1 kW through to the Megawatt range

LOHER CHEMSTAR and LOHER VARIO motors are available depending on their classification from 0.1 to around 3000 kW in all applicable types of protection. The motors ensure reliable operation even in explosive atmospheres and provide maximum safety for persons, machines and the environment.

The motors are available with the following types of protection:

- Dust explosion protection in hazardous zones 21 and 22
- "Non-sparking" **Ex nA** for Zone 2
- "Pressurized enclosure" **Ex p** for Zone 1
- "Increased safety" **Ex e** for Zone 1
- "Explosion-proof enclosure" **Ex d** for Zone 1

The portfolio comprises motors of Group II (EU directive 94/9/EC) for use in environments containing explosive gases in the chemical, petrochemical and oil and gas industries, as well as motors of Group I for firedamp protection in mining.

The motors are ATEX certified and also have country-specific certificates such as EAC (Eurasian Customs Union), CCOE (India) and NEPSI (China). The range of explosion-proof low-voltage motors has been expanded with motors of the SIMOTICS XP series. It represents the future standard product series. The SIMOTICS XP motors are available in the type of protection "Explosion-proof enclosure" **Ex d** for an output range from 0.25 to 500 kW and supplement the LOHER CHEMSTAR series. In comparison to the LOHER CHEMSTAR series, the smaller range of products and fixed product characteristics ensure significantly shorter delivery times and a considerably easier ordering process.

Double protection for maximum safety

LOHER CHEMSTAR and LOHER VARIO motors can also be used for drive solutions with double protection. This involves, on the one hand, a combination of gas and dust explosion protection for locations in which both fine dust and explosive gases can occur, e.g. in the process industry or in mining. On the other hand, this can be the double protection of the Ex d and Ex e types of protection. This double protection is, for example, appropriate onboard liquid gas tankers whereby electrical equipment must be totally excluded as a possible ignition source due to the hazardous load. For this purpose, the explosion-proof motors are mechanically designed with the type of protection "Explosion-proof enclosure". At the same time, the temperatures of the active parts correspond to the type of protection "Increased safety".

Further products

This catalog contains explosion-proof motors in fin-cooled designs. In the case of high outputs up to 13.5 MW, tube-cooled motors are available (normally in the type of protection "Explosion-proof enclosure" Ex d) as well as LOHER VARIO PLUS motors with built-on heat exchangers (air-to-air or air-to-water). The normal types of protection here are "Non-sparking" Ex n and "Pressurized enclosure" Ex p. Specially designed motors are also available in the larger frame sizes for converter-fed operation. They are characterized by subcritical operation, i.e. the critical bending speed is higher than the rated speed. The full control range can be utilized. The motors are designed with sleeve bearings or roller bearings in accordance with their output and number of poles.

Customized and industry-specific drive solutions in the process industry
Application

The drive solutions with LOHER motors are matched to application-specific requirements – whatever extreme the actual location of use. The range comprises, in particular:

- Explosion-proof drives of all common types of protection
- Winch drives that stand unprotected on the deck of a ship
- Subsea components for transporting mineral resources from the deep sea
- Drill drives for drilling tunnels or for underground coal mining
- Smoke extraction motors that ensure fault-free fan operation even under conditions of smoke at extremely high temperatures
- Vibration-proof, shock-resistant and earthquake-resistant motors
- Motors for deserts – specially designed for heat, dust and sand storms
- Low-temperature drives for drive tasks in polar climates

LOHER CHEMSTAR and LOHER VARIO

LOHER CHEMSTAR and LOHER VARIO motors cover all common types of protection with outputs ranging from 0.25 to 1400 kW. The standard degree of protection is IP55. The range of degrees of protection, however, extends as far as IP66. The housing is made of rugged cast-iron or steel. Possible options include reinforced bearings and integrated PTC thermistors. LOHER CHEMSTAR and LOHER VARIO motors are supplied with industry-specific documentation, including ATEX certificates for the chemical and petrochemical industries.

With motors of the LOHER CHEMSTAR series, there is often no need for an anti-condensation heater even under conditions of extremely high humidity. The motors operate reliably in a temperature range from -55 to +70 °C, even in zones with dust and gas. The motors can therefore also be used in desert and polar regions. Versions with corrosion-resistant stainless steel screws are available. Shaft seals in IP55 degree of protection are available as standard and provide protection against water and dust to ensure problem-free outdoor installation.

Versions in industry-specific design are possible, for example with a high-quality, particularly chemical-resistant finish or galvanized fan covers for corrosion protection in aggressive atmospheres.

Special solutions exclusively for special cases

Subsea components

The subsea motors are developed especially for operation on the seabed. They operate smoothly at depths of 1000 m. They are used as drives for pumps, multi-phase pumps and compressors and therefore play an important role in the optimum exploitation of oil and gas fields.

Platform drives

Compliance with extremely stringent standards is necessary here with regard to the requirements for the operation of drive systems on drilling platforms. The platform motors satisfy the requirements of these standards, both in general terms of reliability, monitoring equipment and integration in platform-wide monitoring systems, as well as in specific applications for example with requirements such as ice protection for polar regions. The platform motors generally feature a special offshore paint finish for protection against salty sea air. Bolts and other exposed parts are made of stainless steel.

Introduction

LOHER motors

1

Customized and industry-specific drive solutions in the process industry

Application (continued)

Integrated pump drives

In the chemical industry, special motors are used that are integrated into pumps. They operate reliably even under extreme conditions of temperature and pressure. In this industry, temperatures can range from -50 to +400 °C and system pressures can be as high as 1200 bar.

Design

The motors described in this catalog are surface-cooled, low-voltage motors designed for the highest demands on availability and reliability. The motors are extremely rugged and reliable and are available as standard versions without explosion protection, as well as in the Ex nA, Ex d(e), Ex p and Ex e types of protection. For extreme requirements, motors are available with double protection against gas and dust.

The highly efficient motors cover the output range of 0.25 to 1400 kW in 2 to 16-pole versions (higher outputs are possible on request) and, in compliance with IEC 60034-30, they achieve efficiency class IE2 in the output range 0.75 to 375 kW in 2-, 4- and 6-pole versions, and they are available for 50 Hz and 60 Hz.

The LOHER CHEMSTAR and SIMOTICS XP motor series are self-ventilated, surface-cooled finned motors for mains-fed and converter-fed operation.

The LOHER VARIO series, which is also surface-cooled, is characterized by its special internal air circulation / hollow fin technology for an extremely high power density with a very high degree of efficiency.

Overview

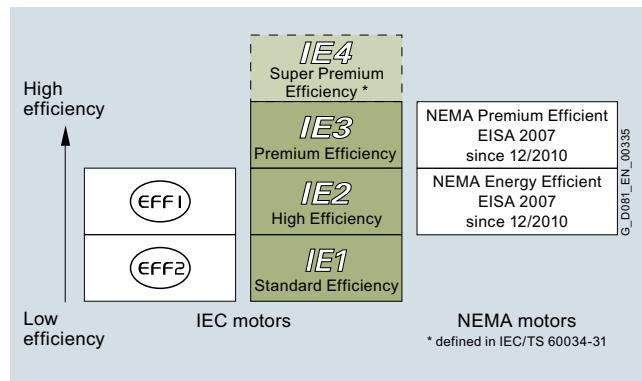

Standardization of the efficiency classes

Different energy efficiency standards exist worldwide for induction motors. To promote international standardization, the international standard IEC 60034-30:2008 (Rotating electrical machines – Part 30: Efficiency classes of single-speed, three-phase, cage-induction motors (IE code)) was created. This groups low-voltage induction motors into new efficiency classes (valid since October 2008). The efficiencies of IEC 60034-30:2008 are based on losses determined in accordance with the IEC 60034-2-1:2007 standard. This has been valid since November 2007 and replaces standard IEC 60034-2:1996 as of November 2010. The supplementary losses are now measured and no longer added as a percentage.

IE efficiency classes

The efficiency classes are grouped according to the following nomenclature:

- IE1 (Standard Efficiency)
- IE2 (High Efficiency)
- IE3 (Premium Efficiency)
- IE4 (Super Premium Efficiency)

IE efficiency classes depending on the output

Note: All efficiency classes are stated with reference to 50 Hz data (unless specified otherwise).

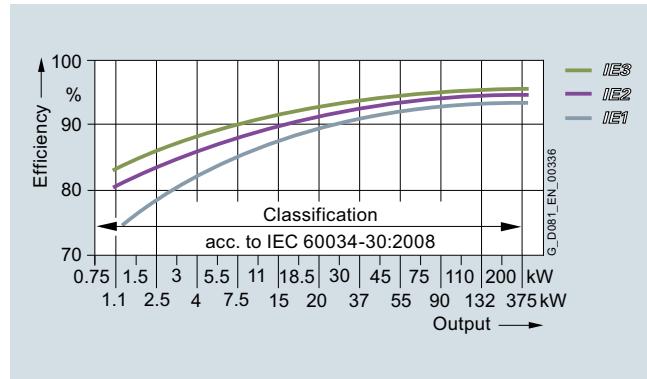

Measuring method according to IEC 60034-2-1:2007 for determining the efficiency

With the measuring method, the supplementary losses are no longer applied as a percentage, but instead they are determined with measurements (IEC 60034-2-1: 2007). The nominal efficiencies are therefore normally reduced from EFF1 to IE2 and from EFF2 to IE1 for technically and physically identical motors.

Previously: $P_{LL} = 0.5\% \text{ of } P_{\text{added}}$

Now: P_{LL} = Individual measurement

P_{LL} = Load dependent supplementary losses

IE1 to IE3 efficiencies 4-pole 50 Hz

The following table shows examples of the efficiency values according to the current and previous loss calculating methods.

	EFF measuring method (incl. percentage losses) EN/IEC 60034-2:1996 50 Hz	Losses determined according to IEC 60034-2-1:2007 50 Hz
5.5 kW 4-pole	89.2 %	87.7 %
45 kW 4-pole	93.9 %	93.1 %

Background information

Comprehensive laws have been introduced in the European Union with the objective of reducing energy consumption and therefore CO₂ emissions. EU Directive 640/2009 concerns the energy consumption or efficiency of induction motors in the industrial environment. This Directive is now in force in every country of the European economic area.

For further details on internationally applicable standards and legal requirements, visit:

www.siemens.com/international-efficiency

The EuP directive (Energy using Products) is implemented in the domestic laws of EU countries. The framework conditions for the European directives have already been agreed. The EU directive 2005/32/EC (=EuP directive) is based, regarding minimum efficiencies, on IEC 60034-30:2008. This directive has been implemented in Germany by means of the so-called "Energiebetriebene-Produkte-Gesetz (EBPG)" [Energy-using products law]. Low-voltage motors and high-voltage motors are affected by changes to the standard – but only the version for mains-fed operation.

1 Introduction

General information regarding efficiency in accordance with International Efficiency

Efficiency classes and efficiencies according to IEC 60034-30:2008

Overview (continued)

	CEMEP voluntary EU agreement	NEMA	EuP directive based on standard IEC 60034-30:2008
Description	Voluntary agreement between the EU commission and the European sector committee of manufacturers of electrical machines (CEMEP)	The current legislature in USA/CAN/MX also governs efficiencies	The EuP directive must be implemented in national law in all EU countries. Losses are determined and therefore the efficiency is determined in accordance with IEC 60034-2-1:2007
Number of poles	2, 4	2, 4, 6	2, 4, 6
Output range	1.1 ... 90 kW	0.75 ... 150 kW	0.75 ... 375 kW
Level	Standard – EFF3 Improved efficiency – EFF2 Highly efficient – EFF1	NEMA Energy Efficient NEMA Premium Efficient	Standard Efficiency – IE1 High Efficiency – IE2 Premium Efficiency – IE3
Voltage	400 V, 50 Hz	230/460 V, 60 Hz	<1000 V, 50/60 Hz

Motors with brake	NO	YES	In agreement
Geared motors	NO	NO	YES
Ex motors	NO	YES	EuP directive – NO IEC 60034-30 – YES (but explosion protection always has a higher priority)
Validity	Voluntary agreement; will be replaced on implementation of the national measures	Before November 2010 EPACT (IE2) From December 2010 EISA 2007 Premium (IE3) minimum efficiency	IEC 60034-30 standard, valid since October 2008, EuP

Dates on which the changes will come into effect

January 1, 2015

Compliance with the legally required minimum efficiency class IE3 for outputs from 7.5 to 375 kW or, as an alternative, IE2 motor plus frequency converter

January 1, 2017

Compliance with the legally required minimum efficiency class IE3 for outputs from 0.75 to 375 kW or, as an alternative, IE2 motor plus frequency converter

Abbreviations

CEMEP: Comité Européen de Constructeurs de Machines Électriques et d'Électronique de Puissance (European sector committee of manufacturers of electrical machines)

NEMA: National Electrical Manufacturers Association

IEC: International Electrotechnical Commission

IE: International Efficiency

EuP: Energy using Products

Explosion-proof motors also with high efficiency

International standard IEC 60034-30, which has been issued in response to the increasing importance of the subject of energy efficiency, also concerns explosion-proof motors. LOHER has developed some series of explosion-proof motors especially for this purpose in the Ex nA, Ex e and Ex de types of protection in class "IE2". The rating plate is stamped with efficiency class "IE2" and the efficiency values. On expiry of the transition phase, details of the voltage ranges are omitted. Only the rated voltage is specified with the admissible line supply tolerances of $\pm 10\%$.

Overview

Steps for drive selection

Step 1		Orientation and general technical information		
Technical requirements for the motor		Rated frequency and rated voltage	50/60 Hz 3 AC 400/500/690 V	
		Operating mode	Standard duty (continuous duty S1 according to EN 60034-1)	
		Degree of protection or type of explosion protection required	IP..	
		Rated speed (No. of poles)	$n = \dots \text{ rpm}$	
		Rated output	$P = \dots \text{ kW}$	
		Rated torque	$T = P \cdot 9550/n = \dots \text{ Nm}$	
		Type of construction	IM..	
Step 2		Preselection in accordance with the application		
Determination of the installation conditions and definition of the application, if necessary		Ambient temperature	$\leq 40^\circ\text{C}$	$> 40^\circ\text{C}$
		Site altitude	$\leq 1000 \text{ m}$	$> 1000 \text{ m}$
		Factors for derating	None	Determine the factor for derating (for reduction factor, see "Information about electric motor dimensioning")
Cross-reference to other motors		These can be SIMOTICS motors for special requirements and applications or motors to the NEMA standard		
Step 3		Preliminary selection of the motor		
Determination of the range of possible motors		Select the frame size and therefore the possible motors on the basis of the following parameters: cooling method, degree of protection, rated output, rated speed and rated torque range. <u>Note:</u> The standard temperature range of the motors is from -20 to +40 °C.		

Structure of the selection and ordering tables

Output, frame size, temperature class		Operating values at rated output												Article No., add. data				
Table header – Meaning																		
P_{rated} , 50 Hz	P_{rated} , 60 Hz	P_{rated} , 60 Hz	Frame size	n_{rated} , 50 Hz	T_{rated} , 50 Hz	IE class	η_{rated} , 50 Hz, 4/4	η_{rated} , 50 Hz, 3/4	η_{rated} , 50 Hz, 2/4	$\cos\varphi_{\text{rated}}$, 50 Hz, 4/4	I_{rated} , 50 Hz, 400 V	I_{rated} , 50 Hz, 690 V	T_{LR}/T_{rated}	I_{LR}/I_{rated}	T_B/T_{rated}	Article No.	$m_{IM\text{ B3}} J$	
kW	kW	hp	FS	rpm	Nm		%	%	%		A	A				kg	kgm^2	
Rated output at 50 Hz	Rated output at 60 Hz	Rated output at 60 Hz	Frame size	Rated speed at 50 Hz	Rated torque at 50 Hz	Efficiency Class according to IEC 60034-30 standard	Efficiency at 50 Hz 4/4 load	Efficiency at 50 Hz 3/4 load	Efficiency at 50 Hz 2/4 load	Power factor at 50 Hz 4/4 load	Rated current at 400 V, 50 Hz	Rated current at 690 V, 50 Hz	Locked-rotor torque on direct switch-on as a multiple of the rated torque	Locked-rotor current on direct switch-on as a multiple of the rated current	Breakdown torque on direct switch-on as a multiple of the rated torque	Article number	Weight for IM B3 type of construction, approx.	Moment of inertia

Legend:

Primary key
Standard values for all motors
Specially for versions for converter-fed operation

Note on pole-changing motors:

The operating values are specified here for the rated output for the 2 or 3 different pole numbers.

Step 4		Detailed selection of the motors in the selection and ordering data tables													
Determination of the basic Article No. of the motor		Determine the motor Article No. according to the following parameters: rated output, rated speed, rated torque and rated current from the "Selection and ordering data" for the motors that have already been identified as possibilities.													
Step 5		Selection of the special versions or options													
Completing the motor Article No.		Determine special versions and the associated order codes (e.g. special voltages and types of construction, motor protection and degrees of protection, windings and insulation, colors and paint finish, mountings and mounting technology, etc.).													
Step 6		Additional information for motor selection													
Checking the required measurements		The dimensions are specified in each catalog section under the paragraph of "Dimensions".													
Selection of the frequency converter, if required		Article No. of the converter as well as its selection, see Catalogs D 11, D 11.1, D 18.1, D 21.3, D 31 and DA 51.2.

Guide to selecting and ordering the motors

1

Article number code

Overview

The Article No. consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

1PS5070-0BD10-4AA0-Z

A15

The first block (positions 1 to 7) identifies the motor type complete with shaft height and overall length; the second block (positions 8 to 12) defines the insulation, machine type, stator frame and voltage/connection/frequency; and in the third block (positions 13 to 16) the temperature class, number of poles, bearing type and product version are encoded.

Structure of the Article No.:

Motors with explosion protection 1PS1, 1PS4, 1PS5, 1MD5 and motors without explosion protection 1PS0

		Position: 1 2 3 4 5 6 7 - 8 9 10 11 12 - 13 14 15 16
Positions 1 to 3: Digit, letter, letter, digit	Motor series LOHER CHEMSTAR, LOHER VARIO	1 P S
Position 4 Digit	Type of protection • Without explosion protection • "Non-sparking" Ex nA version • "Explosion-proof enclosure" Ex de IIB/Ex d IIB • "Explosion-proof enclosure" Ex de IIC/Ex d IIC	0 1 4 5
Positions 1 to 3: Digit, letter, letter, digit	Motor series SIMOTICS XP	1 M D
Position 4 Digit	Type of protection "Explosion-proof enclosure" Ex de IIC/Ex d IIC	5
Positions 5 and 6 Digits	Frame size (FS) 07: FS 71; 08: FS 80; 09: FS 90; 10: FS 100; 11: FS 112; 13: FS 132; 20: FS 200; 22: FS 225; 25: FS 250; 28: FS 280; 16: FS 160; 18: FS 180; 31: FS 315; 35: FS 355; 40: FS 400; 45: FS 450; 56: FS 560	0 7 ... 5 6
Position 7 Digit	Output identifier (encoded) Length + output levels	0 ... 9
Position 8 Digit	Insulation 0: Low-voltage, mains-fed operation; 1: Low-voltage, converter-fed operation, standard insulation; 2: Low-voltage, converter-fed operation, special insulation; 3: Low-voltage, mains-fed operation, pre-formed coil; 4: Low-voltage, converter-fed operation, pre-formed coil	0 ... 4
Position 9 Letter	Type of machine B: Induction motor, squirrel-cage rotor, enclosed machine; F: Asynchronous generator, squirrel-cage rotor, enclosed machine; N: Induction motor, pole-changing, fan design; R: Induction motor with built-on brake	B ... R
Position 10 Letter	Housing and cooling D: Cast-iron, TEFC (self-ventilated); F: Cast-iron, TEFV (forced-air cooled) F: Steel, TEFC (self-ventilated); J: Steel, TEFV (forced-air cooled)	D ... J
Position 11 Digit	Voltage, circuit and frequency 0: 690 VΔ, 50 Hz; 1: 230/400 VΔ/Y, 50 Hz; 3: 500 VY, 50 Hz; 4: 400 VΔ, 50 Hz; 5: 500 VΔ, 50 Hz; 6: 400/690 VΔ/Y, 50 Hz; 8: 690 VY, 50 Hz; 9: Other voltages	0 ... 9
Position 12 Digit	Type of construction 0: IM B3; 1: IM B5; 2: IM B34; 3: IM B14; 4: IM V1 with protective cover; 6: IM B35; 8: IM V1 without protective cover (without explosion protection); 9: Other types of construction	0 ... 9
Position 13 Digit	Temperature class 0: Without temperature class; 3: Temperature class T3; 4: Temperature class T4	0 ... 4
Position 14 Letter	No. of poles A: 2-pole; B: 4-pole; C: 6-pole; D: 8-pole; E: 10-pole; F: 12-pole; G: 14-pole; H: 16-pole; N: 4-/2-pole; P: 6-/4-pole; Q: 8-/4-pole; R: 8-/6-pole; S: 8-/6-/4-pole	A ... S
Position 15 Letter	Bearing type/rotor type A: Roller bearing/standard rotor; B: Roller bearing/special rotor	A B
Position 16 Digit	Product version 0: Finned housing; 1: Cast-ingot housing (1MD5...1); 2: Finned housing IE2 design 3: Cast-ingot housing (1PS5...3)	0 ... 3

Overview

Tests, test bay

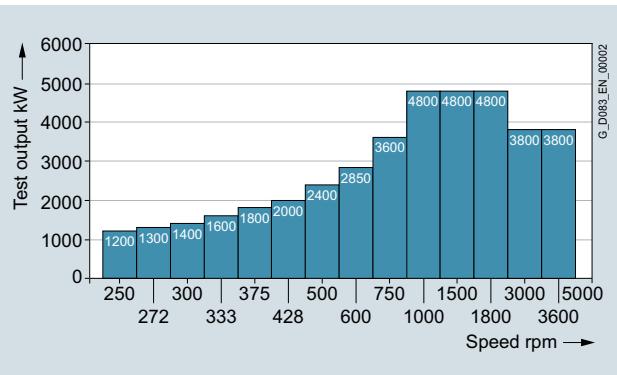

The Siemens Ruhstorf site is equipped with an ultra-modern test bay to enable it to fulfill the stringent requirements of the chemical industry and the oil and gas sector. The quality and reliability of the tests is also confirmed, for example, by the certification authorities for Ex motors. The in-house motor test bays are equipped for testing the complete range of options of the 1PS and 1MD5 motor series in accordance with the latest standards and regulations. Each motor is subjected to a short routine test prior to delivery. Type testing, warm-up runs and special tests are possible. The testing capacities are subdivided into two test units according to motor output. The output classification is shown in the following diagrams.

Tests are organized on the site ranging from acceptance tests in the presence of the customer through to system acceptance tests with supply equipment such as transformers and converters. Special tests are possible on request in accordance with customer specifications or standard tests such as API compliance. In our submersion tanks, motors to IP68 can be submerged in water and tested under load conditions.

Noise measurements are performed on request in a soundproof room. Under normal circumstances, noise measurements are performed under no-load conditions. On request, the measurements can also be taken under load conditions. So-called "hold points" can be agreed in addition to the possibilities offered by the test environments. These "hold points" are time points in which semi-finished/finished motor parts are tested in accordance with requirements. These tests are performed at the installed test sections of the production facility or, if necessary, in the test bays.

General technical specifications

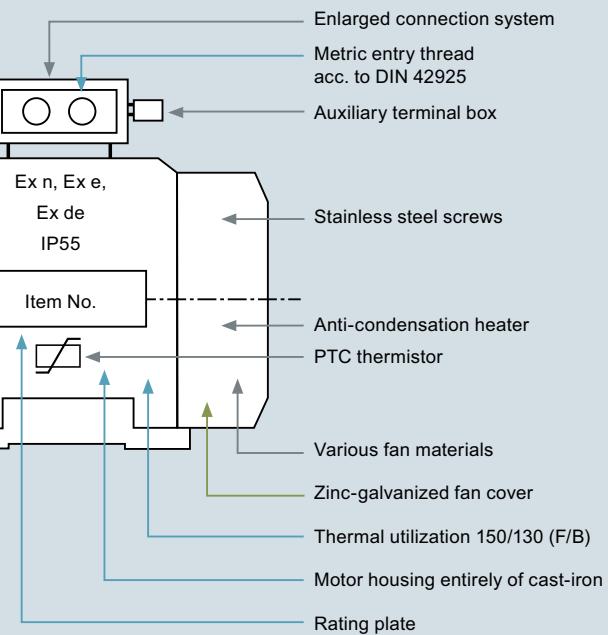

Cut-away diagram of a LOHER CHEMSTAR low-voltage motor

Overview

LOHER CHEMSTAR motors, standard version

- Terminal box, top, rotatable 4 × 90°
- RAL color variants
- Stamped and certified for converter-fed operation
- SPM nipple in FS 132 and above
- Reinforced bearings
- Vibration severity level A
- Shaft seal up to IP66
- Permanent lubrication up to and incl. frame size 280
- Regreasing device in frame size 160 and above
- Paint finish N14A highly resistant to chemicals
- Ambient temperature from -55 to +70 °C
- VIK design

LOHER CHEMSTAR motors with option W09

LOHER CHEMSTAR motors, standard version

- Vibration severity level A
- Permanent lubrication up to and incl. frame size 280
- Terminal box, top, rotatable 4 × 90°
- Metric entry thread according to DIN 42925
- Thermal utilization 155/130 (F/B)
- Motor housing entirely of cast-iron
- RAL color variants
- Rating plate

LOHER CHEMSTAR motors with W09 option package for applications in the chemical and petrochemical industry

- VIK design
- Vibration severity values such as level B
- IP56 degree of protection for motor
- IP66 for shaft seal
- Zinc-galvanized fan cover
- Paint finish N14A highly resistant to chemicals

Other options (with and without W09)

The packing weights for standard motors are not binding.

Weights may vary for special versions and components specially built onto the motor.

Special packaging is possible, e.g. wooden crate for outdoor storage or long-term storage.

Special packaging materials are possible on request, e.g. IPPC heat-treated wood with certificate for China, or with Sirex certificate.

Pallets for Germany are EURO pallets.

Pallets for export are non-returnable pallets.

¹⁾ On pallet (more than one motor is possible on one pallet).²⁾ Attached to pallet (more than one motor is possible on one pallet).³⁾ Packaging can be transported with forklift trucks, in plywood crate for sea freight several motors may be possible per packing unit.

1 Introduction

General technical specifications

Designs in accordance with standards and specifications

Overview

Quality assurance

Orders for electrical machines are processed throughout, from the quotation through to delivery, on the basis of a recognized quality assurance system that fulfills the requirements of the following quality standards:

- DIN EN ISO 9001
- EN 29001

LOHER is certified in accordance with Directive 94/9/EC:
PTB 99 ATEX Q 003

For this certificate, an application for an extension of 3 years is submitted before the validity of the current certificate expires.

CE marking

The motors bear the CE mark in accordance with the following guidelines:

- Guideline 2006/95/EC (Low-Voltage Directive) supersedes 93/68/EEC and 73/23/EEC
- Directive 94/9/EC

Applicable standards and specifications

The motors comply with the appropriate standards and regulations, especially those listed in the table below.

Title	EN	IEC
Rotating electrical machines – Rating and performance	EN 60034-1	IEC 60034-1 IEC 60085
Rotating electrical machines – Standard methods for determining losses and efficiency from tests	EN 60034-2-1	IEC 60034-2-1

Rotating electrical machines – Methods of cooling (IC code)	EN 60034-6	IEC 60034-6
Rotating electrical machines – Classification of types of construction, mounting arrangements and terminal box position (IM code)	EN 60034-7	IEC 60034-7
Rotating electrical machines – Terminal markings and direction of rotation	EN 60034-8	IEC 60034-8
Rotating electrical machines – Noise limits	EN 60034-9	IEC 60034-9
Acoustics: Test code for the measurement of airborne noise emitted by rotating electrical machines	EN ISO 1680	–
Thermal protection	–	IEC 60034-11
Starting performance of single-speed three-phase cage induction motors	EN 60034-12	IEC 60034-12
Mechanical vibration of certain machines with shaft heights 56 mm and higher – Measurement, evaluation and limits of vibrations severity	EN 60034-14	IEC 60034-14
CENELEC standard voltages	–	IEC 60038
General purpose three-phase induction motors having standard dimensions and outputs – Frame numbers 56 to 315 and flange numbers 65 to 740	EN 50347	IEC 60072-1 ¹⁾
Center holes with thread	EN 332	–
Drive type fastenings without taper action; parallel keys, keyways, deep pattern	EN 6885-1	–
In addition, the following applies to Ex motors:		
Explosive atmospheres – Electrical installations design, selection and erection	EN 60079-14	IEC 60079-14
Explosive atmospheres – Equipment protection by type of protection "n"	EN 60079-15	IEC 60079-15
Explosive atmospheres – Equipment protection by explosion-proof enclosures "d"	EN 60079-1	IEC 60079-1
Explosive atmospheres – Equipment dust ignition protection by enclosure "t"	EN 60079-31	IEC 60079-31
Explosive atmospheres – Equipment – General requirements	EN 60079-0	IEC 60079-0
Explosive atmospheres – Equipment protection by increased safety "e"	EN 60079-7	IEC 60079-7
Explosive atmospheres – Equipment protection by intrinsic safety "i"	EN 60079-11	IEC 60079-11

¹⁾ IEC 60072-1 specifies dimensions only, there is no assignment of outputs.
More than one motor is possible per packing unit.

Overview (continued)***The following applies to explosion-proof motors:***

Since the requirements of explosion-proof motors comply with the European standards EN 60079-0, EN 60079-15, EN 60079-31 and Directive 94/9/EC (ATEX 95), the certificates issued by authorized testing agencies (PTB, DEKRA EXAM, etc.) are accepted by all member states of the EU. The remaining members of CENELEC, Switzerland in particular, also accept the certificates.

Certifications

Product certifications are to be differentiated in terms of safety-related certificates and efficiency certificates. Since 2011, it has been obligatory for low-voltage motors with outputs in the range of 0.75 to 375 kW (2, 4 and 6-pole) to be classified in accordance with the IEC 60034-30 efficiency standard and to be marked with the corresponding IE code (International Efficiency IE1, IE2 or IE3). The efficiency is determined using the summed losses method in accordance with IEC 60034-2-1.

Energy-saving motors for the European Economic Area in accordance with EU Directive 640/2009

Since June 2011, all low-voltage motors that fall within the scope of the EU directive must fulfill the specifications of international efficiency class IE2.

- Line voltage \leq 1000 V
- Line frequency 50 or 50/60 Hz
- Output range 0.75 to 375 kW
- Pole number 2, 4 and 6-pole
- Continuous duty S1

In January 2015, the efficiency requirements for motors within the 7.5 to 375 kW range increased to IE3, otherwise IE2 motors must be converter-fed.

This will also apply from January 2017 for 0.75 to < 7.5 kW motors.

Introduction

General technical specifications

1

Motor protection

Overview

In the standard version, the motor is designed without motor protection. The order variants for motor protection are coded by means of the selected options.

A distinction is made between current dependent and motor temperature dependent protection devices.

Current dependent protection devices

Fuses are only used to protect mains cables in the event of a short-circuit. They are not suitable for overload protection of the motor.

The motors are usually protected by thermally delayed overload protection devices (circuit breakers for motor protection or overload relays). This protection is current dependent and is particularly effective in the case of a locked rotor.

For standard duty with short start-up times and starting currents not too excessive and for low numbers of switching operations, motor protection switches provide adequate protection.

Motor protection switches are not suitable for heavy starting duty or large numbers of switching operations. Differences in the thermal time constants for the protection equipment and the motor result in unnecessary early tripping when the protection switch is set to rated current.

Motor temperature dependent protection devices

Temperature detectors installed in the motor winding are suitable protection devices in the case of slowly rising motor temperature.

The most comprehensive protection against thermal overloading of the motor is provided by PTC thermistors (thermistor motor protection) installed in the motor winding. The temperature of the winding can be accurately monitored thanks to its low heating capacity and the excellent heat contact with the winding. When a limit temperature is reached (rated tripping temperature), the PTC thermistors undergo a step change in resistance. This is evaluated by a tripping unit and can be used to open auxiliary circuits. The PTC thermistors themselves cannot be subjected to high currents and voltages. This would result in destruction of the semiconductor. The switching hysteresis of the PTC thermistor and tripping unit is low, which supports fast restarting of the drive. Motors with this type of protection are recommended for heavy duty starting, switching duty, extreme changes in load, high ambient temperatures or fluctuating supply systems.

Option A11

Motor protection with PTC thermistors with 3 embedded temperature sensors for tripping. In the terminal box, 2 auxiliary terminals are required.

Two sets of three temperature sensors are used if a warning is required before the motor is shut down (tripped). The warning is normally set to 10 K below the tripping temperature.

Option A12

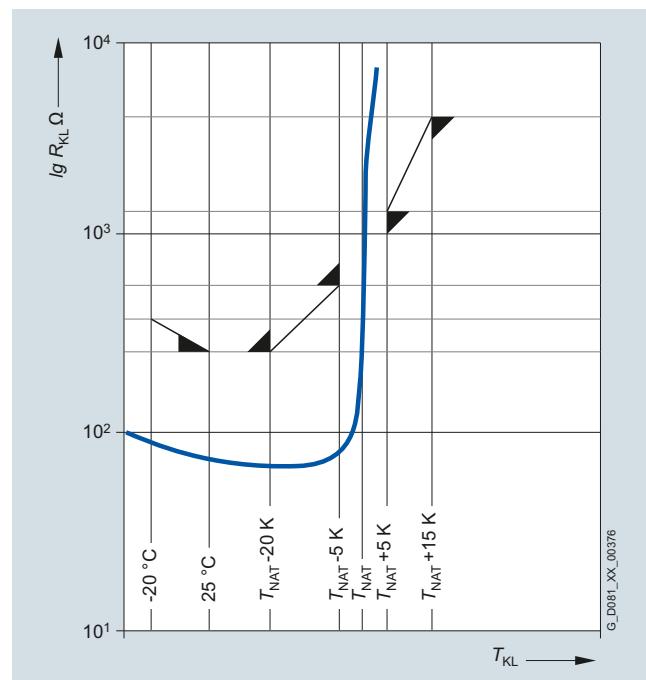

Motor protection through PTC thermistor with 6 embedded temperature sensors for warning and tripping. In the terminal box, 4 auxiliary terminals are required.

In order to achieve full thermal protection it is necessary to combine a thermally delayed overcurrent release and a PTC thermistor. For full motor protection implemented only with PTC thermistors, please inquire.

Motor temperature detection with converter operation

PTC sensor

The PTC thermistor is a temperature dependent component. In the region of the rated response temperature, the resistance of the PTC increases very steeply.

PTC sensor characteristic

Option A15 or A16

For motors designed with explosion protection, the PTC sensors must be tested in the installed state for correct operation (TMS tests). For this test, the stator winding is heated to the tripping temperature. The option of a PTC sensor including TMS test can be ordered using Option **A15** (3 PTCs for trip) and **A16** (6 PTCs for alarm and trip).

Overview**Standard voltages and tolerances**

The motors listed in this catalog are supplied with a fixed voltage (e.g. 400 V). The tolerance band for rated voltage is $\pm 10\%$. This tolerance is in compliance with the standard and is not stamped on the rating plate. The tolerance band for frequency is $\pm 2\%$.

The motors of the LOHER CHEMSTAR and LOHER VARIO series can be designed without explosion protection and for Ex zones with a non-standard winding for almost any frequency and any required line voltage up to 1000 V. The operating data listed in the output tables applies to the rated voltages specified with tolerance bands according to EN 60034-1.

EN 60034-1 differentiates between Category A (sum of voltage deviation and frequency deviation $\pm 5\%$) and Category B (sum of voltage deviation and frequency deviation $\pm 10\%$) for voltage and frequency fluctuations.

The motors can supply their rated torque in both Category A and Category B.

Tolerance range A (voltage $\pm 5\%$):

Motor must be functionally stable in continuous duty. The temperature rise is permitted to be 10 K higher than the limit value.

Tolerance range B (voltage $\pm 10\%$):

The motor must be functionally stable and is permitted to exhibit wide variations in characteristic data; operation over long periods close to the limits of Category B is not recommended.

Standard	Range	Range
EN 60034-1	A	B
Voltage deviation	$\pm 5\%$	$\pm 10\%$
Frequency deviation	$\pm 2\%$	$+3\%/-5\%$
Rating plate data stamped with rated voltage a (e.g. 230 V)	a $\pm 5\%$ (e.g. 230 V $\pm 5\%$)	a $\pm 10\%$ (e.g. 230 V $\pm 10\%$)

Rated current

In some output tables, the rated currents are only specified at a rated voltage of 400 V. At other voltages, the rated currents vary in accordance with the inverse of the voltage:

$$\frac{U}{U'} = \frac{I'}{I}$$

This means:

$$I' = \frac{U \cdot I}{U'}$$

Example:

According to the output table, the pole-changing motor ANGA-180MB-42 has a rated current of 31/37 A at 400 V. The rated current at 230 V is therefore:

$$I' = \frac{400 \cdot 31 \text{ or } 37}{230} = 54/64 \text{ A}$$

Tolerances for electrical values in the output tables

The following tolerances apply to the electrical values listed in the output tables according to EN 60034-1:

Efficiency	$\leq 150 \text{ kW}: -0.15 (1 - \eta)$ $> 150 \text{ kW}: -0.1 (1 - \eta)$
Power factor	$- \frac{1 - \cos \varphi}{6}$ (minimum 0.02, maximum 0.07)
Tightening torque	-15 % and +25 %
Breakdown torque	-10 %
Locked-rotor current	+20 % (no lower limit)
Slip at rated load and operating temperature	$\geq 1 \text{ kW} \pm 20\% \text{ of the guaranteed slip}$ $< 1 \text{ kW} \pm 30\% \text{ of the guaranteed slip}$

1 Introduction

General technical specifications

1

Outputs and operating modes

Overview

The outputs specified in the output tables are valid for duty type S1 (continuous duty at constant load) in accordance with EN 60034-1. For duty types S4, S5, S7 and S8 in addition to the values for cyclic duration factor and switching frequency, the moment of inertia of the motor (J_M) and driven machine (J_{ext}) must also be stamped. All moments of inertia must be referred to the motor speed. EN 60034-1 categorizes the groups of duty types as follows:

1. Duty types in which starting and electrical braking do not affect the overtemperature of the stator winding of the motor:

S2: Short-time duty

Operating times of 10, 30, 60, and 90 minutes are recommended. After each period of duty the motor remains at zero current until the winding has cooled down to the coolant temperature.

S3: Intermittent duty without the influence of starting on the temperature.

Unless specified otherwise, the duty cycle time is 10 minutes. Values of 15, 25, 40, and 60 % are recommended for the cyclic duration factor.

S6: Continuous duty with intermittent load.

Unless specified otherwise, the duty cycle time is 10 minutes. Values of 15, 25, 40, and 60 % are recommended for the cyclic duration factor.

2. Duty types in which starting and braking have a corresponding effect on the overtemperature of the stator winding and the rotor cage:

S4: Intermittent duty with the influence of starting on the temperature – switching cycles per hour (c/h) refers to starting cycles.

S5: Intermittent duty with the influence of starting and braking on the temperature – switching cycles per hour (c/h) refers to starting and braking cycles.

S7: Continuous duty with starting and braking – the load during the operating period must be known.

S8: Continuous duty with pole changing – the load during the operating period must be known.

S9: Continuous duty with non-periodic load and speed changes (converter-fed operation)

S10: Duty with discrete constant loads.

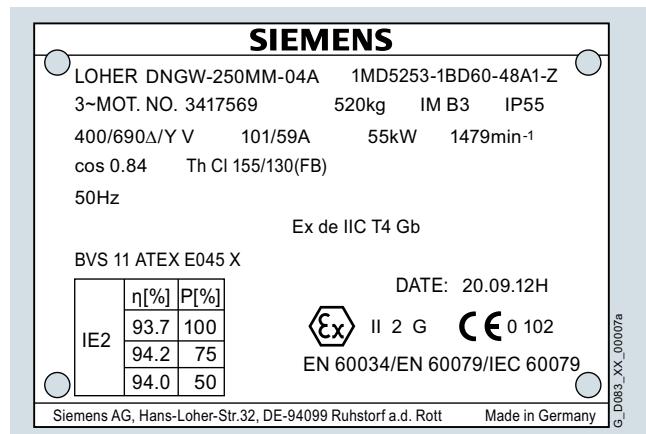

Most of the intermittent operating conditions occurring in practice are a combination of the duty types listed under 1. and 2. All of the operating conditions must be known in order to precisely determine a suitable motor.

Rating plate and extra rating plates

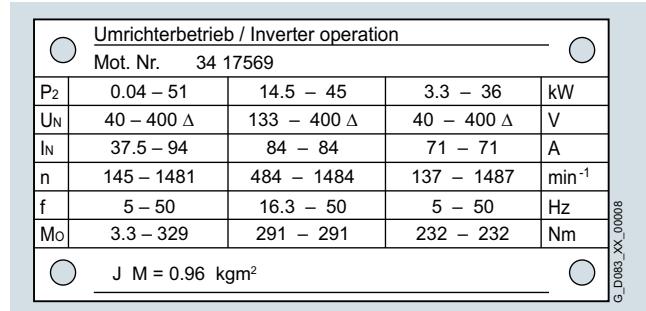

Overview

Due to IE changeover, the affected motors will be equipped with new rating plates complete with modified technical data. There is no requirement to specify a voltage range. Only the rated voltages are specified. Unless specified otherwise, a voltage tolerance of up to $\pm 10\%$ acc. to EN 60034-1 Range B applies.

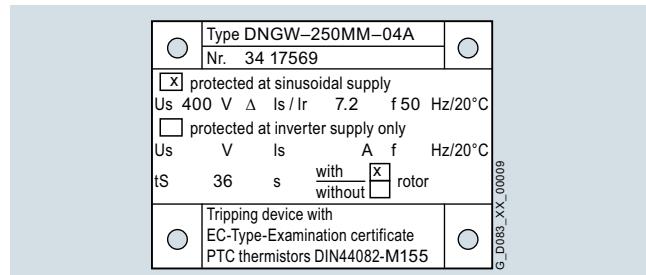

Note: The transition phase for harmonization of line voltages with increased tolerance within the EU expired on January 1, 2008. Since then the admissible mains tolerances are 230/400 V $\pm 10\%$, 50 Hz and 400/690 V $\pm 10\%$, 50 Hz. In general, the country of manufacture only is specified. The designation "D-94099 Ruhstorf" is omitted with the exception of explosion-proof motors.

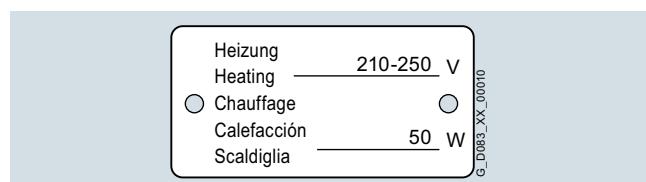

Main rating plate: Mains-fed operation

Rating plate: Converter-fed operation

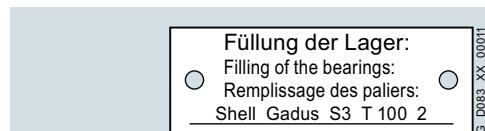

Extra rating plate: PTC thermistor for sole protection, mains or converter-fed operation

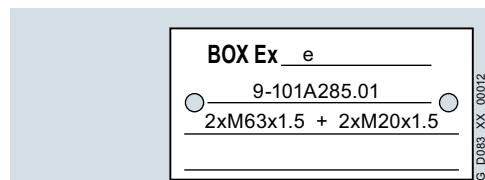

Extra rating plate: Anti-condensation heater

New, according to EuP:

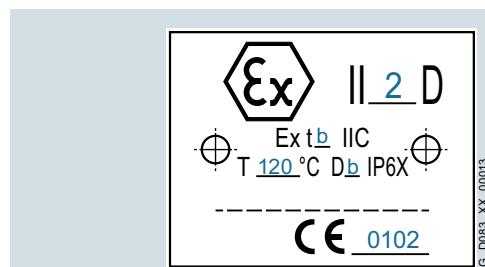

- Efficiency classes IE1, IE2, IE3 according to IEC 60034-30
- Specification of the nominal efficiencies according to IEC 60034-30:2008 and the rated current with the rating plate values or list values of power factor and efficiency (IEC 60034-30:2008 does not include any details regarding current)
- No separate specification of the rated voltage range

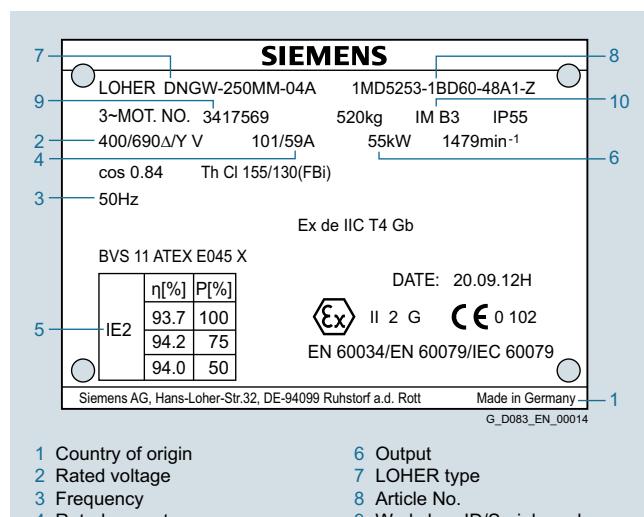

Extra rating plate: Bearing grease

Extra rating plate: Ex marking for terminal box

Extra rating plate: Dust Ex protection

- 1 Country of origin 6 Output
2 Rated voltage 7 LOHER type
3 Frequency 8 Article No.
4 Rated current 9 Workshop ID/Serial number
5 IE efficiency class and standard rated efficiency at 1/2, 3/4 and 4/4 load 10 Type of construction

Main rating plate: Mains-fed operation with legend

1 Introduction

General technical specifications

Efficiency, power factor, rated torque, rated speed / insulation and winding

Overview

Efficiency and power factor

The efficiency η and power factor $\cos\phi$ for each rated output are listed in the selection tables in the individual sections of this catalog.

Rated speed and direction of rotation

The rated speeds are applicable for the rated data. The synchronous speed changes proportionally with the line frequency. The motors are suitable for clockwise and counter-clockwise rotation.

If U1, V1, W1 are connected to L1, L2, L3, clockwise rotation results as viewed onto the drive-end shaft extension. Counter-clockwise rotation is achieved by swapping two phases (see also "Heating and ventilation" on Page 1/27).

Rated torque

The rated torque in Nm delivered at the motor shaft is

$$T = \frac{9.55 \cdot P \cdot 1000}{n}$$

P Rated output in kW
n Speed in rpm

If the voltage deviates from its rated value within the admissible limits, the locked-rotor torque, the pull-up torque and the breakdown torque vary with the approximate square of the value, but the locked-rotor current varies approximately linearly.

In the case of squirrel-cage motors, the locked-rotor torque and breakdown torque are listed in the selection tables as multiples of the rated torque.

Overview

High-grade enameled wires, suitable insulating sheet materials, and the type of impregnation (current UV or vacuum method) form insulation systems for the motor windings that ensure a high level of mechanical and electrical strength as well as good serviceability and a long service life. The insulation system is suitable for rated voltages up to 1000 V. These insulation systems protect the winding to a large degree against the effects of aggressive gases, vapors, dust and oil. They resist the stress of normal climates in accordance with EN 60721-3 and are suitable for use in tropical climates. In the case of a damp alternation climate, which also occurs in various tropical zones, the special version for increased humidity protection is required.

Silicone rubber encapsulation

Silicone rubber encapsulation is recommended in the following cases irrespective of the temperature class of the winding:

- When there is a heightened risk of condensation forming due to the type of drive or application of the motor.
- If deposits of highly conductive dust on the winding heads need to be prevented.

Encapsulation offers particular advantages in combination with temperature classes F and H for the following requirements:

- Motors with high switching frequencies
- Motors for particularly difficult starting and braking conditions
- Motors with increased mechanical short-circuit strength of the winding

Overview**Anti-condensation heater**

The motors can be equipped with anti-condensation heaters to protect them against internal condensation. The standard supply voltages are listed in the table below. Other supply voltages are possible on request. Anti-condensation heaters must not be switched on during operation.

Anti-condensation heaters for 1PS1 motors in the type of protection "Non-sparking" are supplied with a self-limiter. The heater output is listed in the adjacent table.

Alternatively, a voltage of between 5 and 10 % of the rated motor voltage can be connected to terminals U1 and V1 (1-phase) which will heat the stator winding sufficiently.

Frame size	Supply voltage V	Heater output per motor 1PS0, 1PS4, 1PS5 W	1PS1 W

355	1.5	160	1.5	80	1.0	45	0.8	25
LOHER VARIO motors								
400	1.8	200	1.8	100	1.4	60	1.1	30
450	2.2	200	2	150	1.8	80	1.4	40
500	2.9	200	3	150	2.5	100	2.4	50

If motors are equipped with forced ventilation, pipes for infeed or extraction of air, silencers, or similar, the values listed above must be complied with depending on frame size.

They must also be used to calculate the static back pressure of piping.

The values for static back pressure in Pa (1 Pascal = 0.102 mm WS) are maximum values that must not be exceeded on self-ventilation and with the specified cooling air flow in pipes, silencers, or similar.

General technical specifications

1

Types of construction

Overview

Installation of rotating electrical machines according to EN 60034-7

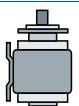

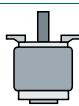

The most common types of construction are shown in the table. It can be seen from the option lists for which frame size range the individual types of construction are supplied. Other types of construction are available on request. The type of construction is specified on the rating plate in accordance with Code I, EN 60034-7, according to the type of construction ordered and also appears as code letters in the type designation. This is not the case with motor versions whose type of construction has not been standardized according to Code I. In such cases, the type of construction is specified in accordance with Code II. Standard motors, that is frame sizes 90 to 315 M, that are ordered in the basic (universal) types of construction IM B3, IM B5 or IM B14, can also be operated in other mounting positions as follows:

IM B3 in IM B6, IM B7, IM B8, IM V5 or IM V6,
IM B5 in IM V1 or IM V3,
IM B14 in IM V18 or IM V19.

For motors up to frame size 180 (standard version without condensation drain), this applies without constraints. With frame size 200 and above, it is important that the motors are installed with the condensation drainage holes at the lowest point. The mains connection of the motors is suitable for all types of construction due to the ability to rotate the terminal box by 90°. The motors in the version "without explosion protection" for vertical installation with the shaft extension pointing downwards are supplied without a protective cover over the fan cover, unless specified otherwise.

Flange designations

In accordance with EN 50347 or IEC 60072-1, the mounting flanges are designated according to the nominal dimension of the hole diameter. Their assignment to frame sizes can be obtained from the dimensional drawings.

Flange with through holes, e.g. IM B5 EN 50347:
FF100, FF115, FF130, FF165, FF215, FF265, FF300, FF350,
FF400, FF500, FF600, FF740

Flange with tapped holes, e.g. IM B14 EN 50347:
FT65, FT75, FT85, FT100, FT115, FT130, FT165

1 Introduction

General technical specifications

Motor connection and terminal box

Overview

The terminal box housings are made of cast-iron and designed to IP55 degree of protection (to IP56 in the case of LOHER VARIO) in accordance with EN 60034-5. The terminals are therefore protected from touch, dust deposits and water jets from any direction. The terminal boxes for explosion-proof motors correspond to the respective standards.

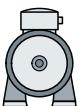

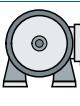

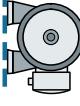

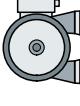

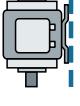

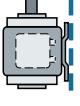

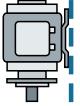

Explosion-proof motors are equipped as standard with terminal boxes in type of protection Ex e in accordance with EN 60079-0 and EN 60079-7. For motors in type of protection "Non-sparking", the terminal boxes are stamped with "Ex nA" in accordance with EN 60079-15. The "Ex nA" terminal box design is identical to that for "Ex e".

The position of the terminal box and cable entries can be obtained from the table below. The terminal boxes can be rotated by 90° which allows the incoming supply cable to be fed in from different sides. For motors in type of protection "explosion-proof enclosure", subsequent rotation of the terminal box for frame sizes 71 and 80 is only permitted to be performed in an authorized specialist workshop.

Monitoring devices or anti-condensation heaters are connected via auxiliary terminals in the terminal box. In frame size 132 and above, the auxiliary terminals can be installed in an auxiliary terminal box that is mounted on the side of the terminal box corresponding to the type of protection of the motor.

Position of the terminal box

Assignment of terminal box position to type of construction

Types of construction	Terminal box position
IM B3/IM B5, IM B3/IM B14 – terminal box on top	
IM B3/IM B5, IM B3/IM B14 – terminal box on side	
IM B6 ¹⁾	
IM B7 ¹⁾	
IM B8 ¹⁾	
IM V1, IM V18	
IM V3, IM V19	
IM V5 ¹⁾	
IM V6 ¹⁾	
IM V15, IM V17 ¹⁾	

¹⁾ For terminal box position on top, the design is as for IM B3/IM B5, IM B3/IM B14 – terminal box on top.

Degrees of protection and mechanical design**Overview****Degrees of protection acc. to EN 60034-5**

Degree of protection	Scope of protection	Protection against water (2nd digit)
IP54	Shock hazard protection and protection against the ingress of foreign bodies (1st digit) Total protection against touching of live parts and against getting near such parts as well as touching of moving parts inside the housing.	Water sprayed from all directions onto the machine must not have a harmful effect.
IP55	Protection against harmful dust deposits: Ingress of dust is not totally prevented, but dust will not penetrate in sufficient quantities for satisfactory operation of the machine to be affected.	A jet of water from a nozzle that is aimed at the machine from all directions does not have a harmful effect.
IP56	Total protection against touching of live parts and against getting near such parts as well as touching of moving parts inside the housing. Protection against ingress of dust (dust tight).	Water due to heavy seas, or water in a powerful jet, will not penetrate the housing in any quantities that may cause damage.
IP65		A jet of water from a nozzle that is aimed at the machine from all directions does not have a harmful effect.

All motors in the standard version correspond to **IP55 degree of protection**. Other degrees of protection are available as an option.

For all types of construction with the shaft extension pointing downwards, a suitable cover that prevents small parts from falling into the fan cover is essential. Exceptions to this rule are cases in which the motor is mounted such that the machine performs the function of the cover. This type of cover must, however, not adversely affect the cooling air flow. Motors that are installed outdoors must be protected against intensive exposure to the sun.

Motors to IP67 degree of protection

Special motor versions can be supplied for installation in plants which can be flooded occasionally, such as pumping stations. They are suitable for temporary submersion at standstill for up to 72 hours in a maximum depth of water of 8 m. During the entire period of submersion, the motor must not be in operation. To ensure that the built-in fan of the motor or the external ventilation is not destroyed, the motor must be switched off before the water level reaches the fan.

Special measures, such as special sealing around the shaft and static joints in accordance with IP67 ensure that no water can enter the motor for the duration of submersion. After connecting the motor, the terminal box must be tightly sealed using the supplied casting resin in accordance with the installation instructions supplied with the motor.

Available types in IP67 degree of protection in frame size 160 and above:

- 1PS0 without explosion protection
- 1PS1 with type of protection Ex nA IIC
- 1PS5 with type of protection Ex de IIC

The technical specifications of the motors can be obtained from the type descriptions.

Additional options that are appropriate for IP67 degree of protection:

- PTC thermistor for winding monitoring
- Paint finish N14
- Stainless steel screws
- Anti-condensation heater
- Built-on level switch
(not included in the scope of supply of the motor)

1 Introduction

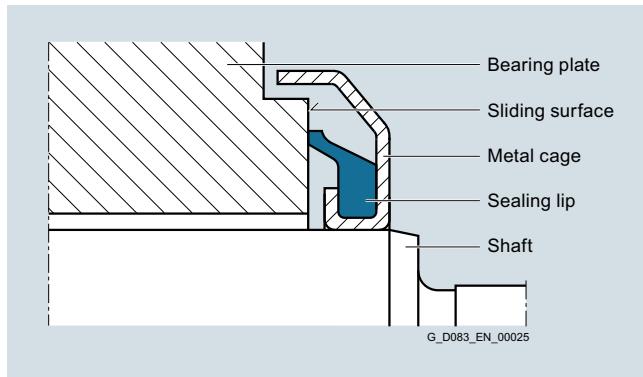

General technical specifications

Degrees of protection and mechanical design

Overview (continued)

IP66 shaft seal (optional)

A shaft seal to IP66 is available as an option for motors of the LOHER CHEMSTAR 1PS series. It comprises an axial ring seal (Gammaring 9RB). The sealing lip slides over a carefully prepared metal surface. The contact pressure reduces as the speed increases. This reduces wear. The metal cage in combination with the housing forms a labyrinth gap which protects the sealing lip from water jets, dust and mechanical damage. This mechanical design prevents deposits of water in the vicinity of the sealing lip.

The shaft seal is suitable for horizontal and vertical motor types of construction. It is particularly suited to outdoor installations, especially V3.

IP66/65 degree of protection has been verified for the seal by DEKRA EXAM. The shaft seal has been successfully implemented under extreme conditions for 30 years.

LOHER VARIO motors are equipped as standard with a contactless, maintenance-free labyrinth sealing system. Degree of protection up to IP66 can be achieved by means of the special version with integrated seals. This sealing system is certified in accordance with the strict requirements for dust explosion-proof motors (Ex t).

Condensation drainage holes

For motors of frame size 180 and below, condensation drainage holes are not provided due to the minimal empty internal space and consequently minimal build-up of condensation. They will only be implemented in response to a special request. Such a request must be clearly stated when placing an order. Motors of frame size 160 and above feature condensation drainage holes as standard.

The location of the condensation drainage holes depends on the type of construction. They are located at the lowest point of the bearing plates. If the drainage holes are not at the lowest point following installation and commissioning of the motor, new holes must be drilled accordingly and the existing holes must be sealed with plugs. For IP55 and IP56 degrees of protection, the condensation drainage holes are sealed. For motors of the 1PS0 type series, the condensation drainage holes are sealed with a plug that is compliant with the degree of protection and which ensures condensation drainage. For motors of the 1PS1 type series, condensation drainage holes are tightly sealed with a bolt. The drilled hole must be opened regularly to allow the accumulated condensation water to drain away.

For the 1PS4, 1PS5 and 1MD5 motor series, condensation drainage holes cannot be implemented, as this would not comply with the type of protection "Explosion-proof enclosure".

In the case of vertical types of construction, the hole in the top bearing plate is sealed with a plug.

Overview

The motors are equipped with deep groove ball bearings at the drive end (DE) and the non-drive end (NDE). For special versions with reinforced bearings, a cylindrical roller bearing is fitted at the DE in some cases.

To fix the rotor in the axial direction, a bearing must be designed as a so-called located bearing. To prevent expansion of the shaft in a warm motor in the direction of the driven machine, the located bearing is installed at the drive end. This does not apply to motors with reinforced bearings (roller bearings). In accordance with the type of construction, the located bearing must be mounted on the NDE fan end. In LOHER VARIO motors of the 1PS0 and 1PS1 type series for vertical installation, the located bearing is also mounted at NDE.

The assignment and designation of bearings are shown in the tables under the heading "Selection of roller bearings".

Bearing shipping brace

Cylindrical roller bearings are sensitive to shock at standstill. This can occur during transportation, or it can be caused after installation by adjacent machines. This results in longitudinal grooves on the inner ring of the roller bearing. To prevent this, all motors with roller bearings are equipped with a special shipping brace. The rotor shaft is totally blocked by tightening several hexagon bolts. This prevents vibration on the moving surface of the bearing from being transferred.

Overview (continued)

Admissible forces on shaft extension

The values apply to the bearings and drive end shaft extensions that are assigned in the following tables based on a calculated service life of $L_{10h} = 20000$ h.

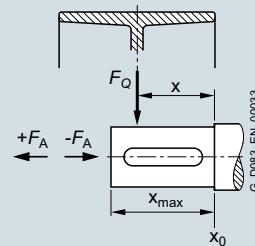

They are applicable for horizontal and vertical shafts.

F_Q = Cantilever force in N

F_A = Axial force in N

x = Distance between point of application of force and shoulder of shaft in mm

l = Length of shaft extension in mm

Admissible cantilever force

1PS0, 1PS1, 1PS4, 1PS5 and 1MD5 motors

Valid are: x_0 values for $x = 0$, $x_{0.5}$ values for $x = 0.5 \cdot l$ and x_{max} values for $x = l$ (l = shaft extension)

Frame size **Admissible cantilever force F_Q**

The specified cantilever forces must not be exceeded to ensure compliance with the maximum admissible shaft flexing in the ignition gap.

Overview (continued)**Admissible axial force**

In the case of exclusively axial loading, the values in the following tables are admissible. The values apply exclusively to the bearings listed below. The data is based on a fatigue life of $L_{10h} = 20000$ h.

The specified values apply to operation at 50 Hz. For a 60 Hz supply, the values must be reduced by 6 % to achieve the same service life.

1PS0, 1PS1, 1PS4, 1PS5 and 1MD5 motors

Introduction

General technical specifications

Bearings

Overview (continued)

Additional axial force with cantilever force on shaft extension

If the shaft extensions are loaded at $x = l$ (l = shaft extension) with the respective admissible cantilever force F_Q , the following additional forces are permitted to occur in the axial direction.

If the admissible cantilever forces are not exploited to the full, higher loads are possible in the axial direction (values on request).

1PS0, 1PS1, 1PS4, 1PS5 and 1MD5 motors

Overview (continued)**Reinforced bearings**

Motors of the 1PS0, 1PS1 1PS5 and 1MD5 type series can be designed with cylindrical roller bearings at DE for higher cantilever forces, e.g. for belt drives. For frame size 160 and above, the motors are equipped with a regreasing device at DE and NDE.

For SIMOTICS XP motors, the version with cylindrical roller bearings at DE and regreasing device at DE and NDE is an alternative to the standard version.

The located bearing is at NDE. A regreasing device for DE and NDE is standard.

¹⁾ For operation at 60 Hz, C4 bearing.

²⁾ For operation at 50 Hz only, please inquire regarding operation at 60 Hz.

Bearings

Overview (continued)

Admissible forces on shaft extension

The following values are based on a calculated service life of $L_{10h} = 20000$ h. They are applicable for horizontal and vertical shafts.

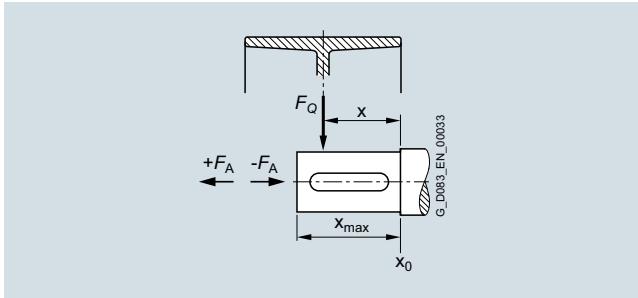

The cantilever forces specified in the tables must not be exceeded to ensure compliance with the maximum admissible shaft flexing in the ignition gap. Where values are not specified in the tables, an increase in admissible force cannot be achieved by using a roller bearing in place of a normal bearing, due to flexing of the shaft.

F_Q = Cantilever force in N

F_A = Axial force in N

x = Distance between point of application of force and shoulder of shaft in mm

l = Length of shaft extension in mm

Admissible cantilever force

Admissible cantilever forces

1PS0, 1PS1, 1PS4, 1PS5 and 1MD5 motors

Valid are: x_0 values for $x = 0$, $x_{0.5}$ values for $x = 0.5 \cdot l$ and x_{max} values for $x = l$ (l = shaft extension)

Overview (continued)**Additional axial force with cantilever force on shaft extension**

If the shaft extensions are loaded at $x = l$ with the respective admissible cantilever force F_Q , the following additional forces are permitted to occur in the axial direction. If the admissible cantilever forces are not exploited to the full, higher loads are possible in the axial direction (values on request).

1PS0, 1PS1, 1PS4, 1PS5 and 1MD5 motors

1 Introduction

General technical specifications

Grease lifetime, relubrication intervals, grease quantities

Overview

Motors of the 1PS and 1MD5 type series up to frame size 280 have permanent lubrication. The grease reservoir is sufficient for several years. Motors of frame size 315 and above are equipped with a regreasing device and grease dosing control. A regreasing system is available for roller bearings as an option (**K40**) for series 1PS and 1MD5 in frame sizes 160 ... 280.

LOHER VARIO 1PS0, 1PS1, 1PS4 and 1PS5 motors						
355 ... 500	Values on request					

The specified regreasing intervals are valid for an ambient temperature of max. 40 °C.

For every 10 °C increase in temperature, the greasing interval is reduced by a factor of 0.7 of the value in the table (max. 20 °C = factor 0.5). Intervals for operation on 60 Hz systems on request.

Special aspects of grease lifetime

For VARIO types in vertical types of construction, angular-contact ball bearings or combined bearings are sometimes installed at NDE. This reduces the grease lifetime for the NDE bearings.

At an ambient temperature of ≤ 25 °C, the grease lifetime can be expected to be doubled. Due to the durability of the grease in years, it is limited to a maximum of 40000 h.

The grease lifetime or regreasing interval must be regarded independently of the mechanical service life of the bearing. In coupling operation with an elastic coupling, for example, the calculated mechanical service life of the bearing is $L_{10h} = 50000$ h. The grease lifetime for permanently lubricated bearings is, however, limited to 40000 h. Regreasing must be performed within the specified intervals.

The intervals for operation on 60 Hz systems are available on request. They can be estimated for higher speeds by means of the following rule.

At speeds above the rated speed on 50 Hz systems, the grease lifetime and regreasing intervals are reduced. With reference to the time t_{f50} at 50 Hz, the reductions are as shown in the table below.

Reduction in grease lifetime of regreasing interval

The specified regreasing intervals are valid for an ambient temperature of max. 40 °C. For every 15 °C increase in temperature, the lubrication interval must be reduced to half of the value in the table.

	Rated frequency				
	60 Hz	70 Hz	80 Hz	90 Hz	100 Hz
t_f/t_{f50}	0.75	0.65	0.55	0.50	0.45

Measuring-surface sound pressure level**Overview**

The table below lists the measuring-surface sound pressure level L_{pfA} as well as the sound power level L_{WA} for motors of the 1PS0 type series without explosion protection and the 1PS4, 1PS5 and 1MD5 type series with the type of protection "Explosion-proof enclosure". The noise values apply to no-load operation at a rated frequency of 50 Hz. The noise measurements are performed according to DIN EN ISO 1680 in a noise measuring chamber under no-load conditions. The tolerance is +3 dB(A). Noise values in converter-fed operation may differ from these values, because the speed can vary and an increase in the noise level can be expected due to the non-sinusoidal voltages and currents.

At 60 Hz, the values for 2-pole motors increase by approximately 5 dB(A), and for 4-pole motors or higher pole numbers by approximately 4 dB(A).

Measuring-surface sound pressure level L_{pfA} and sound power level L_{WA} in no-load operation at fixed voltage for 1PS0, 1PS4, 1PS5 and 1MD5 motors

General technical specifications

Information about electric motor dimensioning

Overview

Output

The rated outputs and operating values specified in the selection tables apply to duty type S1 in accordance with EN 60034-1 at a rated frequency of 50 Hz at rated voltage, a coolant temperature (CT) of up to 40 °C and a site altitude of up to 1000 m above sea level.

The motors can also be used at a coolant temperature of between 40 °C and 60 °C or a site altitude of between 1000 m and 4000 m above sea level. In these cases, the rated output specified in the selection tables must be reduced in accordance with the diagram, or a sufficiently larger motor type or higher temperature class should be selected. If the coolant temperature is reduced at site altitudes of over 1000 m above sea level, there is no need for a reduction in the rating data.

Occasional current overload

In accordance with EN 60034-1, the motors with rated outputs up to 315 kW are designed to withstand 1.5 times the rated current for 2 minutes at operating temperature without adversely affecting the service life. No specifications have been defined for larger motors.

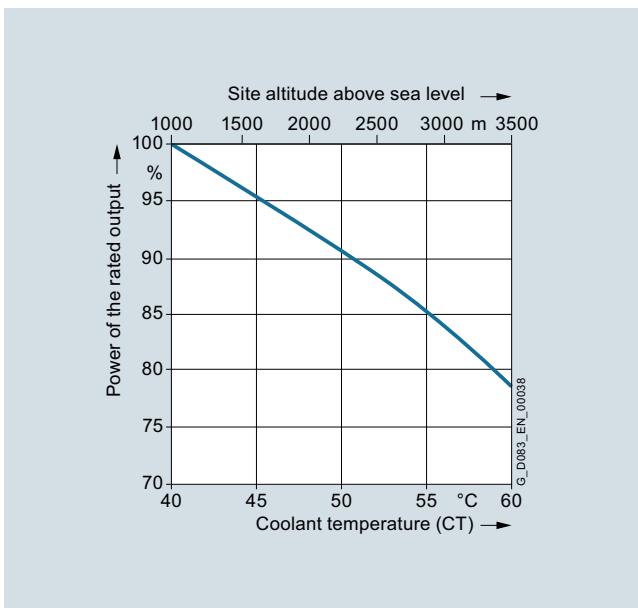

Conversion of output from kW to hp

The output can be converted from kW to hp as follows:

$$1 \text{ kW} = 1.341 \text{ hp}$$

Reduction factors for increased ambient temperature and site altitude:

- The motor output can be approximated in accordance with the following characteristic curve.

- The following derating tables are superordinately applicable for the 1PS motor series in mains-fed operation.
- In converter-fed operation, the derating factor applies in accordance with the curve.

Coolant temperature and site altitudes**Overview****SIMOTICS XP 1MD5 motors**

The rated output specified in the selection tables is applicable for continuous duty in accordance with EN 60034-1 at the frequency of 50 Hz, a coolant temperature (CT) or ambient temperature of 40 °C and a site altitude (SA) up to 1000 m above sea level.

For higher coolant temperatures and/or site altitudes greater than 1000 m above sea level, the specified motor output must be reduced using the factor k_{HT} .

This results in an admissible output of the motor of:

$$P_{adm} = P_{rated} \cdot k_{HT}$$

P_{adm} Admissible motor output in kW

P_{rated} Rated output in kW

k_{HT} Factor for abnormal coolant temperature and/or site altitude

If the admissible motor output is no longer adequate for the drive, it should be checked whether the motor with the next higher rated output fulfills the requirements.

The motors are designed for temperature class 155 (F) and utilized in temperature class 130 (B). Under non-standard operating conditions, if they are to be used in this class, the admissible output must be determined from the tables below.

If the coolant temperature differs from the standard +40 °C, for compliance with explosion protection standards the option **C22** for +45 °C or **C23** for +50 °C must be selected for the applicable coolant temperature. The maximum coolant temperature as well as the reduced output are stamped on the rating plate.

Reduction factor k_{HT} for different site altitudes and/or coolant temperatures

Site altitude above sea level	Coolant temperature		
	40 °C	45 °C	50 °C
1000 m	1.00	0.96	0.92

The coolant temperature is rounded up to the next 5 °C.

LOHER CHEMSTAR

For motors of the LOHER CHEMSTAR series, the outputs or reduced outputs listed in the following tables apply for the specified coolant temperatures and site altitudes for a winding utilization of 130 °C (B). The options specified here must be explicitly ordered. The coolant temperature and output are stamped on the rating plate.

General technical specifications

VIK design

Overview

On request, three-phase motors of the LOHER CHEMSTAR 1PS and SIMOTICS XP 1MD5 series can be designed in accordance with VIK guidelines ("Verband der Industriellen Energie- und Kraftwirtschaft e. V.", the Association of the Industrial Energy and Power Industry). VIK motors have the same output as the motors of this list, but also satisfy the VIK recommendation both mechanically and electrically. The most important points of the minimum design to the VIK recommendation of March 2011 are outlined in the table below.

VIK recommendation	1PS or 1MD5 design
Motor housing and terminal box in cast-iron, steel is permitted for frame size 355 and above	LOHER CHEMSTAR in cast-iron as standard LOHER VARIO in steel as standard
Standard temperature range -20 to +40 °C	Standard
Paint finish suitable for industrial climates with corrosive gases and vapors	Paint system N14A or higher quality
Fan covers must be designed with corrosion protection	Fan cover of zinc-plated sheet steel or increased wall thickness
The motor compartment must be protected to prevent any small parts entering through the terminal box	Flexible implementation for 1PS0 and 1PS1. For 1PS5 and 1MD5 this separation is standard due to the Ex type of protection.
Terminal box of minimum size and rotatable 4 × 90°, observe derating factors regarding the load on cables and wires	The required size and conductor cross-sections as well as rotation capability correspond to the standard design of 1PS and 1MD5, wire cross-sections are adapted
Nominal bearing lifetime 40000 h for coupling drive, the grease lifetime can be different or use of regreasing device	Standard for 1PS and 1MD5 Flat grease nipples are used with regreasing device
Efficiency at least IE2 also for explosion-proof motors	Standard
Defined noise emission limits	Standard
Motors in explosion-proof enclosures and optionally selected PTC thermistors must be designed for sole protection	1PS5 and 1MD5 with PTC thermistors (A11) are designed for VIK (K30) with sole protection (no converter rating plates). In larger industrial motors, sole protection is only provided and stamped as such for converter-fed operation.
For converter-fed operation, the bearing at NDE must be insulated in frame size 315 and above	Options for converter-fed operation are not included in the VIK options and must be ordered separately. If mains-operated motors with explosion-proof enclosures and PTC thermistors are subsequently used for converter-fed operation, insulated bearings must be retrofitted by the customer.
Motors in type of protection Ex d must be constructed with Ex e terminal boxes and must fulfill IIC type of protection in frame size 315 and below	Standard
Minimum requirements for the documentation	Documentation is not included with the VIK design (K30 or W09) and must be ordered separately

Overview

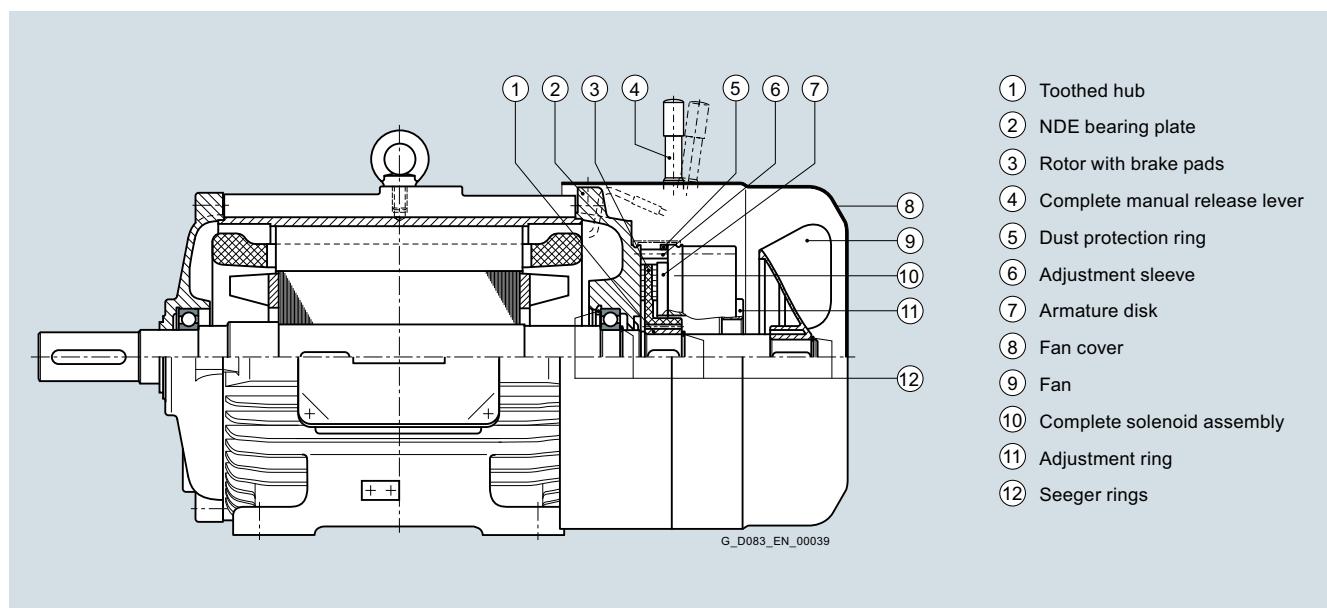

Three-phase brake motors with cage rotor

Due to the demands of modern manufacturing systems, the brake motor has become a special drive component in machine construction. In the rationalization of machines, in addition to the requirement for higher working speeds in switching operation, there is a demand for shortening the non-productive intervals. The brake motor ensures short braking times for the rotating masses, even with a high switching frequency. Another important application of brake motors is in stopping loads and reversing torques. The 1PS0 brake motor comprises a three-phase induction motor that is combined with a brake in a single unit.

Benefits

Thanks to its compact design, the brake motor is a useful component in drive technology wherever minimum braking time is a priority. The familiar advantages of the three-phase induction motor with a squirrel-cage rotor are also retained. This brake motor is suitable for multi-faceted customer-specific application cases. It can be used both for switching operation at a high switching frequency, a high follow-on accuracy and longer service life and as a high-power brake motor with a large operating capacity. The right brake size must be selected for the application. The brake motor is also particularly suitable for driving hoists and traversing gear.

Design

Sectional drawing of brake motor type 1PS020 frame size 200 with single-disk spring-operated brake

The brake motors have the following properties:

- Short switching times
- High operational reliability
- A low motor flywheel effect
- Favorable dimensions
- Low space requirements

Application

The main application areas are as follows:

- Braking of loads and centrifugal masses
- Braking in the event of danger
- Shortening of follow-on times
- Increased setting accuracy

Brake motors are available as shown in the selection tables, but also with higher outputs, different voltages, frequencies and numbers of poles as well as in pole-changing versions.

1 Introduction

General technical specifications

1

Brakes and brake motors

Overview (continued)

The surface-cooled brake motors are equipped with a quiescent current-operated (fail-safe) single-disk spring-operated brake with two asbestos-free brake pads. The bearing plate at the non-drive end is specially shaped and it is made of cast-iron in every motor. Refer to the table for the size of the bearings. Otherwise, in terms of their mechanical design, the brake motors correspond to the surface-cooled three-phase motors.

The brakes and fans of the brake motors are suitable for both directions of rotation. The degree of protection for the brake motors is IP55. Other degrees of protection are possible on request.

If it is necessary to rotate the shaft in the zero current state, the brake can be specially ordered with a manual release. All brakes feature torque adjustment.

Single-disk spring-operated brake

Design

Single-disk spring-operated brakes are fail-safe brakes with 2 frictional surfaces in which an electromagnetic field is used to release the brake which is applied using spring force. The spring-operated brake brakes in the zero current state and releases when current is flowing.

Special characteristics of the single-disk spring-operated brake:

- Braking in accordance with DIN VDE 0580 "Electromagnetic devices and components – General specifications"
- Holding brake with spring-loaded operation
- Microswitch for air gap monitoring as an option (brake size 12 and above)
- Braking torque is active in zero current state (fail-safe brake)
- Rugged and simple design
- High level of operational reliability due to long service life
- Brakes are designed for temperature class F
- Large operating air gap makes automatic readjustment superfluous
- Under conditions of extremely high wear, the operating air gap is easily adjusted
- Braking torque can be adjusted between 100 % and approximately 60 %
- Manual release with automatic return
- Brakes are corrosion-protected, asbestos-free friction pads
- The brakes are designed for 100 % duty ratio
- The brakes will operate in any position

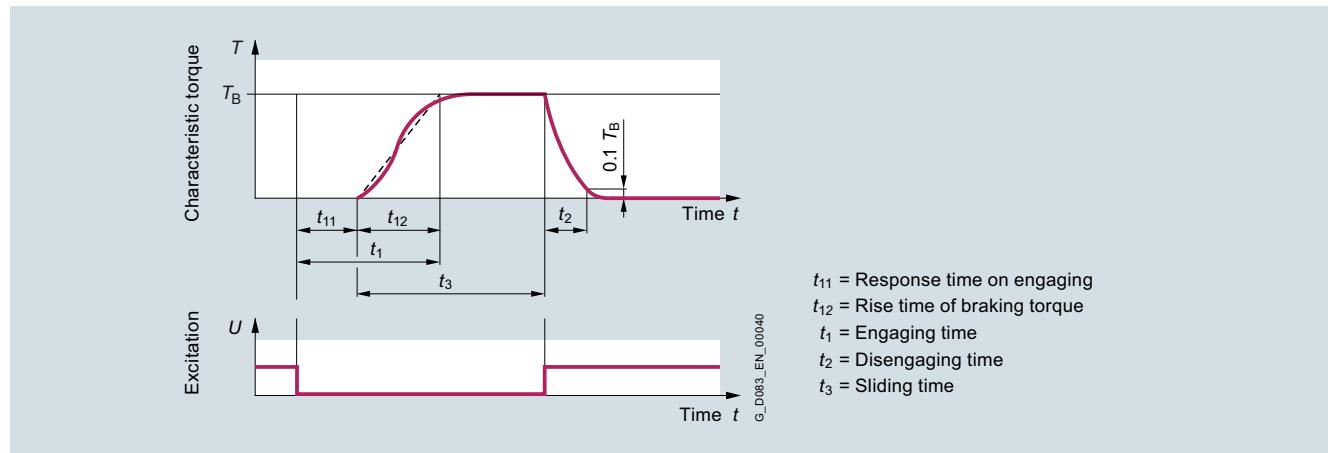

The standard voltages for the brake coils are: 24 V, 103 V, 180 V, 205 V +5 to 10 %. For the relationship between brake control voltage, rectifier type and brake coil voltage, see the section "Circuit diagrams".

Electrical connection

In the terminal box, apart from the motor connection terminals, there is also a bridge rectifier for the standard 230 V brake control voltage. For higher brake control voltages, either a half-wave rectifier with zero diodes can be installed or connection can be performed via an intermediate transformer that is, however, not included in the scope of supply. For cases in which the motor operating voltage does not comply with the brake control voltage, a separate brake control voltage must be supplied via an additional contact.

Overview (continued)Switching times

The switching times are given in the table below. The times are shown in the diagram.

Torque/time curve as a function of excitation voltage

- AC-side switching – extended engaging time (delayed response of the brake). The disengaging time is the same as for DC-side switching.
- DC-side switching – short activation time, short engaging time (quick response of the brake).

The switching times for DC-side switching are as follows:

Brake size	Brake characteristic torque $T_B^{1)}$ Nm	Maximum admissible switching energy for single switching Q_E J	Transitional switching frequency S_{ft} h ⁻¹	Switching times for $s_{GapRated}$			
				DC engage	Disengage	t_{11} ms	t_{12} ms
12	32	24000	30	28	25	53	115
14	60	30000	28	17	25	42	210
16	80	36000	27	27	30	57	220
18	150	36000	20	33	45	78	270
20	260	80000	19	65	100	165	340
25	400	120000	15	110	120	230	390

With AC-side switching, the t_1 values increase for the brakes to about 6 times the values.

¹⁾ Minimum braking torque for run-in frictional surfaces.

• min.		mm	0.3	0.3	0.3	0.3	0.4	0.4	0.5
• max.		mm	0.75	0.75	0.75	0.75	1.0	1.0	1.25

The brake coil has a supply voltage of 205 V. Other standard voltages for the coil are 24 V, 103 V and 180 V. Supply voltages other than those specified here are available at an additional charge. Voltage tolerance 10 % according to DIN IEC 60038.

Torque adjustment

The rotor with brake pads is connected to the motor shaft via the toothed hub. The armature disk is pressed firmly against the rotor in the zero-current state by means of springs. The braking torque is applied by means of this pressure.

The braking torque that can be transferred can be altered by adjusting the spring force. The brake is equipped with an adjustment ring. The spring force, and therefore the braking torque, can be adjusted by rotating the adjustment ring.

¹⁾ For possible assignment to motor frame sizes, see the output tables.

²⁾ Rotating parts of the brake

1 Introduction

General technical specifications

1

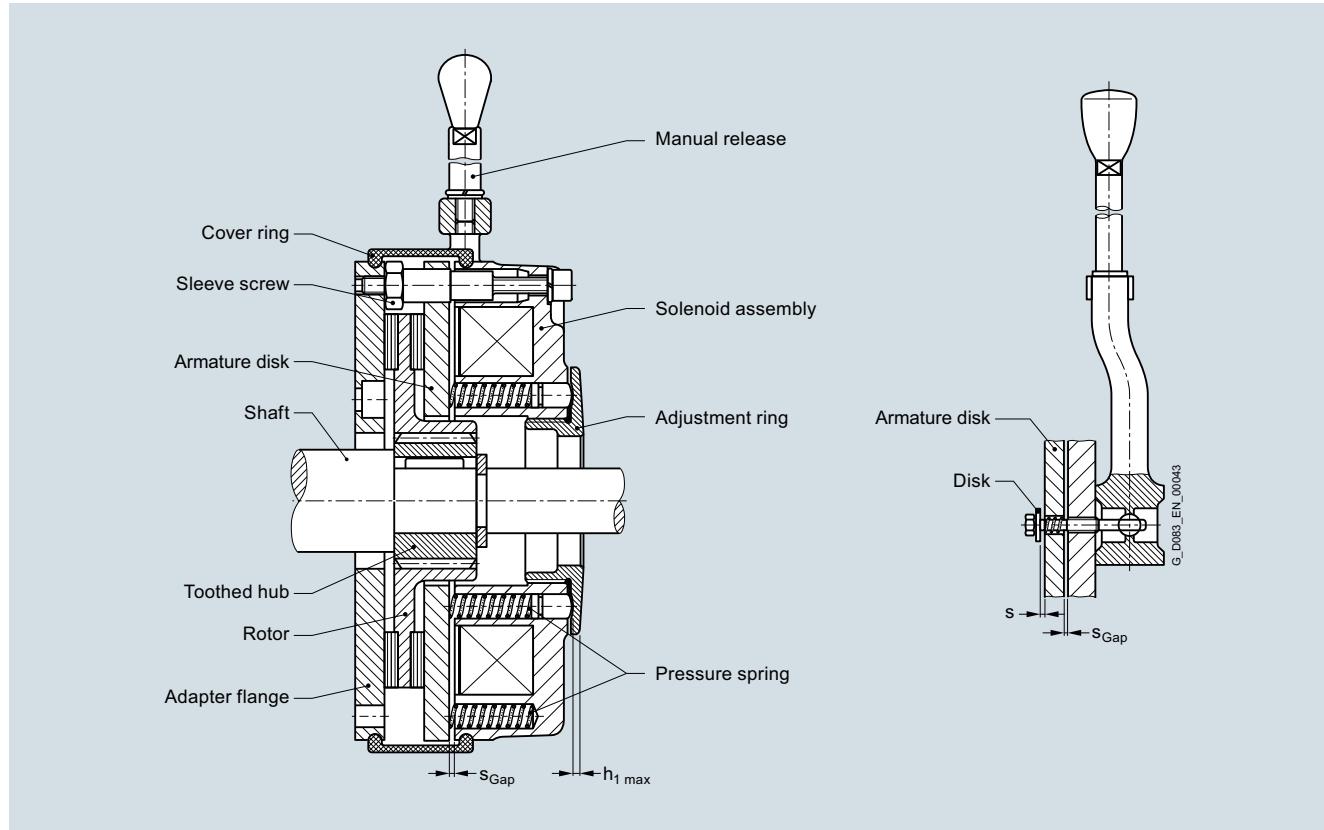

Brakes and brake motors

Overview (continued)

Brake with manual release

The brake can also be supplied with manual release as an option. When the manual release lever is pulled under zero current conditions, the armature disk is pulled by means of the tension bolts against the pressure springs in the solenoid assembly. An air gap is created between the rotor and the armature disk.

The brake is mechanically released and the shaft can rotate easily. The pressure spring on the tension bolts holds the manual release lever in its normal position during operation.

The air gap "s" is the distance between the armature disk and the disk. The dimension "s" must be taken into consideration when the manual release is installed.

Brake size	Air gap		
	s_{Gap}	$s^{+0.1}$	
	mm	mm	
12	0.3	1.5	Operating brake ($s_{\text{Gap max.}}$ ca. $2.5 \times s_{\text{Gap}}$)
14			
16			
18	0.4	2	Holding brake with emergency stop function ($s_{\text{Gap max.}}$ approx. $1.5 \times s_{\text{Gap}}$)
20			
25	0.5	2.5	

Important:

Even with reduced characteristic torque, the release distance must be adjusted when the maximum air gap $s_{\text{Gap max.}}$ is reached.

Noise behavior

During operation, the noise response of the brake motor is hardly affected by the brake. The measuring-surface sound pressure level can therefore be obtained from the noise value tables for 1PS0, 1PS4, 1PS5 and 1MD5 motors (without brakes) in the section "Measuring-surface sound pressure level".

When the brake is released or engaged, however, sudden noises arise. These are recorded by means of the A-weighted emission sound pressure level (impulse sound pressure level) according to DIN EN ISO 1680 – see Table.

Frame size	A-weighted emission sound pressure level (guide values)
L_{pAF}	dB (A)
132	76
160	80
180 ... 250	83

Overview (continued)**Basis for the calculation**

A brake is designed mainly in accordance with the required braking torque T_{req} .

The masses to be braked (moments of inertia), relative speeds, braking times and the switching frequencies must be included in the calculations. The boundary conditions, such as ambient temperature, air humidity, dust accumulation and mounting position must be known. In the case of extreme/critical operating conditions, the manufacturer should be consulted. Dimensioning must be in accordance with VDI guideline 2241.

The friction surfaces must be kept free of grease and oil at all times.

Safety factor

In order to ensure that mechanical transmission is reliable even under extreme operating conditions, the calculated braking torque should include the safety factor K which must be selected in accordance with the operating conditions.

Load types

In practice, the following main types of load occur:

$$T_{\text{req}} = T_a \cdot K + T_B$$

Dynamic and static loading

Most application cases involve a mixture of loads, because a dynamic load is added to a static load torque.

$$T_{\text{req}} = (T_a \pm T_L) \cdot K + T_B$$

+ T_L is used, for example, when lowering a load

- T_L is used for normal braking

Rough determination of the required braking torque or frame size

If only the drive power to be transferred is known, the required torque or braking torque can be determined as follows:

$$T_{\text{req}} = 9550 \frac{P}{\Delta n_0} \times K \leq T_B$$

Thermal load capacity

If high switching frequencies and increased friction energy per switching cycle are expected, thermal recalculation of the brake is recommended.

The friction energy per switching cycle is calculated as follows:

$$Q = \frac{J_L + \Delta n^2}{182.5} \times \frac{T_B}{T_B + T_L}$$

- T_L is used, for example, when lowering a load

+ T_L is used for normal braking

The admissible friction energy per switching cycle for a known switching frequency can be obtained from the following diagram. For a known friction energy per switching cycle, the admissible switching frequency can similarly be obtained from this diagram.

Abbreviations and definitions used

P	Drive power in kW
T_B	Characteristic torque for the brake in Nm
T_L	Load torque in Nm
T_{req}	Required braking torque in Nm
T_a	Deceleration torque in Nm
Δn_0	Initial relative speed of the brake in rpm
J_L	Moment of inertia of all drive components referred to the shaft to be braked in kgm^2
t_1	Engaging time, $t_1 = t_{11} + t_{12}$ in s
t_2	Disengaging time (time from the start of torque removal until the value 0.1 T_B is reached) in s
t_3	Sliding time (time during which a relative movement occurs between the input and the output with the brake engaged) in s. This time depends on the delay required by the application case e.g. switching frequency
t_{11}	Responding delay on engaging (time from voltage switch-off up to the moment when the torque begins to rise) in s
t_{12}	Time taken for the braking torque to rise in s
K	Safety factor
Q	Calculated switching energy per switching cycle in J
Q_{adm}	Max. admissible switching energy per switching cycle in J
S_n	Switching frequency, i.e. the number of braking operations distributed evenly over the time unit in h^{-1}

Overview (continued)

Seawater-protected spring-operated brake IP67

The solenoid double-disk spring-operated brake of type 4BZFM (Stromag) brakes the motor if the supply is disconnected or in the event of power failure. Motors with built-on brakes are mainly used in cranes to drive traversing, trolley and hoisting gear, but also in marine winch drives. The size of the brake depends on the external moment of inertia, brake speed and the required braking time.

Further characteristics of the solenoid double-disk spring-operated brake of type 4BZFM

- Seawater-protected solenoid double-disk spring-operated brake
- Torque range: 100 to 1600 Nm (static torque)
- For use in cranes and offshore
- A cast-iron cover ensures IP67 degree of protection, so it can be used under the most difficult climatic conditions
- All surfaces finished
- When the cover is removed, the braking function is maintained
- Minimal wear, brake pads are easy to replace
- Emergency release
- IEC – mounting flange
- As an option: switching status indication, terminal box, anti-condensation heater, prepared for tachometer mounting
- Type approval: Germanisch Lloyd, Lloyds Register of Shipping, American Bureau of Shipping

1 Introduction

General technical specifications

Converter-fed operation – Special mechanical characteristics

Overview

Basics

Due to optimized design and manufacturing, most 1PS0 motors (without explosion protection) and 1PS1, 1PS4, 1PS5, 1MD5 motors (with explosion protection) can also be used for converter-fed operation without the need to modify the electrical and mechanical design. The maximum limits and parameters for converter-fed operation are summarized in this catalog. The special mechanical characteristics which must be taken into account that result from the higher speeds are listed below.

Bearing currents

It is known that in motors supplied from the mains, a voltage can form along the mechanical shaft due to magnetic unbalance. If this shaft voltage exceeds a threshold value of approximately 500 mV, bearing currents that can damage the bearings start to flow. This phenomenon only occurs with larger motors. Therefore, to prevent bearing currents, the non-drive end bearing is insulated as of frame size 315. However, we recommend that motors of frame size 225 and above be equipped with insulated bearings on the non-drive end. The bearing insulation is performed by insulating the bearing seat on the motor shaft or through the use of current-insulated rolling-contact bearings. The minimum requirement for the ordering options is described in detail under "Output tables for converter-fed operation".

Converter-fed operation can increase these shaft voltages and bearing currents (typically by approximately 30 to 50 %). Additional high-frequency bearing voltages and currents can occur during operation with pulse converters (common mode bearing currents and circulating currents). The bearing currents depend on the motor size and the converter version (clock frequency, pulse modulation, output filter).

Previous experience shows that drives with SINAMICS G180 pulse converters (clock frequency 3 to 7.5 kHz, pulse modulation through voltage vector control, standard dv/dt output filter) and 1PS0, 1PS1, 1PS4, 1PS5 and 1MD5 motors are not damaged by the bearing currents that occur.

Converter-fed operation – Special mechanical characteristics
Overview (continued)

Mechanical limit speeds

When the motor is operated above its rated frequency, it is important to note that the maximum speeds are limited by the limits for the roller bearings, the critical rotor speed and the rigidity of the rotating parts. In the case of motors for use in potentially explosive areas of Zone 1 or 2, in accordance with EN 60079-0, the peripheral speed and therefore the speed of plastic fans is also limited.

For the limit speeds listed in the tables below, further special measures may be required.

**Mechanical limit speeds for standard version:

Fans made of special plastic or metal are used for explosion-proof motors.

1 Introduction

General technical specifications

Converter-fed operation – Special mechanical characteristics

Overview (continued)

Operating explosion-proof motors on a converter

For the safe operation of explosion-proof motors on a converter, some basic rules must be observed. These rules are summarized in the R20000 guideline. The current version of R20000 is stamped on the rating plate.

The guideline must be complied with regardless of the type and manufacturer of the converter.

If explosion-proof motors are to be operated at frequencies above 60 Hz or 10 % above the cutoff frequency, it may be necessary to perform a system test of the motor with the converter.

The minimum requirement for the ordering options is described in detail under "Output tables for converter-fed operation". The customer is responsible for fulfillment of the regulations which may be affected by the use of sine-wave filters, long cables, etc.

Operating dust explosion-proof motors on a converter

Dust explosion-proof motors can be operated on a converter if suitable monitoring equipment is used (e.g. PTC thermistor for sole protection and certified evaluation units). The boundary conditions described above also apply in this case and compliance with the R20000 guideline, in particular, is essential. For motors in the admissible type of protection for Zone 21, the limits of the control range between 5 and 50 (60 Hz) also apply. The maximum possible output in converter-fed operation must not exceed the output for mains-fed operation even in the case of higher thermal utilization on the converter. In special cases, it may be necessary to test the original system comprising the motor with the converter, or a system comprising the same types.

If the motor is operated on SINAMICS G180 or on a different SINAMICS converter with a suitable filter (e.g. dv/dt filter), operation on line supplies from 500 V to 690 V is possible. Operation on converters with vector control is admissible. Compliance with the boundary conditions described in the guideline No. 20000h must be ensured by the operating company.

Siemens R20000 guideline for converter-fed operation of explosion-proof, low-voltage, three-phase motors

Converter-fed operation of explosion-proof, low-voltage, three-phase motors with type of protection "Explosion-proof enclosure" and "Non-sparking" for temperature classes T1 – T4

Explosion-proof three-phase motors may be operated on a converter if the following conditions are satisfied:

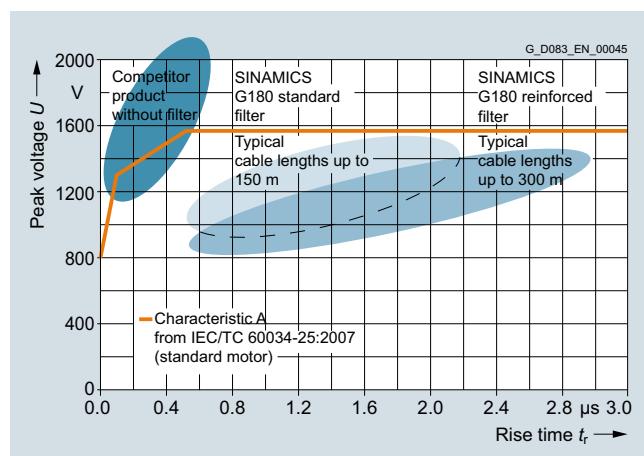

1. The output voltage of the converter shall be controlled such that within the frequency range below the rated frequency of the motor, an approximately linear relationship is maintained between the voltage (fundamental component) and the frequency (fundamental component), i.e. practically constant machine flux in accordance with the rated data.
Operation above 1.1. times the rated frequency is only admissible when the motor has an appropriate rating plate for converter-fed operation.
2. $I_{\text{continuous}}$ is the value to which the current is restricted by converter control in continuous duty.
The maximum value which can be set for $I_{\text{continuous}}$ is the continuously admissible rated motor current in accordance with the rating plate on the motor or the value specified in the documents that describe converter-fed operation (R No.).
3. I_{temp} is the value to which the current is limited by converter control in the case of temporary overloads of a maximum duration of t_{temp} .
The maximum value which can be set for I_{temp} is $1.5 \times I_{\text{continuous}}$.
4. The time t_{temp} is the maximum time for which the converter permits $I_{\text{continuous}}$ to be exceeded.
 t_{temp} is to be set for a maximum of 60 seconds.
5. The installed thermistors (e.g. PTC thermistors), which must be suitable as sole protection, are to be connected to a tripping device conforming to guideline 94/9/EC with a prototype test certificate such as CK140: PTB 04 ATEX 3038 or CK144/145: PTB 02 ATEX 3059.
6. Voltage peaks (especially for pulse inverters with long motor cable)
 - a) The assessment of the terminal box in relation to clearances and creepage distances allows for converter-fed operation with voltage peaks (\hat{U}_{LL} and \hat{U}_{LE}) of up to $\hat{U} = 1866$ V. This may not be exceeded in the interests of explosion protection.
 - b) To prevent partial discharges arising, with Ex nA machines the voltage at the motor terminals must also be limited in relation to the rise time to values which fall below the characteristic curve of the "withstand voltage curve" diagram (see picture below). With Ex d motors, this is recommended so as not to limit the service life.

Siemens Aktiengesellschaft

Converter-fed operation – Special mechanical characteristics

Overview (continued)**Typical voltage stress of motors for operation on the SINAMICS G180 converter at 690 V**

Motors of the 1PS or 1MD5 series with standard insulation are designed for peak voltage in accordance with IEC/TS 60034-25:2007 Curve A (1560 V), see the diagram below.

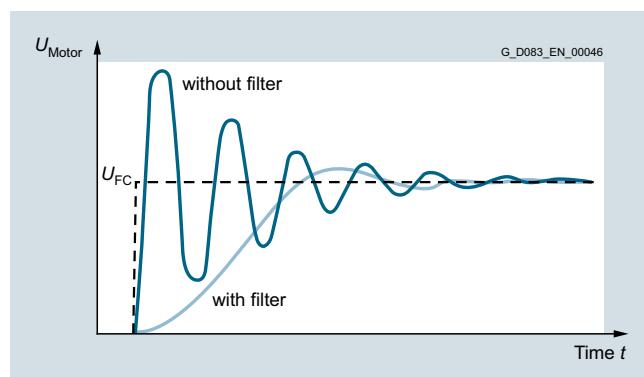

As an option, 1PS motors are also available with special insulation for peak voltages of 2.25 kV. In this case, the winding is suitable for peak voltages in accordance with IEC/TS 60034-25:2007 Curve B. Due to the space required by the special winding insulation, this option can only be ordered for frame size 160 and above. The possible output of the motor is then 5 % lower than a motor with standard insulation. The limits for peak voltage with regard to explosion protection, especially for the terminal box, are applicable as specified in the R20000 regulation.

Engineering information for converter-fed operation**Admissible voltage stress**

More stress is placed on the insulation of the motor winding with converter-fed operation than with mains-fed operation. The voltage stress also depends on the type of converter used.

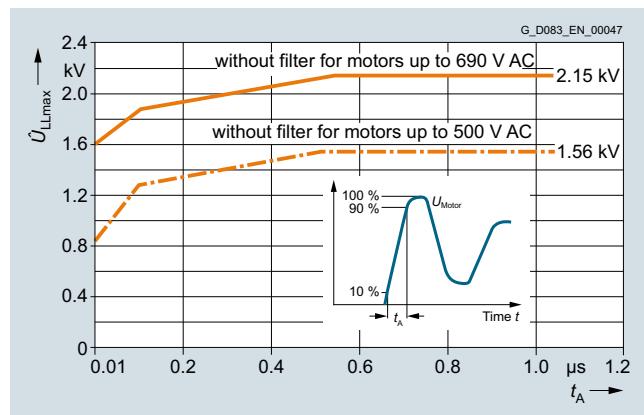

Voltage stress on a converter with pulse width modulation (PWM)

The PWM converter subjects the motor windings to wear and tear mainly by quickly applying voltage pulses. Each switching process of the converter releases a voltage wave onto the motor supply cable that can result in excessive motor voltages due to reflection (see diagram).

Typical progression of converter voltage U_{FC} and motor voltage U_{Motor} on the PWM converter (converter with and without output filter, length of motor cable 100 m)

The maximum voltage is influenced by the rise time of the pulses and by the length of cable used between motor and converter. A dV/dt output filter at the converter can reduce the maximum motor voltage to uncritical values. With the SINAMICS G180 converters, a high-quality dV/dt output filter is included as standard. With converters without dV/dt output filters, inadmissible voltage peaks can occur even with a relatively short motor cable (approx. 10 m). With the dV/dt output filters of the SINAMICS G180 converter, depending on the supply voltage, cable lengths of 150 m (at 690 V) to 300 m (at 400 to 500 V) are possible. The admissible voltage stress for the motor depends on the rise time t_A of the converter output voltage. The admissible voltage stress for our motors with standard insulation (1.56 kV curve) is shown in the diagram below. Special insulation is necessary for higher voltage stress (2.15 kV curve; on request, additional charge).

Admissible voltage stress for motors with standard insulation (\dot{U}_{LLmax} = Maximum value of phase-to-phase voltage)

Motor operation on converter with sine-wave filter

In special applications, e.g. with extremely long motor cables, so-called sine-wave filters are used which result in a smoother converter voltage than dV/dt filters. When a sine-wave filter is used, it is important to note that a significant drop in motor voltage of up to 15 % occurs. Under these operating conditions, derating is necessary to prevent the motors from overheating. For operation with sine-wave filters and the consequent reduction of 10 to 15 % in motor voltage, the admissible outputs for converter-fed operation must be similarly reduced by 10 to 15 %.

For the LOHER CHEMSTAR and LOHER VARIO series, it is possible to dimension the motors for the reduced voltage at the motor terminals that results from the converter, which can prevent a reduction in output due to reduced voltage.

For LOHER CHEMSTAR type series, PTC thermistor must be selected for sole protection of the winding with Option **A15** or **A16** and with frame size 315 and above Option **L27** (insulated bearing, fan side).

The current values specified in the lists are calculated for 400 V.

¹⁾ Not possible with 400 V, current values apply to 690 V.

1 Introduction

General technical specifications

Converter-fed operation – Special mechanical characteristics

Overview (continued)

For LOHER CHEMSTAR type series, PTC thermistor must be selected for sole protection of the winding with Option **A15** or **A16** and with frame size 315 and above Option **L27** (insulated bearing, fan side).

For LOHER VARIO type series and welded steel [types 355LC](#), [355LD](#), without further options, sole winding protection is implemented with 3 PTC thermistors for winding and bearing insulation at the fan side.

The current values specified in the lists are calculated for 400 V.

For LOHER CHEMSTAR 1PS0 type series, PTC thermistor must be selected for protection of the winding with Option **A11** or **A12** and with frame size 315 and above Option **L27** (insulated bearing, fan side).

For LOHER VARIO type series and welded steel **types 355LC**, **355LD**, without further options, sole winding protection is implemented with 3 PTC thermistors for winding and bearing insulation at the fan side.

The current values specified in the lists are calculated for 400 V.

1 Introduction

General technical specifications

Technical definitions for pole-changing motors

Overview

General information

Mechanically, all pole-changing motors correspond to the single-speed motors. Pole-changing motors in frame size 225 and above of the 2-pole level have the same bearings and the same shaft extensions as the corresponding frame sizes of the single-speed 2-pole motors.

Voltage and frequency

The pole-changing motors in this catalog are supplied for the following voltages in 50 Hz supply systems: 400 V, 500 V or 690 V.

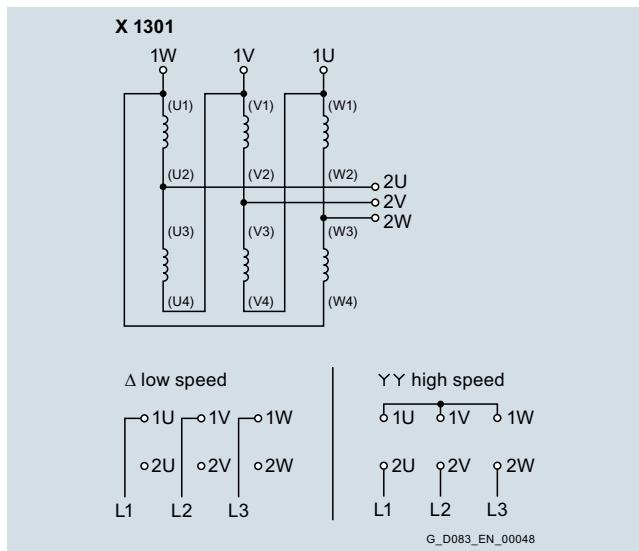

Within the range of these voltages, motors can be supplied with abnormal windings for any rated voltage required. For rated voltages below 400 V as well as different frequencies, it is essential to inquire.

Output

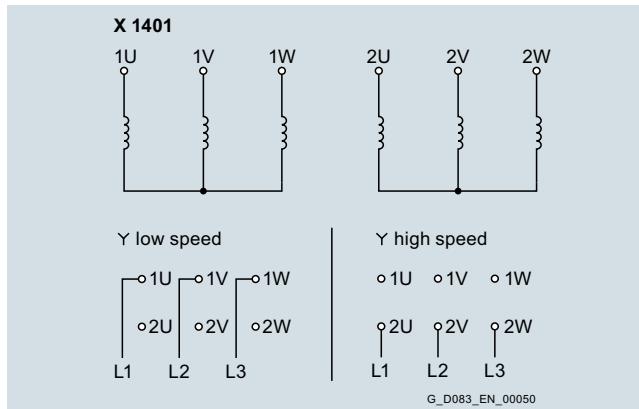

The outputs specified in the selection tables apply to duty type S1 according to EN 60034-1.

With regard to coolant temperatures above 40 °C and site altitudes above 1000 m above sea level, the same points apply as for single-speed motors.

Circuit diagrams for two speeds

Speed ratio 1:2; 1 winding (Dahlander) circuit Δ/YY for constant torque 4-/2-, 8-/4- and 12-/6-pole

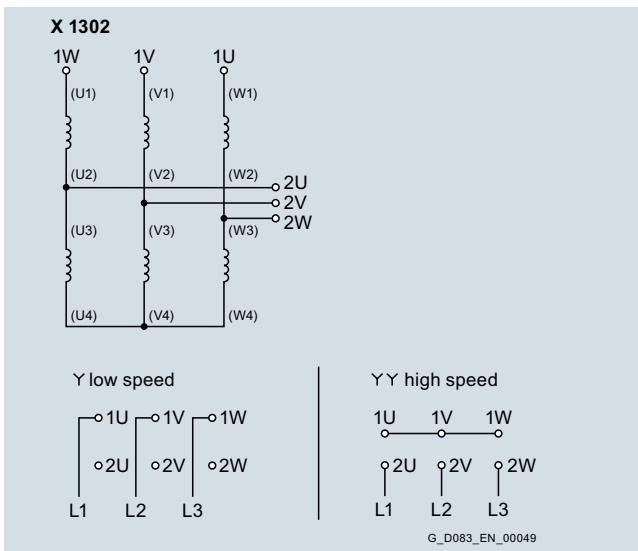

Speed ratio 1:1.5 and 1:1.33; 2 separate windings in Y/Y or Y/Δ or Δ/Y circuit for constant torque 6-/4-pole and 8-/6-pole, for torque that reduces in accordance with the square law 6-/4-pole and 8-/6-pole

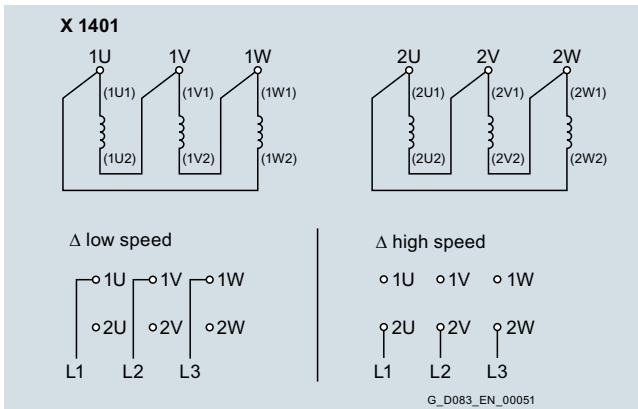

Torque

The pole-changing motors can be started up from standstill whatever the number of poles. In the output tables, the starting torques are specified for direct switch-on and the rotor classes. The high speed levels can have pull-up torques; so where possible start-up must be performed at the lower speed levels. Starting is improved as a result, and with heavy starting the temperature rise is reduced.

The pole-changing motors included in the output tables are supplied for 2 or 3 fixed speed levels. If output levels are required other than those listed in the catalog, the motors in Dahlander circuits can also be supplied with 2 separate windings. The output will, however, be considerably lower than for a motor with a Dahlander circuit. The following variants are available:

Speed ratio 1:2; 1 winding (Dahlander) circuit Y/YY for torque that reduces in accordance with the square law (fan drive) 4-/2-pole, 8-/4-pole and 12-/6-pole

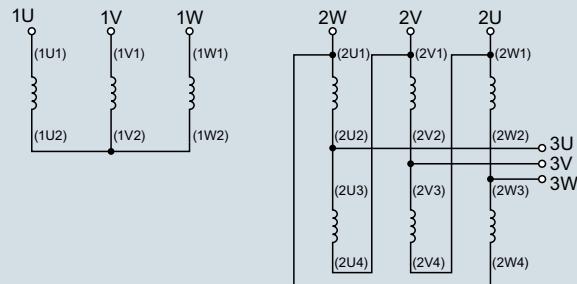

Speed ratio 1:1.5 and 1:1.33; 2 separate windings in Δ/Δ or Y/Δ or Δ/Y circuit for constant torque 6-/4-pole and 8-/6-pole, for torque that reduces in accordance with the square law 6-/4-pole and 8-/6-pole

Motors with Explosion Protection

Orientation

Overview

In many industrial and public sectors, explosion protection or explosion hazards are ever-present, e.g. in the chemicals industry, in refineries, on drilling platforms, at gas stations, in feed manufacturing and in sewage treatment plants.

The risk of explosion is always present when gases, fumes, mist or dust are mixed with oxygen in the air in an explosive ratio close to sources of ignition that are able to release the so-called minimum ignition energy.

In the chemical and petrochemical industries in particular, when crude oil and natural gas are transported, or in mining, milling (e.g. grain and granular solids), this can result in serious injury to persons and damage to equipment.

To ensure maximum safety in these areas, legislators in most countries have implemented appropriate stipulations in the form of laws and regulations based on national and international standards.

Explosion-protected equipment is designed such that an explosion can be prevented when it is used properly.

The explosion-protected equipment can be designed in accordance with various types of protection.

The local conditions must be subdivided into specified zones by the user with the assistance of the responsible authorities in accordance with the frequency of occurrence of an explosion hazard. Device (equipment) categories are assigned to these zones. The zones are then subdivided into possible types of protection and therefore into possible equipment (product) types.

Zone	Zone definition acc. to	Assigned types of protection	Category according to 94/9/EC	Equipment protection level acc. to IEC/EN 60079-0
Gas 1) 2)	Dust 1) 2)	IEC/EN 60079-10-1 for gas atmospheres IEC/EN 60079-10-2 for dust atmospheres		
0	-	An area in which there is an explosive gas atmosphere constantly, over a long period or frequently .	Low voltage motors not permitted	1 Ga
1	-	An area in which it is expected that an explosive gas atmosphere will occur occasionally during normal operation.	Ex e Ex de Ex d	2 Gb
2	-	An area in which in normal operation it is expected that an explosive gas atmosphere will occur only rarely and then only briefly .	Ex nA	3 Gc
-	20	An area in which there is an explosive gas atmosphere comprising a dust-air mixture constantly, over a long period or frequently .	Low voltage motors not permitted	1 Da
-	21	An area in which it is expected that an explosive gas atmosphere comprising a dust-air mixture will occur occasionally during normal operation.	Ex tb	2 Db
-	22	An area in which in normal operation it is expected that an explosive gas atmosphere in the form of a cloud of flammable dust in air will occur only rarely and then only briefly .	Ex tc ³⁾	3 Dc

¹⁾ Motors of

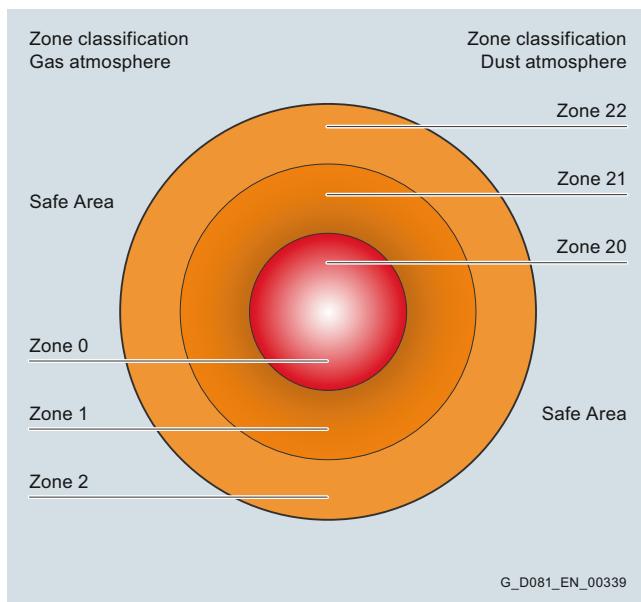

- Zone 1 can also be used in Zone 2
- Zone 21 can also be used in Zone 22

Classification of zones

Areas subject to explosion hazard are divided into zones. Division into zones depends on the chronological and geographical probability of the presence of a hazardous, potentially explosive atmosphere. Information and specifications for classification of the zones are laid down in the following standards:

- IEC/EN 60079-10-1 for gas atmospheres
- IEC/EN 60079-10-2 for dust atmospheres

Further, a distinction is made between various explosion groups as well as temperature classes and these are included in the hazard assessment.

Depending on the particular zone and therefore the associated hazard, operating equipment must comply with defined minimum requirements regarding the type of protection. The different types of protection require corresponding measures to prevent ignition that should be implemented at the motor in order to prevent that a surrounding explosive atmosphere is ignited.

²⁾ Motors which are certified for gas or dust protection must not be used in hybrid mixtures! Hybrid mixtures:
When explosive gas and dust atmospheres occur simultaneously.

³⁾ Motors are not approved for operation in environments containing conductive dust.

Overview (continued)

Hazardous areas

Zone acc. to EN 60079-14	Explanations	Examples	Permissible electrical equipment	
			General	Motors
Gases, vapors and mist				
Zone 0	Areas in which there is an explosive gas atmosphere <u>constantly or over a long period.</u>	This normally only applies to the internal space of containers or apparatus.	Electrical equipment is only permitted to be used in Zone 0 which is explicitly certified for use in this zone.	Explosion-proof motors are not permitted to be used here whatever their type of protection. Exceptions can only be applied by the monitoring authorities.
Zone 1	Areas in which it is to be expected that a hazardous, potentially explosive atmosphere will only occur <u>occasionally.</u>	These include, for example: Close proximity to Zone 0, the internal space of equipment, close proximity to <ul style="list-style-type: none"> • Feed openings • Filling and draining facilities • Fragile apparatus or pipes made of glass or ceramics, etc. 	Electrical equipment must be explosion-proof in accordance with one of the EN 60079-0 types of protection.	In Zone 1, explosion-proof motors must be used that have type of protection "Explosion-proof enclosure", "Increased safety" or "Pressurized enclosure".
Zone 2	Areas in which it is to be expected that a hazardous, potentially explosive atmosphere will occur <u>only rarely and then only for a short period.</u>	This may also include: Areas surrounding Zones 0 and 1. Areas surrounding flange connections with flat seals for pipes in closed rooms.		Explosion-proof motors in the type of protection "Non-sparking" Ex nA can be used in Zone 2.
Dust				
Zone 20	Areas in which a potentially explosive gaseous atmosphere in the form of a cloud of combustible dust is present <u>constantly over long periods, or frequently.</u>	This normally only applies to the internal space of apparatus (mills, dryers, mixers, pipelines, silos, etc.)	Electrical equipment is only permitted to be used in Zone 20 which is explicitly certified for use in this zone.	Explosion-proof motors are not permitted to be used here. Exceptions can only be applied by the monitoring authorities.
Zone 21	Areas in which a potentially explosive atmosphere in the form a cloud of combustible dust is <u>occasionally present in normal operation.</u>	This zone may also include: Areas in the immediate vicinity of filling and draining stations and areas in which dust deposits build up that could occasionally result in an explosive mixture of combustible dust and air during normal operation		Motors with type of protection "Explosion-proof enclosure", "Increased safety" or "Non-sparking" can be used in Zone 21 provided that they comply with IP6x degree of protection and fulfill the requirements of EN 60079-0 and EN 60079-31.
Zone 22	Areas in which a dangerous explosive atmosphere in the form of a cloud in the air containing flammable dust <u>does not usually occur or occurs only briefly during normal operation.</u>	These may also include: Areas in the vicinity of apparatus when dust may be expelled from unsealed areas (e.g. mill rooms).		Motors without EC type-examination certificate (with EC Declaration of Conformity of the manufacturer) are also permitted to be used in Zone 22. For non-conductive dust, IP5x degree of protection must be implemented as a minimum and the requirements of EN 60079-0 and EN 60079-31 must be fulfilled. In the case of conductive dust, the requirements for Zone 21 apply.

Note:

The installation regulations of VDE 0118 apply to firedamp protection equipment. In mining, the areas are not subdivided into Zones.

Note I:

Layers, deposits and accumulations of combustible dust must be taken into consideration like any other possible cause of an explosive atmosphere.

Note II:

Normal operation refers to the state in which the equipment is used within its design parameters.

Motors with Explosion Protection

Orientation

Overview (continued)

Types of protection

Type of protection "Non-sparking" Ex nA acc. to IEC/EN 60079-15

For motors with type of protection "Non-sparking", the type of construction prevents the occurrence of arcing, sparks or hot surfaces during normal operation. Motors of this type of protection are occasionally located in a potentially explosive atmosphere whereby the atmosphere can achieve a level that poses a risk. These motors are assigned to device group II – category 3G (corresponding to Zone 2).

The LOHER CHEMSTAR and LOHER VARIO Ex nA series are generally certified for the highest class "IIC". They are marked in accordance with the EC directive (94/9/EC) with II 3G Ex nA IIC T3 Gc. Compliance with the regulations is documented with an EC Declaration of Conformity.

The motor terminal boxes are also marked and certified as "Non-sparking". The terminal boxes of the LOHER CHEMSTAR and LOHER VARIO Ex nA series are identical in construction to the Ex e "Increased safety" connection system. In accordance with the current, harmonized edition, EN 60079-0 Edition 2009, the gas for the type of protection test must be specified in the case of type of protection "Non-sparking".

Type of protection "Explosion-proof enclosure" Ex d acc. to IEC/EN 60079-1

For motors in type of protection "Explosion-proof enclosure", it is ensured that any explosion will be restricted to within the motor. The housing must resist the pressure of the explosion and also prevent ignition from the internal to the external atmospheres. Motors in type of protection "Explosion-proof enclosure Ex d" are used in a potentially explosive atmosphere whereby this atmosphere can achieve a level that poses a risk. These motors are assigned to device group II – category 2G (corresponding to Zone 1). They ensure a high degree of safety.

To define the risk posed by a potentially explosive gas, the minimum ignition temperature of a dust cloud is required as well as details of the possibility of a flame exiting through a narrow slit in the motor housing. This is achieved by classification in explosion groups IIA, IIB and IIC, whereby IIC represents the highest requirements (see the table "Assignment of combustible gases and vapors").

LOHER CHEMSTAR Ex d(e) motors

The LOHER CHEMSTAR 1PS5 motor series in type of protection Ex d(e) are approved for use in potentially explosive atmospheres of Zone 1 according to EN 60079-0, EN 60079-1 and EN 60079-7. They are marked in accordance with the EC directive (94/9/EC) with II 2G Ex d IIB T3-T6 Gb and II 2G Ex d IIC T3-T6 Gb. If the terminal box is in type of protection "Increased safety", they are marked with II 2G Ex de IIB T3-T6 Gb and II 2G Ex de IIC T3-T6 Gb.

Compliance with the regulations is ensured in every case with an EC type-examination certificate.

SIMOTICS XP motors

The SIMOTICS XP 1MD5 motor series are positioned in the range of explosion-proof motors alongside the LOHER motor series and represent the future standard product series. SIMOTICS XP motors are characterized by significantly shorter delivery times, as well as by a considerable simplification of order processing, but in comparison to the 1PS5 motor series the variety of products is limited and the product characteristics are fixed. The components with relevance for the type of protection, such as housing, bearing plate and terminal box, are identical in design in the 1MD5 and 1PS5 motor series. These two series are therefore mechanically interchangeable and offer a well-rounded portfolio ranging from 1MD5 standard applications to 1PS5 special applications.

The SIMOTICS XP 1MD5 motors are explosion-proof, 3-phase induction motors with squirrel-cage rotors. They are suitable for use under ambient conditions in which there is a high risk of an explosive atmosphere being generated as a result of gas, vapor or mist (Zone 1). The motors comply with directive ATEX 94/9/EC and are marked with II 2G Ex de IIC T3-T6 Gb.

Type of protection "Dust explosion protection" Ex t acc. to IEC/EN 60079-31

The motor series in types of protection "Non-sparking" and "Explosion-proof enclosure" already described can also be designed for dust explosion protection. Atmospheres with potentially explosive dust are classified as frequently occurring (Zone 21) and rarely occurring (Zone 22). Further classification differentiates between conductive and non-conductive dust. In general, motors of the 1PS and 1MD5 series can be used in Zone 21 for non-conductive and conductive dust and in Zone 22 for non-conductive dust. The motors are marked in accordance with EN 60079-0 and EN 60079-31 with II 3D Ex tc IIB T130 °C Dc (Zone 22, non-conductive dust) or II 2D Ex tb IIC T130 °C (Zone 21, conductive dust). The installed terminal boxes are marked and certified in accordance with the dust and gas explosion protection class.

Suitability of the motors is confirmed for Zone 21 with an EC type-examination certificate and for Zone 22 with an EC Declaration of Conformity.

Motors with dual labeling for gas and dust may only be used in applications in which gas and dust occur simultaneously after prior examination of the properties of the hybrid mixtures by the user.

For further information, see Chapter "Operation of motors with type of protection "Dust explosion protection""

Overview (continued)

Overview of standards for explosion protection

The explosion-proof three-phase motors comply with the European standards. The European standards are recognized by all member states of CENELEC (European Committee for Electrotechnical Standardization). The national electrotechnical committees of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Spain, Sweden, Switzerland, Portugal, and United Kingdom (UK) are affiliated to CENELEC.

Equipment	European standard
General provisions	EN 60079-0
Flameproof enclosures	EN 60079-1
Increased safety	EN 60079-7
Classification of areas (gases, vapors and mist)	EN 60079-10-1
Classification of areas (dust)	EN 60079-10-2
Intrinsic safety	EN 60079-11
Electrical equipment in potentially explosive atmospheres (gases, vapors, mist)	EN 60079-14

Explosion protection directive 94/9/EC – ATEX 100a

Explosion protection has been fully harmonized by directive 94/9/EC in Germany and in the other member states of the European Union. The requirements of the new law came into force on July 1, 2003 and since then only those devices and protection systems that comply with directive 94/9/EC are permitted to be marketed.

Directive 94/9/EC and directive 1999/92/EC specify that only specific electrical equipment and devices are permitted to be used in the zones.

The devices are assigned to device groups and categories.

Certifications

With the exception of the dust explosion proof motors certified by EXAM (BVS), the motors in this catalog are certified by the

Example "Non-sparking":

CE marking

Number of the certifying "notified" body (0158 = EXAM)

Explosion protection marking

Device group: **I** = Underground
II = All other areas

Category: **2** (Zone 1/21)
3 (Zone 2/22)

Ex atmosphere **G** = Gas
D = Dust

Explosion-proof equipment – Explosion protection (protection method) in accordance with European standards

Type of protection **nA, d, de, e, tb or tc** (de = Motor enclosure Ex d with terminal box Ex e) – see types of protection

Explosion group and explosion subgroup
II = Gas (IIA, IIB or IIC)
III = Dust (IIIA, IIIB or IIIC)

see Table "Examples of the assignment of combustible gases and vapors"

Temperature class with max. surface temperature
T1 = 450 °C **T4** = 135 °C
(see the following section)
T2 = 300 °C **T5** = 100 °C
T3 = 200 °C **T6** = 85 °C

G = Gas
Ga = Very high protection,
Gb = High protection,
Gc = Increased protection
D = Dust
Da = Very high protection,
 = High protection,
Dc = Increased protection

Additional information on the subject of explosion protection, types of protection and zones is provided in the Siemens brochure "Explosion Protection".

German Federal Testing Laboratory. EC type-examination certificates from the German Federal Testing Laboratory for explosion-proof electrical equipment in accordance with EN standards are valid in all EU member states. Any deviations from the certified electrical and mechanical design specified in this list require a supplement to be issued, or re-certification.

Use of electrical equipment in accordance with EN 60079-14

Electrical equipment used in potentially explosive workshops and storage areas must comply with EN 60079-14/ VDE 0165-1 "Explosive atmospheres - Part 14: Electrical installations design, selection and erection". All other general regulations issued by the responsible supervisory authorities and the Employer's Liability Insurance Association or any specifically issued for individual case are also applicable.

A plant subject to inspection is not permitted to be commissioned initially or following a significant modification until the plant has been inspected by an approved testing agency for correctness of assembly, installation, site conditions and safe operation taking into account the intended mode of operation. Devices compliant with directive 94/9/EC are permitted to be commissioned in accordance with the responsible supervisory authority. (see BetrSichV, Section 3, § 14)

Device marking

The device group and category are specified in the device marking.

The device marking is specified as follows:

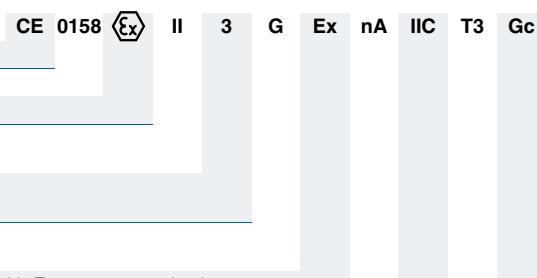

e.g. CE 0102 II 2G Ex d IIC T4 Gb

- CE conformity mark, CE stands for "Communauté Européenne" (French for "European Community")

The manufacturer declares by means of CE marking that the relevant product has been manufactured in accordance with all applicable regulations and requirements of directive 94/9/EC and the product has been subjected to the relevant conformity evaluation process.

-0102 Identification number for the supervisory authority, in the case of the products 1PS and 1MD5 this is the German Federal Testing Laboratory (PTB)

- Marking for prevention of explosions in accordance with directive 94/9/EC

Motors with Explosion Protection

Orientation

Overview (continued)

Temperature classes and groups

Combustible gases and vapors are divided into temperature classes according to their ignitability and into groups according to their spark ignition capacity. The marking of a three-phase motor with the codes for the type of protection, group and temperature class specifies that it can be used without danger in hazardous areas depending on the zone classification. The numerical sequence of the codes for the group and temperature class has been selected so that motors that satisfy the requirements for a certain group and temperature class also satisfy the requirements for lower groups and classes.

Temperature classes

Temperature class of electrical equipment	Maximum surface temperature of electrical equipment	Ignition temperature of gases or vapors
T1	450 °C	> 450 °C
T2	300 °C	> 300 °C
T3	200 °C	> 200 °C
T4	135 °C	> 135 °C
T5	100 °C	> 100 °C
T6	85 °C	> 85 °C

Examples of the assignment of combustible gases and vapors

Group	Temperature classes											
	T1		T2		T3		T4		T5		T6	
Material designation	Minimum ignition temperature °C											
IIA ¹⁾	Acetone	540	i-amyl acetate	380	Benzine			Acetaldehyde	140			
	Ethane	515	n-butane	365	Gasoline	2)						
	Ethyl acetate	460	n-butyl alcohol	340	Special benzine	2)						
	Ethyl chloride	510	Cyclohexanone	430	Diesel fuel	2)						
	Ammonia	630	1,2-dichloroethane	440	Heating oils	2)						
	Benzene	555	Acetic acid anhydride	330	n-hexane	240						
	Acetic acid	485										
	Carbon monoxide	605										
	Methane	595										
	Methanol	455										
	Methyl chloride	625										
	Naphthalene	520										
	Phenol	595										
IIB ¹⁾	Propane	470										
	Toluene	535										
	Town gas (illuminating gas)	560	Ethyl alcohol	425	Hydrogen sulfide	270	Ethyl ether	180				
IIC ¹⁾	Ethylene	425										
	Ethylene oxide	440										
	Hydrogen	560	Acetylene	305						Carbon disulfide	95	

¹⁾ Subgroups IIA, IIB and IIC must be specified for the Ex nA and Ex de types of protection described in this list in accordance with EN 60079-0 (2009).

²⁾ The minimum ignition temperature depends on the composition and lies between 220 and 300 °C, over 300 °C in special cases.

Overview (continued)

Operation of motors with type of protection "Dust explosion protection"

Potentially explosive atmospheres with dust can arise in industry and in agriculture. For a specific environment (Zone), a product (device or motor) is permitted to be used only if it is assigned to the appropriate device group and category (see the following table).

An important feature of dust protection is the IP degree of protection. Depending on the environmental conditions, differing requirements are placed on the dust-tightness of the enclosure.

For dust explosion protection, it is important to ensure that the surface temperature of the motors is limited to a value below the minimum ignition temperature of the combustible dust or a dust layer.

Dust explosion protection EN 50281-1-1/EN 50281-1-2

Equipment group	II		
Category	2D	3D	
Zone	21	22	
Dust group	IIIC Conductive dust	IIIB Non-conductive dust	IIIC Conductive dust
IP degree of protection	IP6x	IP5x	IP6x
Max. surface temperature	T130 °C		
Marking	II 2D Ex tb IIIC T130 °C Db	II 3D Ex tc IIIB T130 °C Dc	II 3D Ex tc IIIC T130 °C Dc
ATEX certification	EC type-examination certificate	EC Declaration of Conformity of the manufacturer	
IECEx certification	IECEx Certificate of Conformity	No IECEx certificate available	

Zone 22 non-conductive dust:

Can be ordered as an option (Zone 22 options) with LOHER CHEMSTAR 1PS0, 1PS1, 1PS5 and SIMOTICS XP 1MD5 motor series.

Zone 22 conductive dust:

Implemented and certified normally as Zone 21, the option for Zone 21 must be selected in this case.

Zone 21 non-conductive dust:

Handled and certified as for Zone 21 conductive dust.

Zone 21 conductive dust:

Can be ordered as an option (Zone 21 options) with LOHER CHEMSTAR 1PS1, 1PS5 and SIMOTICS XP 1MD5 motor series.

Hybrid mixtures

When dust explosion protection is combined with gas explosion protection, it is important to consider the possibility that hybrid mixtures can occur: hybrid mixtures are mixtures of flammable dusts with explosive gas/air atmospheres which can together create a dangerous explosive atmosphere if they occur at the same time. Changes can arise in the safety characteristics here, such as a change in the zone classification, increase in the explosion pressure, reduction in the minimum ignition energy and a reduction in the maximum temperatures to be observed.

For this reason, the relative characteristics must be considered both for gas (Zones 0, 1 and 2) and for dust (Zones 20, 21 and 22) where hybrid mixtures arise. It is necessary for a competent assessor to determine in the individual case whether the parameters determining ignition are unfavorably affected in a particular hybrid mixture. Motors with dual labeling for gas (G) and dust (D) may only be used in applications in which gas and dust occur simultaneously after prior examination of the properties of the hybrid mixtures by the user.

- Surface temperature of motors $< \frac{2}{3}$ the minimum ignition temperature of the dust/air mixture.

- Surface temperature of the motors $<$ minimum ignition temperature of dust layer (of 5 mm depth) -75 K.

The user determines the category and maximum permissible surface temperature based on the hazardous area and the type of dust.

Note:

Conductive or non-conductive dust changes the device category (see table below).

The motors are designed for ambient temperatures between -20 and +40 °C.

Maintaining explosion protection during normal operation

Electrical machines must be protected against overheating as a result of overload. The protection devices that can be considered depend on the operating mode, but also on the design and suitability of the electrical machine.

Overcurrent protection devices with inverse-time delayed tripping in accordance with EN 60947, e.g. motor circuit breakers in all phase conductors, must be set to the rated current of the motor. Furthermore, they should be selected such that the motor is thermally protected even under short-circuit conditions (i.e. with a blocked rotor). This requirement is regarded as fulfilled when the tripping time obtained from the tripping characteristic (starting temperature 20 °C) for the ratio I_A/I_N does not exceed the warm-up time t_E for the relevant ignition group.

Windings in a Δ connection should preferably be protected in such a way that the trip unit or relay is connected in series with the winding phases. When selecting and configuring the trip unit, the rated value of the phase current (i.e. 0.58 times the rated motor current) is to be taken as a basis. If, however, the trip unit is connected in the mains supply conductor, protective measures must be taken to ensure that sufficient motor protection is afforded when only one phase fails.

For pole-changing motors, inverse-time delayed trip units or relays must be provided for each speed level that must be mutually interlocked.

Thermal motor protection for direct temperature monitoring, e.g. with PTC thermistors, in combination with a certified monitoring device alone or in addition to overcurrent protection. Motors with thermal motor protection as sole protection are available on request.

The motors are only permitted to be used for continuous duty and not for normal, infrequently repeated start-ups in which no significant start-up temperature rise occurs. The values for temperature rise time t_E for the individual ignition groups and for the inrush current ratio I_A/I_N are specified on the rating plate of the respective motor and are stated in the test certificate from the German Federal Testing Laboratory.

SIMOTICS XP 1MD5 motor series, type of protection "Explosion-proof enclosure"

SIMOTICS XP motors of the 1MD5 series are surface-cooled, fully enclosed motors in type of protection "Explosion-proof enclosure" Ex d. They can be designed in accordance with the current VIK recommendation ("Verband der Industriellen Energie- und Kraftwirtschaft e. V.", the Association of the Industrial Energy and Power Industry).

The motors are marked in accordance with EN 60079-0 Ed. 2009 and EN 60079-1 with II 2G Ex de IIC T4 Gb for operation in Zone 1.

Housing and ventilation

Housing and fan for motors of the SIMOTICS XP 1MD5 series

Frame size	Housing			Bearing plates		Fan cover	Fan	Suitable for
	Material	Design of housing feet ¹⁾	Surface	Material	Flange ring on bearing plate			
71 ... 90	Cast-iron	Cast	With cooling fins	Cast-iron	Screwed on	Sheet steel	Plastic ³⁾	Both directions of rotation
100					Cast			
112		Screwed on				Screwed on ²⁾		
132 ... 160		Cast						
180 ... 280		Screwed on						
315							Aluminum ³⁾	
355							Steel ⁴⁾	

¹⁾ For designs with feet only.

²⁾ Special version for frame size 132.

³⁾ For specific operating conditions, the external fans can be constructed in aluminum for frame sizes 71 to 225 and in sheet steel for frame sizes 250 to 315. This applies in the case of increased coolant temperature in particular. The cooling air flow from NDE to DE must not be obstructed. The intake area in front of the fan cover must not be obstructed.

⁴⁾ Only one direction of rotation for 2-pole and 4-pole version.

Technical specifications (continued)

Protection against ingress of condensation

Condensation drainage holes must not be drilled into encapsulated explosion-proof motors, otherwise the type of protection can no longer be ensured. In frame size 250 and above, the explosion-proof encapsulated motors have separate chambers at the drive end (DE) and non-drive end (NDE) for collection of any condensation that may arise. This prevents possible damage to the winding as a result of condensation in the winding overhang spaces. In the case of smaller motors (frame sizes 71 to 225), the risk of adverse effects from condensation is countered by applying increased humidity protection to the winding insulation.

In the standard version, the motor can be used in environments with up to 80 % relative humidity without the need for further measures. With an appropriate coating of internal corrosion protection (e.g. order code **V10**), anti-condensation heater and stainless steel screws and plates (order codes **M13** and **W71**), the motor can be upgraded for a relative humidity of up to 100 %.

Terminal boxes

The design of the terminal boxes can be seen in the following figures. The number and size of the main and auxiliary terminals as well as their characteristic data can be obtained from the tables below. Terminal boxes in type of protection "Explosion-proof enclosure" Ex d IIC according to EN 60079-0 and EN 60079-1 can be supplied on request. Separate terminal boxes for main connections and accessories are available in type of protection "Explosion-proof enclosures" for auxiliary terminals for frame sizes 200 to 355 only.

Motors with Explosion Protection

SIMOTICS XP 1MD5 motor series

General information

Technical specifications (continued)

Electrical design

The SIMOTICS XP 1MD5 explosion-proof motors are equipped with 6 terminals. They can be operated in star or delta. The standard connection for all 400 V motors is delta connection. They are therefore suitable for 400 V Δ /690 VY. The 500 V motors are available both for 500 VY and for 500 V Δ , provided that one of the two variants is not preferred for winding reasons.

SIMOTICS XP motors are wound in accordance with temperature class F (155 °C). Normally, they are only utilized according to class B (130 °C). In accordance with EN 60034-1, in addition to the temperature class, the thermal utilization is also stamped on the rating plate if this value lies below that of the temperature class. The fixed-voltage motors of this series are stamped with "F – B". Temperature class F is only used by a few exceptions. They are indicated in the output tables and are stamped with "F".

The standard also requires that even with an unfavorable constellation, the temperature on the outer surface of the explosion-proof enclosure must not exceed the maximum permissible temperature for the respective temperature class. The 1MD5 motors are certified for T4. The maximum permissible surface temperature is therefore 120 °C.

Operation on a frequency converter

SIMOTICS XP motors can also be operated on frequency converters without any modifications to the electrical design because of the used type of winding with insulation system and impregnation. The maximum limits and parameters for converter-fed operation are summarized in this catalog.

For operation on a frequency converter, the motor must be fitted with PTC thermistors. These are installed in the stator winding and, in combination with a trip unit certified by the German Federal Testing Laboratory, they perform sole motor protection in the case of converter-fed operation. Motor circuit breakers can be dispensed with. PTC thermistors with a rated shutdown temperature of 145 °C (KL145) are normally used. Converter-fed motors of this type are normally stamped with duty type S1 or S9.

Mains-fed operation

Selection of the PTC thermistor for full motor protection (sole protection) in mains-fed operation is more complex because the load case "blocked shaft, motor draws full starting current" also has to be monitored. To protect the rotor, it may be necessary here to use only PTC thermistors with low tripping temperatures. The advantage is that all line duty types (S1 to S7) and converter-fed operation (S9) are covered. These motors are therefore stamped with S1 to S7 and S9. The larger the motor and the smaller the number of poles, the more difficult it is to achieve sole protection using PTC thermistors in mains-fed operation: due to the laws of increasing size, larger machines become ever more "rotor-critical". The sole protection limit for 4-pole motors typically lies in the region of frame size 280.

Voltage tolerances

The motors are tested at -10 % of rated voltage and 100 % of rated torque, as well as at +10 % of rated voltage and 100 % of rated torque which is determined at rated output and mean voltage. It is assumed that the voltage can vary within the range of specified tolerance, but during operation the mean voltage is mainly applied to the motor (e.g. 400 V). The rated current is therefore stamped as the current that flows at rated output and mean voltage. It is sufficient to verify during testing that all temperature limits are complied with at rated torque throughout the voltage range. The motor is permitted to be operated continuously within this range.

○ Without additional charge

For dual voltages 230 V/400 V, 220 V/380 V, 400 V/690 V

or 380 V/660 V:

- For motors for converter-fed operation, the converter rating plate is stamped with 380 V or 400 V.

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series

General information

Technical specifications

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series, type of protection "Explosion-proof enclosure"

LOHER CHEMSTAR and VARIO motors of the 1PS4 and 1PS5 series are surface-cooled motors in type of protection "Explosion-proof enclosure" Ex d. The CHEMSTAR motors can be designed in accordance with the current VIK recommendation ("Verband der Industriellen Energie- und Kraftwirtschaft e. V.", the Association of the Industrial Energy and Power Industry).

The motors are marked in accordance with EN 60079-0 Ed.2009 and EN 60079-1 with II 2G Ex de IIB T3-6 Gb or II 2G Ex de IIC T3-6 Gb for operation in Zone 1.

General technical specifications

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motors

Motor type	D..L/D..W
Frame size	71 ... 500
Outputs	0.25 ... 1120 kW
Temperature class	T1 ... T6
Type of protection	II 2G Ex d(e) IIC Gb, IEC/EN 60079-0, IEC/EN 60079-1
Ex Zones	Gas Zone 1 optional, Dust Zone 22/21
Guidelines	94/9/EC (ATEX 95)
Cooling	Surface-cooled, water-jacket-cooled on request
No. of poles	2- ... 12-pole, multi-pole + pole-changing versions on request
Voltage/frequency	All common voltages, and in 50 Hz and 60 Hz special designs on request
Degree of protection	IP55 to IP68
Type of construction	All common types of construction + special types of construction
Housing	Cast-iron or steel
Insulation	Class F utilized according to B
Special versions	
<ul style="list-style-type: none"> • For outdoor temperatures -55 to +60 °C (other temperatures on request) • Site altitude up to 3000 m (> 3000 m on request) • Modified windings, for example, for increased ambient temperatures, site altitude for optimum electrical values • Permanent load S1 as well as partial load operation, e.g. S2/S3/S6 • Drive-end located bearing; special bearing for increased axial/radial forces • Large electrical variance, such as reduced starting current, modified torque curve, star-delta start-up, etc. • CHEMSTAR: copper rotor as an option • Metal fan in aluminum, steel or brass • Monitoring devices such as Pt100, PTC, KTY winding/bearing, vibration monitoring, etc. • Country-specific certificates such as EAC (Eurasian Customs Union), NEPSI (China), China Energy Label, CCOE (India), IECEX (international) • Version for offshore, on-deck and/or marine classifications • Combination with brakes + rotary encoder + forced ventilation • Enlarged connection system and/or larger terminal box for large cable cross-sections 	

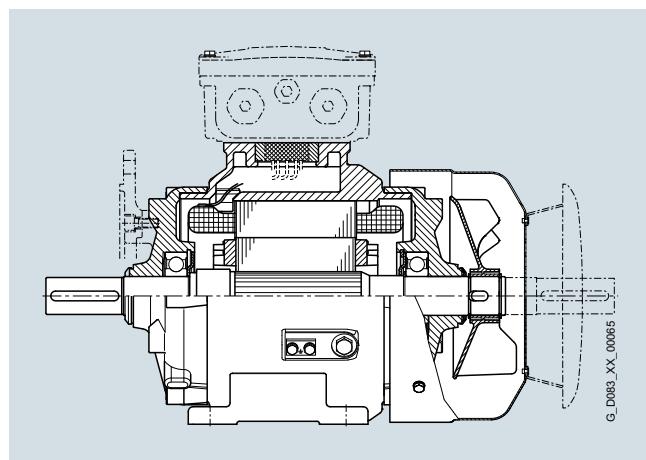

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series

General information

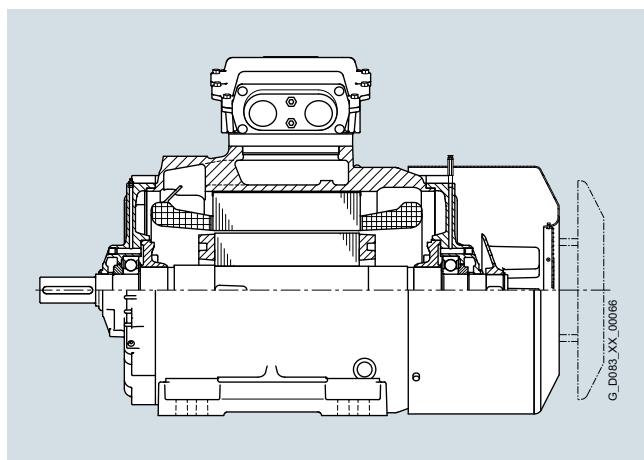

Technical specifications (continued)

Mechanical design

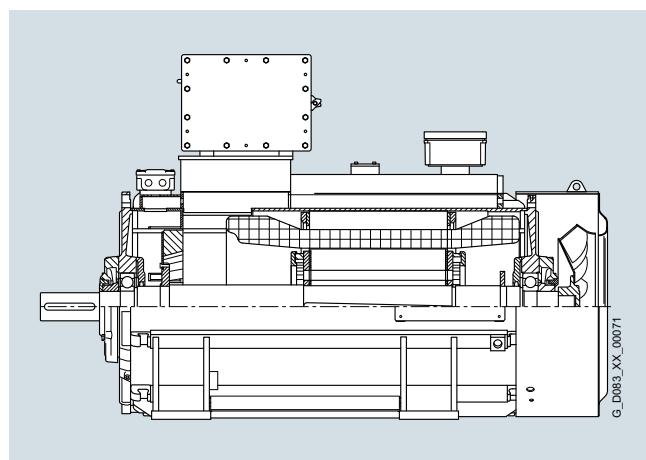

Sectional view of CHEMSTAR 1PS5 three-phase motor,
frame sizes 71 to 132

Example: 1PS5131-0BD6.-4AA3 (*motor type: DNGW-132SR-02*)
7.5 kW, 2-pole

Sectional view of CHEMSTAR 1PS5 three-phase motor,
frame sizes 160 to 315

Example: 1PS5316-0BD6.-4AA3 (*motor type: DNGW-315LL-02*)
200 kW, 2-pole

Sectional view of VARIO 1PS4/5 three-phase motor,
frame sizes 355 to 500

Example: 1PS4356-0BH6.-4AA0 (*motor type: DNGL-355LB-02*)
315 kW, 2-pole

Housing, ventilation

Housing and fan for motors of the LOHER CHEMSTAR and VARIO 1PS5/1PS5 series

Frame size	Housing Material	Design of housing feet ¹⁾	Surface	Bearing plates Material	Fan cover Material	Fan ²⁾ Material
LOHER CHEMSTAR						
71 ... 160	Cast-iron	Cast	With cooling fins	Cast-iron	Sheet steel	Plastic
180 ... 315		Screwed on				Aluminum
355		Cast				Steel
LOHER VARIO						
355 ... 450	Steel	Welded	With cooling fins	Cast-iron	Sheet steel	Steel
500 ³⁾				Steel, bearing hub in cast-iron		

¹⁾ For designs with feet only.

²⁾ For specific operating conditions, the external fans can be constructed in aluminum for frame sizes 71 to 225 and in sheet steel for frame sizes 250 to 315. This applies in the case of increased coolant temperature in particular. The cooling air flow from NDE to DE must not be obstructed. The intake area in front of the fan cover must not be obstructed.

³⁾ Suitable for both directions of rotation, but LOHER VARIO 2- and 4-pole are only suitable for one direction of rotation.

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series

General information

Technical specifications (continued)

Protection against ingress of condensation

Condensation drainage holes must not be drilled into encapsulated explosion-proof motors, otherwise the type of protection can no longer be ensured. In frame size 250 and above, the explosion-proof encapsulated motors have separate chambers at the drive end (DE) and non-drive end (NDE) for collection of any condensation that may arise. This prevents possible damage to the winding as a result of condensation in the winding overhang spaces. In the case of smaller motors (frame size range 71 to 225), the risk of adverse effects from condensation is countered by applying increased humidity protection to the winding insulation.

In the standard version, the motor can be used in environments with up to 80 % relative humidity without the need for further measures. For operation at higher humidity levels, the hollow spaces and internal parts can be finished with special paint, which enables operation at up to 100 % humidity to be achieved as an option. In the CHEMSTAR motor series, an anti-condensation heater is not necessary in most cases. This is known as a "tropical insulation version".

Explosion-proof three-phase motors in type of protection Ex d for ambient temperatures down to -55 °C

Motors of the 1PS4/1PS5 series can also be designed for hazardous areas with ambient temperatures down to -55 °C.

Advantages

The motors can be used in hazardous areas at ambient temperatures down to -55 °C without the need for expensive additional heating. This saves on expensive switching and monitoring devices, the associated cables and leads, as well as heating energy.

Explosion protection	In accordance with European standards EN 60079-0, EN 60079-1, EN 60079-7
Marking	II 2G Ex de IIB T3-6 Gb or II 2G Ex de IIC T3-6 Gb
Certifications	EC type-examination certificate
Ambient temperature range	-55 to +60 °C
Type series	CHEMSTAR and VARIO 1PS4/1PS5 motors
Rated voltage U_{rated}	Up to 690 V
Design	Selection of materials for temperatures down to -55 °C Group IIC or IIB Optional version possible Motors with built-on components, such as brakes and speed encoders, cannot be supplied for ambient temperatures down to -55 °C.
Note	The fan must not be blocked by ice or snow.

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series

General information

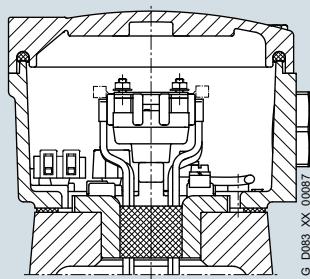

Technical specifications (continued)

Terminal boxes

The terminal boxes comply with the type of protection "Increased safety" Ex e in accordance with EN 60079-0 and EN 60079-7. The housings are made of cast-iron and designed to IP55 degree of protection in accordance with EN 60034-5. The terminals are therefore protected from touch, dust deposits and water jets from any direction.

The position of the terminal box and cable entries can be obtained from the tables below. In frame size 90 and above, the terminal boxes can be rotated by 90° which allows the incoming supply cable to be fed in from different sides. In frame sizes 71 and 80, the terminal box can only be rotated subsequently in an authorized specialist workshop (due to opening the explosion-proof enclosure).

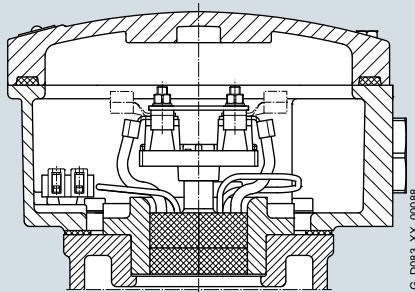

Figure 1 Terminal box for LOHER CHEMSTAR frame sizes 71 to 112

Auxiliary terminal box is not possible.

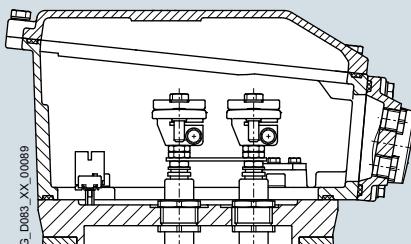

Monitoring devices or anti-condensation heaters are connected via auxiliary terminals in the terminal box. In frame size 132 and above, the auxiliary terminals can be installed in an auxiliary terminal box in type of protection Ex e II mounted on the side of the terminal box. The design of the terminal boxes can be seen in the schematic diagrams. The number and size of the main and auxiliary terminals as well as their characteristic data can be obtained from the tables below. Terminal boxes in type of protection "Explosion-proof enclosure" Ex d IIC according to EN 60079-0 and EN 60079-1 can be supplied on request. Separate terminal boxes for main connections and accessories are available in type of protection "Explosion-proof enclosure" for auxiliary terminals for frame sizes 200 to 500 only.

Figure 2 Terminal box for LOHER CHEMSTAR frame sizes 132 to 225

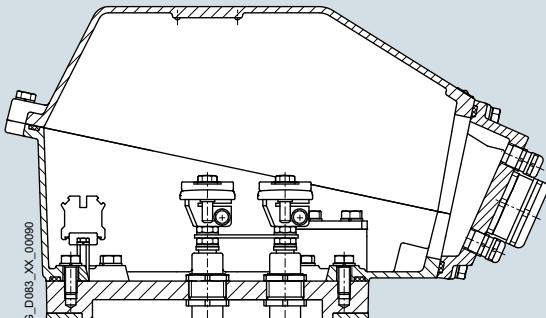

Frame sizes 132 to 160, 1 auxiliary terminal box Ex e (**W72, M52**) is possible, frame sizes 180 to 225, 2 auxiliary terminal boxes Ex e (**W72, M52**) are possible.

Figure 3 Terminal box for LOHER CHEMSTAR frame sizes 250 to 280

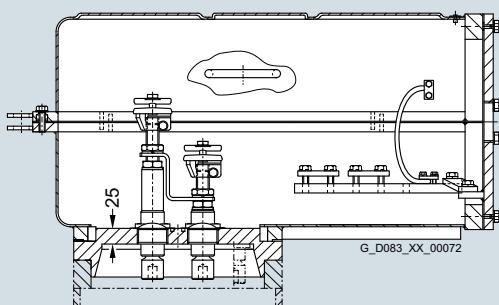

3 auxiliary terminal boxes Ex e (**W72, M52**) are possible.

Figure 4 Terminal box for LOHER CHEMSTAR frame sizes 315 to 355

3 auxiliary terminal boxes Ex e (**W72, M52**) are possible.

Figure 5 Terminal box for LOHER VARIO frame sizes 355 to 500

With the VARIO connection system, the auxiliary terminal boxes (max. 3) are mounted on the housing.

For versions with terminal box Ex d, no auxiliary terminal boxes are possible for frame sizes 71 to 112 and 1 auxiliary terminal box Ex d (**V43**) is possible for frame sizes 132 to 355.

315					2 × M100 × 2 2 × 4"	2 × M100 × 2 2 × 4"

Additional entry threads, e.g. for PTC thermistor, heating:

- Ex e II: M20 × 1.5/D = 6 up to 12 mm
- Ex d IIC: M20 × 1.5/D = 6 up to 12 mm

Entry threads are sealed on delivery with certified plugs, cable glands can be ordered separately.

¹⁾ Rated voltage / max. working voltage 400 V / 440 V.

²⁾ Maximum conductor cross-section with cable lug.

³⁾ Alternatively, larger studs for higher rated current.

⁴⁾ Number and size of entry threads according to DIN 42925.

⁵⁾ Cable glands suitable for unshielded/non-reinforced cables and leads. Option K54 (Ex e), W91 (Ex d).

⁶⁾ Other threads, number and size on request.

Explosion-proof terminal boxes with a cast auxiliary terminal box only (max. 12 × 4 mm²),
for number and size of entry threads, see table "Cable glands for 1PS5 motors".

¹⁾ Rated voltage / max. working voltage 400 V / 440 V.

²⁾ Only in conjunction with enlarged terminal box.

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series

General information

Technical specifications (continued)

Electrical design

The outputs and electrical values listed in the selection tables can be changed by modifying the configuration. For example, if a copper cage rotor is used in place of a die-cast aluminum rotor, an even higher degree of efficiency can be achieved.

The insulation system of this motor series is suitable for line voltages up to 1000 V. The connection system (terminal box, terminals) is designed for rated voltages up to 1000 V.

The explosion-proof motors are equipped with 6 terminals. They can be operated in star or delta. The standard connection for all 400 V motors is delta connection. They are therefore suitable for 400 V Δ /690 VY. The 500 V motors are available both for 500 VY and for 500 V Δ , provided that one of the two variants is not preferred for winding reasons.

Motors of the 1PS5 series are wound in accordance with temperature class F (155 °C). Normally, they are only utilized according to class B (130 °C). In accordance with EN 60034-1, in addition to the temperature class, the thermal utilization is also stamped on the rating plate if this value lies below that of the temperature class. The fixed-voltage motors of this series are therefore stamped with "F – B". Temperature class F is only used by a few exceptions. They are indicated in the selection and ordering data and are stamped with "F".

The standard also requires that even with an unfavorable constellation, the temperature on the outer surface of the explosion-proof enclosure must not exceed the maximum permissible temperature for the respective temperature class. The motors in this list are certified for T4. The maximum permissible surface temperature is therefore 135 °C.

Operation on a frequency converter

General use of "Overcoat" double-layer enameled wire, optimized impregnation techniques and partial use of pre-formed coils with VARIO motors ensures that most motors can be converter-fed without modification of the electrical design. The maximum limits and parameters for converter-fed operation are summarized in this catalog.

For operation on a frequency converter, the motor must be fitted with PTC thermistors. These are installed in the stator winding and, in combination with a trip unit certified by the German Federal Testing Laboratory, they perform sole motor protection in the case of converter-fed operation. Motor circuit breakers can be dispensed with. PTC thermistors with a rated shutdown temperature of 145 °C ("KL145") are normally used. Converter-fed motors of this type are normally stamped with duty type S1 or S9.

Mains-fed operation

Selection of the PTC thermistor for full motor protection (sole protection) in mains-fed operation is more complex because the load case "blocked shaft, motor draws full starting current" also has to be monitored.

To protect the rotor, it may be necessary here to use only PTC thermistors with low tripping temperatures. The advantage is that all line duty types (S1 to S7) and converter-fed operation (S9) are covered. These motors are therefore stamped with S1 to S7 and S9. The larger the motor and the smaller the number of poles, the more difficult it is to achieve sole protection using PTC thermistors in mains-fed operation: due to the laws of increasing size, larger machines become ever more "rotor-critical". The sole protection limit for 4-pole motors typically lies in the region of frame size 280.

Voltage tolerances

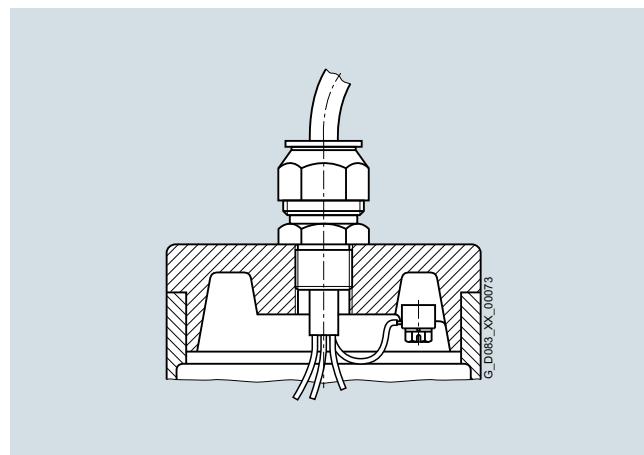

The motors are tested at -10 % of rated voltage and 100 % of rated torque, as well as at +10 % of rated voltage and 100 % of rated torque which is determined at rated output and mean voltage. It is assumed that the voltage can vary within the range of specified tolerance, but during operation the mean voltage is mainly applied to the motor (e.g. 400 V). The rated current is therefore stamped as the current that flows at rated output and mean voltage. It is sufficient to verify during testing that all temperature limits are complied with at rated torque throughout the voltage range. The motor is permitted to be operated continuously within this range.

Three-phase motors with external cables

Three-phase motors with externally routed connecting cables are used in machines or ventilation systems in which the electrical connections are routed via a separately mounted terminal box due to the space constraints.

Design

The motors correspond to the surface-cooled versions in this catalog. A gland plate is mounted in place of the terminal box (Options G48/G49).

Explosion protection: II 2G Ex d IIC T4 Gb

Frame sizes and types of construction: see dimensional drawings

Permissible coolant temperature: -20 to +50 °C

Connection cable (standard design): NSSHöu-J

The free length of connection cable must be specified when ordering. The standard length is 1.5 m. Two or more cable entries are used in the case of pole-changing or single-speed motors with rated current > 70 A.

Rated voltage: 1000 V

Max. operating temperature at conductor: -20 to +80 °C

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series

General information

Technical specifications (continued)

Motors with built-on backstop

If reverse motion of the drive has to be prevented following switch-off, three-phase motors with mechanical backstop can be used. Backstops are maintenance-free and have individual spring-loaded clamping elements. The backstops of the type CSK are supplied with permanent lubrication. The clamping elements have a tendency to lift. In backstops of the FXM type series, the clamping elements lift automatically after approach due to the centrifugal force. Wear therefore does not occur at rated speed of the motor.

The backstop is not permitted to be used as protection against rotation in the wrong direction caused by switching despite the interlock. The direction of rotation must be specified on ordering.

The motor outputs are as specified in the selection tables in this catalog. The assignment of backstops to frame sizes is specified in the table below. Frame sizes 90 to 112 have the same dimensions as standard motors. Dimensional drawings are available for the larger types on request.

Axially-mounted forced ventilation

Forced ventilation with axially-mounted fans is mainly used with converter-fed operation. It serves to increase the motor utilization while lowering the sound level in accordance with the synchronous speed. Motors with forced ventilation are designed for rated voltage ranges in accordance with the following table. The data is shown on the rating plate on the external fan or on the motor with forced ventilation.

Degree of protection: IP55, available as a special version up to IP66.

Rated voltage ranges for forced ventilation on motors of the 1PS4 and 1PS5 series

355	4, 6	FXM 140-50 SX	On request

With the backstops listed in the table above, motors of frame sizes 90 to 355 can be supplied in IP55 or IP56 degree of protection. Higher degrees of protection on request.

Special versions for higher ambient temperatures, increased vibration loading on request.
Retrofitting of forced ventilation is only possible following the prior consent of Siemens Ruhstorf.

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series

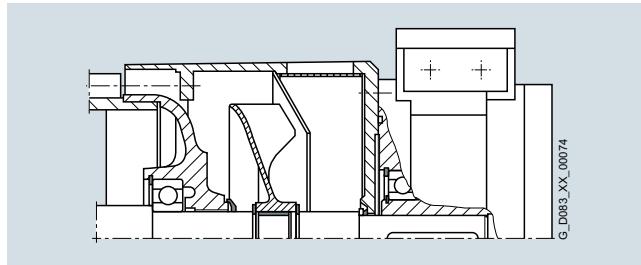

General information

Technical specifications (continued)

Built-on single-disk spring-operated brake

Design

The explosion-proof single-disk spring-operated brake is attached to the reinforced fan cover and the extended motor shaft. Otherwise, in terms of their mechanical design, the motors are identical to the surface-cooled motors in this catalog.

Voltage and frequency: Motors with a built-on brake are supplied for the voltages and frequencies specified in the output tables.

Output: The outputs specified in the selection tables are applicable to S4 duty type in accordance with EN 60034-1.

Thermal motor protection: The motors have 3 embedded PTC thermistors and are designed for sole protection in combination with a trip unit.

Possible brake size: See table of outputs

Connection: The brake is connected in the terminal box mounted on the brake.

Brake: Type 76...-B

Degree of protection acc. to EN 60034-5: IP67

Permissible ambient temperatures: -20 to +40 °C

Type of protection acc. to EN 60079-0, EN 60079-1 and EN 60079-7: II 2G Ex de IIC T5 Gb

Terminal box: II 2G Ex e II Gb

In special version with dust protection II 2D T100_C, DMT02 ATEX E 122 approval

AC connection:

Preferred voltage 230 V 1 AC, frequency 40 to 60 Hz or

DC connection:

Preferred voltages 24 V DC, 205 V DC

The single-disk spring-operated brake is an electromagnetic unit for dry-running operation. An electromagnetic field is used to release the brake which is applied using spring force.

The spring-operated brake brakes at zero current and releases when an AC or DC voltage is applied. The brake can be operated on the AC or DC side when alternating current is flowing.

The brake is equipped with a microswitch and 2 thermostatic switches. These switching elements are dimensioned for 250 V AC, 2.5 A inductive. In the control line of the motor contactor, the microswitch prevents the motor starting in opposition to the unreleased brake. The microswitch is not permitted to be used in lifting gear and elevators. The thermostatic switches (NC) connected in series with the microswitch (NO) interrupt the control circuit as soon as an impermissible temperature rise occurs in the brake. The motor is only permitted to be controlled via the microswitch of the spring-operated brake to ensure that it can never start in opposition to the unreleased brake. The brake can be equipped with a manual release on request, which allows the brake to be released manually.

If the motor is only ordered and used for S1 duty type and the built-on brake is only required as a holding brake, the motor can be protected with a motor circuit breaker in accordance with DIN VDE 0165.

- Cooling: self-ventilated (IC 411)
- Insulation: thermal class 155 (temperature class F), IP55 degree of protection, utilization in accordance with thermal class 130 (temperature class B), S1-100 %
- Type of protection: "Explosion-proof enclosure" according to EN 60079-1; 2007: CE 0102 II 2G Ex d(e) IIC T4 Gb

8-pole: 750 rpm at 50 Hz

¹⁾ Outside the IE code classification according to IEC 60034-30.

²⁾ Variant can be supplied as Ex nA, Loher type changes to ANGK....

³⁾ Only possible with 690 V, 60 Hz (values apply to 690 V).

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series

Motors with High Efficiency IE2 in cast-iron and steel versions

T_B = Braking torque in Nm

The maximum permissible number of starts is limited for all motors to 20 c/h. For conditions for a higher number of starts, please inquire.

In the case of a number of starts of > 1 per hour, the brake dimensioning must be checked.

Conversion factor "c/h · J" depending on the duty cycle.

Standard brake supply: 230 V, 1-phase AC

¹⁾ Outside the IE code classification according to IEC 60034-30.

Example 1

Motor: **1PS5113- RB..-4BA0**

(motor type: **DBGW-112MB-04**), S4, 40 %, 120 c/h

Required: ΣJ

Solution: $c/h \cdot J = 7.5$ from table

$$\Sigma J = 7.5/120 = 0.0625 \text{ kgm}^2$$

- This order code only determines the price of the version – Additional plain text is required.
- ✓ With additional charge
- O. R. On request
- Not possible

For dual voltages 230 V/400 V, 220 V/380 V, 400 V/690 V or 380 V/660 V:
 - For motors for converter-fed operation, the converter rating plate is stamped with 380 V or 400 V.
 - For motors with a Dahlander circuit, the lower voltage is generally specified.
 Voltages not listed in the catalog are only available on request.
 Standard brake supply voltage: 230 V, 1-phase AC

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series

Special versions

- Standard version
 - Without additional charge
 - This order code only determines the price of the version –
Additional plain text is required.
 - With additional charge
 - O.R. Possible on request
 - Not possible

1) Coding in 8th position of the article number, for
LOHER CHEMSTAR = 2.

2) Acceptance tests must be selected additionally. For example, for the first motor select **F83** or **F93**, and for each additional motor **F01**. Inclusive of costs for certification authority and inspector, and shaft test if specified by certification authority. LOHER CHEMSTAR for essential drive is possible on request as an ETO option (Engineer To Order) without an option code.

Motors with Explosion Protection

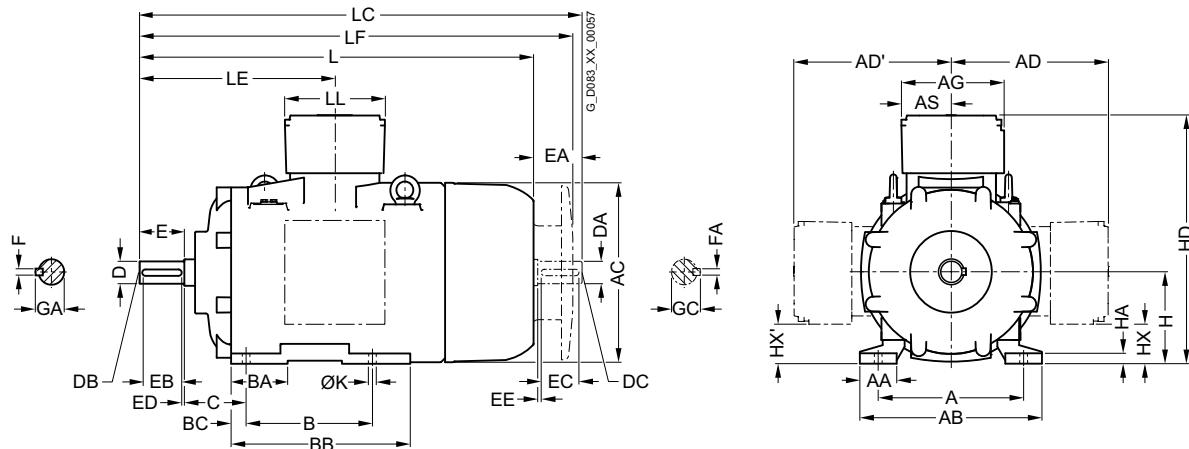

LOHER CHEMSTAR and VARIO 1PS4 and 1PS5 motor series

Dimensions for frame sizes 71 B to 250 M

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS1 motor series

General information

Technical specifications

LOHER CHEMSTAR and VARIO 1PS1 motor series, type of protection "Non-sparking"

The LOHER CHEMSTAR and VARIO motors of the 1PS1 series are fully-enclosed, surface-cooled motors in the "Non-sparking" type of protection Ex nA II. In these motors, the type of construction prevents the occurrence of arcing, sparks or hot surfaces during normal operation, ensuring that the required level of safety is maintained. The CHEMSTAR motors can be designed in accordance with the applicable VIK specifications ("Verband der Industriellen Energie- und Kraftwirtschaft e. V.", the Association of the Industrial Energy and Power Industry).

The motors are assigned to device group II – category 3G (corresponding to Zone 2) and are approved and optimized for use in hazardous areas of Zone 2 in accordance with EN 60079-0 and EN 60079-15. The motors are marked according to EN 60079-15 with II 3G Ex nA IIC Gc for use in Zone 2.

General technical specifications

LOHER CHEMSTAR and VARIO 1PS1 motors

<i>Motor type</i>	<i>A..K</i>
Frame size	90 ... 500
Outputs	0.25 ... 1120 kW
Temperature class	T3
Type of protection	II 3G Ex nA IIC Gc IEC/EN 60079-15
Ex Zones	Gas Zone 2 optional, Dust Zone 22/21
Guidelines	94/9/EC (ATEX 95)
Cooling	Surface-cooled, water-jacket-cooled on request
No. of poles	2 ... 12-pole, multi-pole + pole-changing versions on request
Voltage/frequency	All common voltages, and in 50 Hz and 60 Hz special designs on request
Degree of protection	IP55 to IP68
Type of construction	All common types of construction + special types of construction
Housing	Cast-iron or steel
Insulation	Class F utilized according to B
Special versions	
<ul style="list-style-type: none"> • For outdoor temperatures -55 to +60 °C (other temperatures on request) • Site altitude up to 3000 m (> 3000 m on request) • Modified windings, for example, for increased ambient temperatures, site altitude for optimum electrical values • Permanent load S1 as well as partial load operation, e.g. S2/S3/S6 • Drive-end located bearing; special bearing for increased axial/radial forces • Large electrical variance, such as reduced starting current, modified torque curve, star-delta start-up, etc. • CHEMSTAR: copper rotor as an option • Metal fan in aluminum, steel or brass • Monitoring devices such as Pt100, PTC, KTY winding/bearing, vibration monitoring, etc. • Country-specific certificates such as EAC (Eurasian Customs Union), NEPSI (China), China Energy Label, CCOE (India), IECEX (international) • Version for offshore, on-deck and/or marine classifications • Combination with brakes + encoder + forced ventilation • Enlarged connection system and/or larger terminal box for large cable cross-sections 	

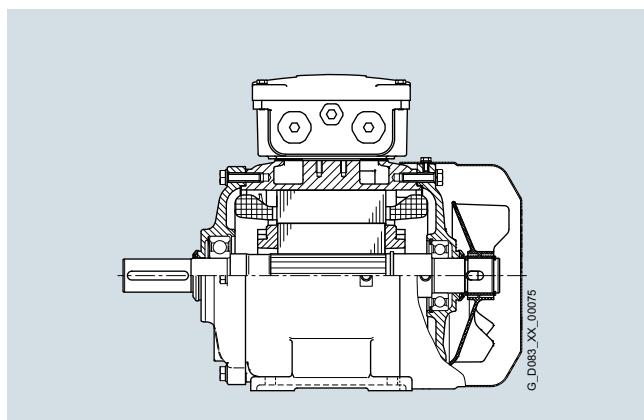

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS1 motor series

Technical specifications (continued)

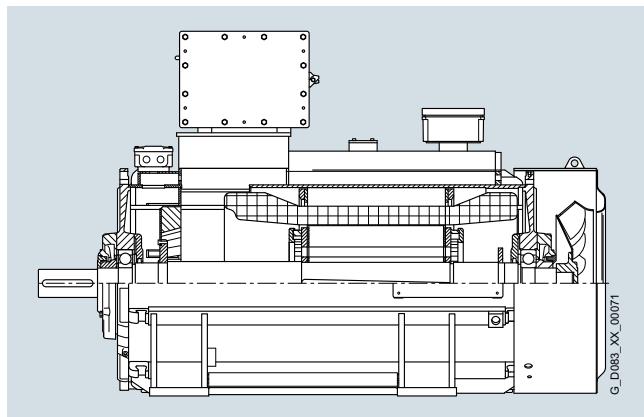

Mechanical design

Sectional view of CHEMSTAR 1PS1 three-phase motor,
frame sizes 90 to 200 LB
Example: 1PS1131-0BD0.-0AA3 (*motor type: ANGK-132SR-02*)
7.5 kW, 2-pole

Sectional view of CHEMSTAR 1PS1 three-phase motor,
frame sizes 225 to 355
with regreasing device (frame size 315 and above)
Example: 1PS1316-0BD0.-0AA3 (*motor type: ANGK-315LL-02*)
200 kW, 2-pole

Sectional view of VARIO three-phase motor, frame sizes 355 to 500,
with regreasing device
Example: 1PS1357-0BH0.-0AA2 (*motor type: ANSK-355LC-02*)
355 kW, 2-pole

Housing, ventilation

Housing and fan for motors of the LOHER CHEMSTAR and VARIO 1PS1 series

Frame size	Housing Material	Design of housing feet ¹⁾	Surface	Bearing plates Material	Fan cover Material	Fan ²⁾ Material
LOHER CHEMSTAR						
90 ... 160	Cast-iron	Cast	With cooling fins	Cast-iron	Sheet steel	Plastic
180 ... 280		Screwed on				
315						Aluminum
355		Cast				Steel
LOHER VARIO						
355 ... 450	Steel	Welded	With cooling fins	Cast-iron	Sheet steel	Steel
500 ³⁾				Steel, bearing hub in cast-iron		

¹⁾ For designs with feet only.

²⁾ For specific operating conditions, the external fans can be constructed in aluminum for frame sizes 71 to 225 and in sheet steel for frame sizes 250 to 315. This applies in the case of increased coolant temperature in particular. The cooling air flow from NDE to DE must not be obstructed. The intake area in front of the fan cover must not be obstructed.

³⁾ Suitable for both directions of rotation, but LOHER VARIO 2- and 4-pole are only suitable for one direction of rotation.

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS1 motor series

General information

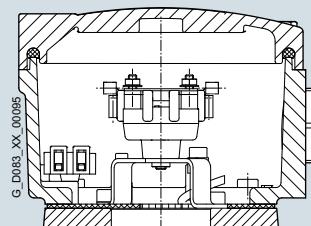

Technical specifications (continued)

Terminal boxes

The installed terminal boxes are also marked and certified as "Non-sparking". Ex nA terminal boxes of the CHEMSTAR and VARIO series are identical in construction to the Ex e "Increased safety" connection system. In accordance with the current, harmonized edition, EN 60079-0 Edition 2009, the gas for the type of protection Ex test must be specified in the case of type of protection "Non-sparking". The CHEMSTAR and VARIO series are generally certified for the highest class as per "IIC". They are marked in accordance with the EC directive (94/9/EC) with II 3G Ex nA IIC T3 Gc. Compliance with the regulations is documented here with an EC Declaration of Conformity.

The terminal boxes comply with type of protection "Increased safety" Ex e II. The housings are made of cast-iron and designed to IP55 degree of protection in accordance with EN 60034-5. The terminals are therefore protected from touch, dust deposits and water jets from any direction.

Figure 1 Terminal box for LOHER CHEMSTAR frame sizes 90 to 112

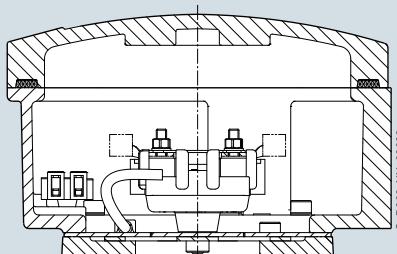

No auxiliary terminal boxes Ex e (**W72, M52**) are possible.

The position of the terminal box and cable entries can be obtained from the tables below. Terminal boxes can be rotated by 90° which allows the incoming supply cable to be fed in from different sides.

Monitoring devices or anti-condensation heaters are connected via auxiliary terminals in the terminal box. In frame size 132 and above, the auxiliary terminals can be installed in an auxiliary terminal box that is mounted on the side of the terminal box corresponding to the type of protection of the motor. The design of the terminal boxes can be seen in the schematic diagrams. The number and size of the main and auxiliary terminals as well as their characteristic data can be obtained from the tables below.

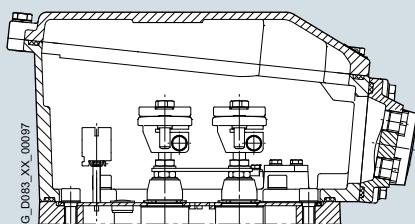

2

Figure 2 Terminal box for LOHER CHEMSTAR frame sizes 132 to 225

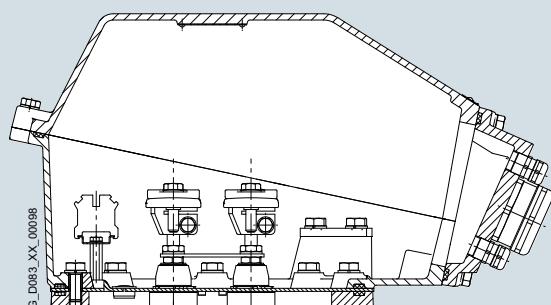

Frame sizes 132 to 160, 1 auxiliary terminal box Ex e (**W72, M52**) is possible, frame sizes 180 to 225, 2 auxiliary terminal boxes Ex e (**W72, M52**) are possible.

Figure 3 Terminal box for LOHER CHEMSTAR frame sizes 250 to 280

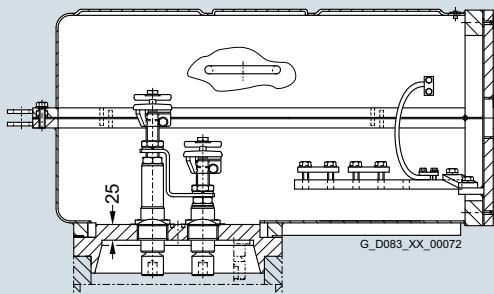

3 auxiliary terminal boxes Ex e (**W72, M52**) are possible.

Figure 4 Terminal box for LOHER CHEMSTAR frame sizes 315 to 355

3 auxiliary terminal boxes Ex e (**W72, M52**) are possible.

Figure 5 Terminal box for LOHER VARIO frame sizes 355 to 500

With the VARIO connection system, the auxiliary terminal boxes (max. 3) are mounted on the housing.

For motors of type series 1PS1 CHEMSTAR and VARIO, the terminal pins are fitted with round terminals in accordance with DIN 46223.

Entry thread for PTC thermistor, heating: M20 × 1.5/D = 6 up to 12 mm

The entry threads are sealed on delivery with certified plugs.

The terminal boxes will only be supplied with cable glands in accordance with the table if specially ordered.

Special cable glands can be fitted on request.

¹⁾ Rated voltage / max. working voltage 400 V/440 V

²⁾ Maximum conductor cross-section with cable lug.

³⁾ Alternatively, larger studs for higher rated current.

⁴⁾ Materials used for standard gland: polyamide

⁵⁾ Other threads, number and size on request.

⁶⁾ Number and size of entry threads according to DIN 42925.

⁷⁾ Cable glands suitable for the infill of unshielded/non-reinforced cables and leads.

⁸⁾ Cable glands for NPT thread on request.

⁹⁾ Undrilled gland plate.

Motors with Explosion Protection

LOHER CHEMSTAR and VARIO 1PS1 motor series

General information

Technical specifications (continued)

Electrical design

The outputs and electrical values listed in the selection tables can be changed by modifying the configurations. For example, if a copper cage rotor is used in place of a die-cast aluminum rotor, an even higher degree of efficiency can be achieved.

The insulation system of this motor series is suitable for line voltages up to 1000 V. The connection system (terminal boxes, terminals) is designed for rated voltages up to 1000 V, including frame size 355 for CHEMSTAR motors.

The motors are equipped with 6 terminals. They can be operated in star or delta. The standard connection for all 400 V motors is delta connection. They are therefore suitable for 400 V Δ /690 VY and for Y- Δ starting at 400 V. The 500 V motors are available both for 500 VY and for 500 V Δ , provided that one of the two variants is not preferred for winding reasons.

Motors of the 1PS1 series are wound in accordance with temperature class F (155 °C). Normally, they are only utilized according to Class B (130 °C). Exceptions are indicated in the selection and ordering data. In accordance with EN 60034-1, in addition to the temperature class, the thermal utilization is also stamped on the rating plate if this value lies below that of the temperature class. The motors of this series are therefore stamped with "F – B", and those indicated are stamped with "F".

Operation on a frequency converter

General use of "Overcoat" double-layer enameled wires and optimized impregnation techniques ensures that most motors in this series can be converter-fed without modification of the electrical design. The standard requires that the motor manufacturer conducts an initial type test using the original converter. Converter-fed motors of the 1PS1 series are fitted with PTC thermistors (CHEMSTAR) or Pt100 (VARIO). These temperature sensors in combination with a trip unit certified by the German Federal Testing Laboratory perform sole temperature monitoring in the case of converter-fed operation. Motor circuit breakers can be dispensed with. PTC thermistors with a rated shutdown temperature of 145 °C ("KL145") are normally used. Other PTC thermistors can also be installed in the motor, e.g. prewarning sensors.

Acceptance testing of explosion-proof motors of type of protection Ex nA II T

For dimensioning and for acceptance testing, with regard to the heat rise of all parts of the machine, the most unfavorable value is used. Motors of the 1PS1 series are certified for temperature class T3. None of the components, even those inside the housing (e.g. rotor cage winding), are permitted to exceed a temperature of 200 °C. The winding temperature is limited by the temperature class (e.g. "F": 145 °C). The reason for the above-mentioned initial test on the original converter is normally to establish compliance with the temperature limits for the motor with type of protection Ex nA II T.

Special cases "blocked shaft" and "starting":

Type of protection Ex nA II T excludes these two special cases. Limit temperatures are permitted here that do not take into account the temperature class. Even though "blocked shaft" and "starting" are excluded, a motor of the type of protection Ex nA II T is not permitted to be implemented for heavy starting. These motors are only permitted to be operated on soft-starting devices under the following conditions:

- The soft-starting device has been function-tested by the German Federal Testing Laboratory
- A motor circuit breaker must be provided as a minimum of protection
- The duty type does not give rise to expectations of a significant increase in temperature as a result of the starting procedure (e.g. pump drives with a low moment of inertia)

Operating modes

Mains-fed operation	Frame size	0	Order code
Converter-fed operation, standard insulation ³⁾	90 ... 450	1	–
Converter-fed operation with special insulation (derating approx. 5 %) ³⁾	160 ... 500	2	–

Mains-fed operation, pre-formed coil	Frame size	3	Order code
Converter-fed operation, pre-formed coil	450 ... 500	4	–

Voltages	Frame size	0	Order code
690 V, 50 Hz	355 ... 500	0	–
230 V/400 V, 50 Hz	90 ... 112	1	–
500 VY, 50 Hz	90 ... 315	2	–
500 VA, 50 Hz	355 ... 450	3	–
400 V/690 V, 50 Hz	90 ... 400	4	–
690 VY, 50 Hz	90 ... 400	5	–
For other voltages see Page 2/91	90 ... 500	6	–

Motors with Explosion Protection

Motors with High Efficiency IE2 in cast-iron and steel versions

Selection and ordering data (continued)

- Cooling: self-ventilated (IC 411)
 - Insulation: thermal class 155 (temperature class F), IP55 degree of protection, utilization in accordance with thermal class 130 (temperature class B), S1-100 %
 - Type of protection: "Non-sparking" in accordance with EN 60079-15; 2010: CE 0102 II 3G Ex nA IIC T3 Gc

8-pole: 750 rpm at 50 Hz

O Without additional charge

• This order code only determines the price of the version –
Additional plain text is required.

✓ With additional charge

O.R. On request

– Not possible

For dual voltages 230 V/400 V, 220 V/380 V, 400 V/690 V or 380 V/660 V:

- For motors for converter-fed operation, the converter rating plate is stamped with 380 V or 400 V.
- For motors with a Dahlander circuit, the lower voltage is generally specified.

Voltages not listed in the catalog are only available on request.

Motors without Explosion Protection

LOHER CHEMSTAR and VARIO 1PS0 motor series

General information

Technical specifications

LOHER CHEMSTAR and VARIO 1PS0 motor series without explosion protection

The motors of series 1PS0 without explosion protection are available as LOHER CHEMSTAR and VARIO motors. Motors that operate in a "safe" or "non-explosive" environment do not require any special mechanical and electrical protection against explosive gas, vapor or dust. There is no risk of explosion in this case. The CHEMSTAR motors can be mechanically designed in accordance with VIK specifications ("Verband der Industriellen Energie- und Kraftwirtschaft e. V.", the Association of the Industrial Energy and Power Industry). These motors therefore correspond mechanically to the VIK recommendation, they have no Ex marking and are not permitted to be used in potentially explosive atmospheres of Zone 2. VIK motors with Ex certification are available for selection in series 1PS1.

In general, these motors are suitable for applications in production plants or process engineering equipment in factories (conveyor belts, elevators and cranes, escalators and water pumps).

General technical specifications

LOHER CHEMSTAR and VARIO 1PS0 motors

Motor type	A...A
Frame size	90 ... 500
Output range (50 Hz types)	0.37 ... 1400 kW (thermal utilization in accordance with temperature class B at ambient temperature = 40 °C)
Number of poles	2 to 12-pole, also higher number of poles for special versions Pole-changing: <ul style="list-style-type: none">• 2 speeds, e.g. 4-/2-pole, 8-/4-pole, 12-/6-pole• 3 speeds, e.g. 8-/4-/2-pole, 8-/6-/4-pole Dahlander or separate windings for square-law or constant torques
Voltage range	Up to 1000 V
Rated voltage	Normal low voltage Non-standard voltage and/or frequency as required by the customer
Operating mode	S1 and others
Degree of protection	IP55, IP56 and IP65 to IP68
Cooling method	IC 411, IC 416, special cooling methods such as non-ventilated IC 410, IC 71W water-jacket-cooled
Type of construction	All common types of construction + special types of construction
Housing	Cast-iron or steel
Bearings	Roller bearings (standard) and special bearings for high axial and radial forces
Types of protection	None
Noise level	All motors are noise-optimized (noise values in accordance with EN 60034-9) low-noise version for 2-pole motors (GG3) is possible as an option

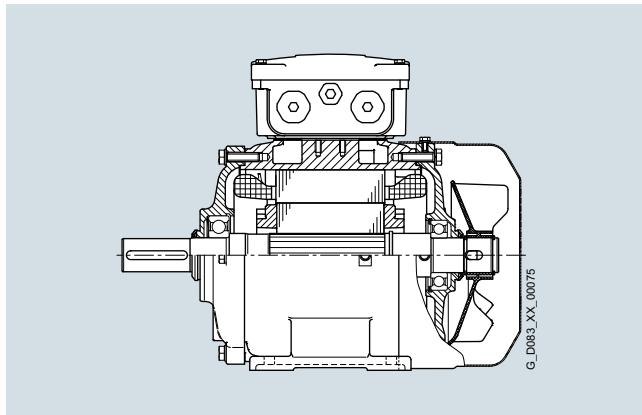

Motors without Explosion Protection

Housing, ventilation

Housing and fan for motors of the LOHER CHEMSTAR and VARIO 1PS0 series

Frame size	Housing Material	Design of housing feet ¹⁾	Surface	Bearing plates Material	Fan cover Material	Fan ²⁾ Material
LOHER CHEMSTAR						
90 ... 280	Cast-iron	Cast	With cooling fins	Cast-iron	Sheet steel	Plastic ³⁾
315		Screwed on				Aluminum ³⁾
355		Cast				Steel
LOHER VARIO						
355 ... 450	Steel	Welded	With cooling fins	Cast-iron	Sheet steel	Steel
500 ²⁾				Steel, bearing hub in cast-iron		

¹⁾ For designs with feet only.

²⁾ Suitable for both directions of rotation, but LOHER VARIO 2- and 4-pole are only suitable for one direction of rotation.

³⁾ For specific operating conditions, the external fans can be constructed in aluminum for frame sizes 90 to 225 and in sheet steel for frame sizes 250 to 315. This applies in the case of increased coolant temperature in particular and a high number of starts. The cooling air flow from NDE to DE must not be obstructed. The intake area in front of the fan cover must not be obstructed.

LOHER CHEMSTAR and VARIO 1PS0 motor series

General information

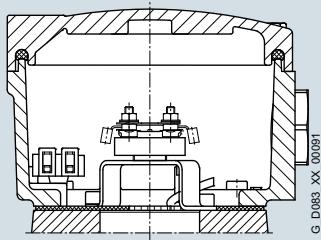

Technical specifications (continued)

Terminal boxes

The position of the terminal box and cable entries can be obtained from the tables below. The terminal boxes can be rotated by 90° which allows the incoming supply cable to be fed in from different sides.

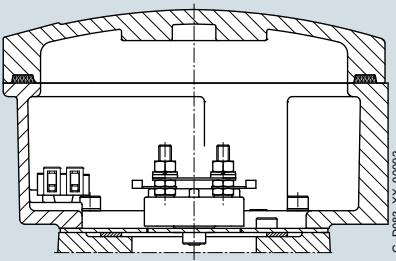

Monitoring devices or anti-condensation heaters are connected via auxiliary terminals in the terminal box. In frame size 132 and above, the auxiliary terminals can be installed in an auxiliary terminal box that is mounted on the side of the terminal box corresponding to the type of protection of the motor. The design of the terminal boxes can be seen in the schematic diagrams. The number and size of the main and auxiliary terminals as well as their characteristic data can be obtained from the tables below.

Figure 1 Terminal box for LOHER CHEMSTAR frame sizes 90 to 112

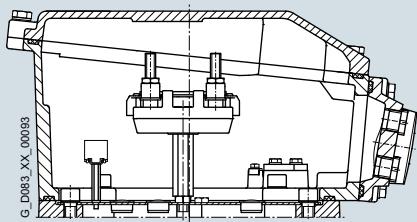

Auxiliary terminal box is not possible

Figure 2 Terminal box for LOHER CHEMSTAR frame sizes 132 to 225

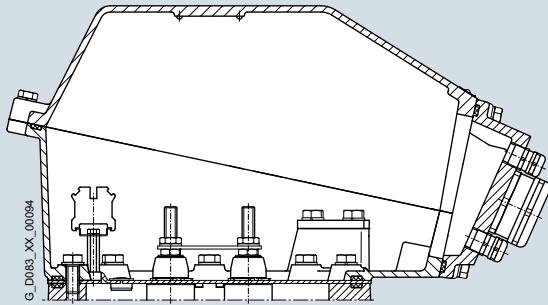

Frame sizes 132 to 160, 1 auxiliary terminal box (**M50**) is possible,
Frame sizes 180 to 225, 2 auxiliary terminal boxes (**M50**) are possible

Figure 3 Terminal box for LOHER CHEMSTAR frame sizes 250 to 280

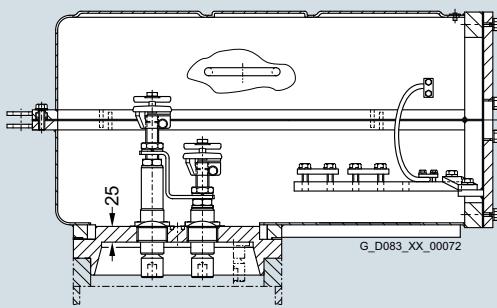

3 auxiliary terminal boxes (**M50**) are possible

Figure 4 Terminal box for LOHER CHEMSTAR frame sizes 315 to 355

3 auxiliary terminal boxes (**M52**) are possible

Figure 5 Terminal box for LOHER VARIO frame sizes 355 to 500

With the VARIO connection system, the auxiliary terminal boxes (max. 3) are mounted on the housing

Entry thread for PTC thermistor, heating:
M20 × 1.5/D = 6 up to 12 mm

The entry threads are sealed on delivery with certified plugs. The terminal boxes will only be supplied with cable glands in accordance with the table if specially ordered. Special cable glands can be fitted on request.

¹⁾ Rated voltage/max. working voltage 400 V/440 V.

²⁾ Maximum conductor cross-section with cable lug.

³⁾ Alternatively, larger studs for higher rated current.

⁴⁾ Materials used for standard gland: polyamide

⁵⁾ Other threads, number and size on request.

⁶⁾ Number and size of entry threads according to DIN 42925.

⁷⁾ Cable glands suitable for the infeed of unshielded/non-reinforced cables and leads.

⁸⁾ Cable glands for NPT thread on request.

⁹⁾ Undrilled gland plate.

Motors without Explosion Protection

LOHER CHEMSTAR and VARIO 1PS0 motor series

General information

Technical specifications (continued)

Electrical design

The outputs and electrical values listed in the selection tables can be changed by modifying the configurations. For example, if a copper cage rotor is used in place of a die-cast aluminum rotor, an even higher degree of efficiency can be achieved.

The insulation system (stator winding) and the connection system (terminal boxes, terminals) of this motor series are designed for rated voltages up to 1000 V.

The motors are equipped with 6 terminals. They can be operated in star or delta. The standard connection for all 400 V motors is delta connection. They are therefore suitable for 400 VΔ/690 VY and for Y-Δ starting at 400 V. The 500 V motors are available both for 500 VY and for 500 VΔ, provided that one of the two variants is not preferred for winding reasons.

Motors of the 1PS0 series are wound in accordance with temperature class F (155 °C). Thermal utilization is only according to class B (130 °C). For a fixed voltage motor, therefore, increased output of 12 % on average is possible for continuous duty at a coolant temperature of 40 °C without the need for prior consultation. To maintain the IE2 efficiency class, the rating plate will be stamped with temperature class B (130 °C) only. An increase in coolant temperature from 40 °C to 60 °C for rated output and full utilization of temperature class F (155 °C) is permissible. Exceptions, such as utilization of temperature class F at rated output and 40 °C coolant temperature, are indicated in the selection tables.

Operation on a frequency converter

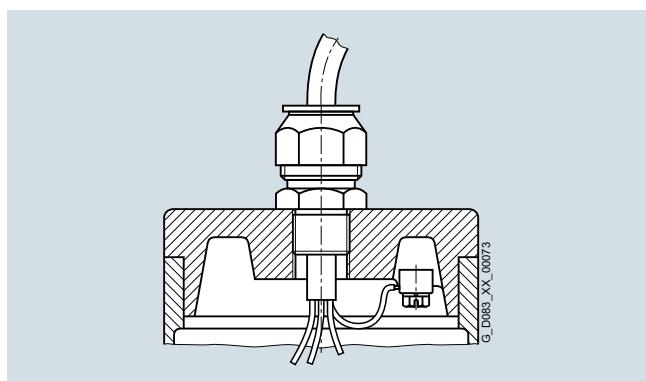

Most motors in this series can also be operated on frequency converters without any modifications to the electrical design, due to the use of "Overcoat" double-layer enameled wires and optimized impregnation techniques. On ordering, if it is known that the motor will be converter-fed, the motors will be equipped with 3 PTC thermistors with a rated shutdown temperature of 145 °C (KL145). The temperature sensors, in combination with specific parameter settings on the converter, perform sole thermal monitoring of the motor. Motor circuit breakers can be dispensed with. The PTC thermistors can be connected to the thermistor connections provided in the converter or to a trip unit.

Three-phase motors with external cables

Three-phase motors with externally routed connecting cables are used in machines or ventilation systems in which the electrical connections are routed via a separately mounted terminal box due to the space constraints.

Design

The motors correspond to the surface-cooled versions in this catalog. A gland plate is mounted in place of the terminal box (Options G48/G49).

Frame sizes and types of construction: See dimensional drawings

Connection cables: The free length of connection cable must be specified when ordering. The standard length is 1.5 m. Two or more cable entries are used in the case of pole-changing motors or single-speed motors with rated current > 70 A. The permissible coolant temperature is dependent on the connection cables used.

Cable types (standard version)

Temperature class of the motor	Cable Type	Max. rated voltage U_{rated} V	Max. temperature at conductor °C
F	Ölflex	500	-40 ... +80
F	NSSHöu-J	1000	-20 ... +80
F	EWKF/SIHf	500	-50 ... +180

Motors with built-on backstop

If reverse motion of the drive has to be prevented following switch-off, three-phase motors with mechanical backstop can be used. Backstops are maintenance-free and have individual spring-loaded clamping elements. The backstops of the type CSK are supplied with permanent lubrication. The clamping elements have a tendency to lift. In backstops of the FXM type series, the clamping elements lift automatically after approach due to the centrifugal force. Wear therefore does not occur at rated speed of the motor.

The backstop is not permitted to be used as protection against rotation in the wrong direction caused by switching despite the interlock. The direction of rotation must be specified on ordering.

The motor outputs are as specified in the selection tables in this catalog. The assignment of backstops to frame sizes is specified in the table below. Frame sizes 90 to 112 have the same dimensions as standard motors. Dimensional drawings are available for the larger types on request.

Backstops for motors of frame sizes 132 to 355

Motor	Backstop		
Frame size	No. of poles	Type	M_t Nm
132	2, 4, 6	FXM 51-25 DX	680
160	2, 4, 6	FXM 66-25 DX	1480
180	2, 4, 6	FXM 66-25 DX	1480
200	2, 4, 6, 8	FXM 86-25 DX	2410
225	2, 4, 6, 8	FXM 86-25 DX	2410
250	2, 4, 6, 8	FXM 100-50 DX	6000
280	2, 4, 6, 8	FXM 120-50 SX	10400
315	2, 4, 6, 8	FXM 120-50 SX	10400
355	2	FXM 120-50 SX	10400
355	4, 6	FXM 140-50 SX	15200

With the backstops listed in the table above, motors of frame sizes 132 to 355 can be supplied in IP55 or IP56 degree of protection. Higher degrees of protection on request.

¹⁾ Outside the IE code classification according to IEC 60034-30.

³⁾ Only possible with 690 V, 60 Hz (values apply to 690 V).

²⁾ Motor with special rotor (Cu).

Motors without Explosion Protection

LOHER CHEMSTAR and VARIO 1PS0 motor series

Motors in cast-iron and steel versions

- ✓ With additional charge
- O.R. Possible on request
- Not possible

For dual voltages 230 V/400 V, 220 V/380 V, 400 V/690 V or 380 V/660 V:

- For motors for converter-fed operation, the converter rating plate is stamped with 380 V or 400 V.
- For motors with a Dahlander circuit, the lower voltage is generally specified.

Voltages not listed in the catalog are only available on request.

Standard brake supply voltage: 230 V, 1-phase

Other special grease – ETO option (Engineer To Order) without order code	-	O. R.															
Pt100 bearing in tolerance class A with calibration certificate – only in combination with Q44	V76	-	-	-	-	-	-	-	-	-	-	-	-	-	O. R. O. R. O. R. O. R.		
One transmitter each (2 in total) 4 to 20 mA for Pt100 bearing DE and NDE	V83	-	-	-	-	-	-	-	-	-	-	-	-	-	✓	✓	✓
Sensor for housing vibration monitoring Bently Nevada Accelerometers without separate terminal box – for each sensor	V16	-	-	-	-	-	-	-	-	-	-	-	-	-	✓	✓	✓
Bearing ventilation at DE for lower bearing temperature for roller bearing design grease-lubricated	V17	-	-	-	-	-	-	-	-	-	-	-	-	-	O. R. O. R. O. R. O. R.		
Bearing insulation at both ends for roller bearing design motors (DE linked to ground) – for horizontal mounting only (vertical mounting on request)	V18	-	-	-	-	-	-	-	-	-	-	-	-	-	✓	✓	✓
Grease extractors for DE and NDE	V21	-	-	-	-	-	-	-	-	-	-	-	-	-	✓	✓	✓
Automatic grease lubricator at DE and NDE (permissible temperature range from -15 to +50 °C)	V22	-	-	-	-	-	-	-	-	-	-	-	-	-	✓	✓	✓
Enlarged spent grease chamber at DE and NDE	V25	-	-	-	-	-	-	-	-	-	-	-	-	-	✓	✓	✓
External grounding (additionally)	W46	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	-	-	-
VIK design – including W14 , W69	K30	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	-
LOHER CHEMSTAR Plus design, including VIK design – including K30 , K51 , W14 , W69 and IP66 bearing seal, vibrations as grade B	W09	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	-	-	-
Second rating plate, supplied loose	K31	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Second rating plate installed in terminal box	W47	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Extra rating plate stamped with data for converter-fed operation – data for quadratic torque in speed range 1:10 and constant torque in speed ranges 1:3 and 1:10	Y80 • and identification code	○	○	○	○	○	○	○	○	○	○	○	○	○	✓	✓	✓
Extra rating plate for customer data (each plate) – data must be specified as text in the order	Y82 • and identification code	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Rating plates made of stainless steel	W48	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	-	-	-
Rating plates in languages other than English and German – main rating plate or extra rating plates O.R., factory clarification required	W49	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Additional measures for 2 to 4 years storage in accordance with storage regulations	W50	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Anti-condensation heater 230 V	K45	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Anti-condensation heater 115 V	K46	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Anti-condensation heater, 110 to 120 V (min. 100 V, max. 132 V) – preferred	M12	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Anti-condensation heater, 210 to 250 V (min. 200 V, max. 264 V) – preferred	M13	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

O.R. Possible on request

= Not possible

1) Coding in 8th position of the article number, for
LOHER CHEMSTAR = 2.

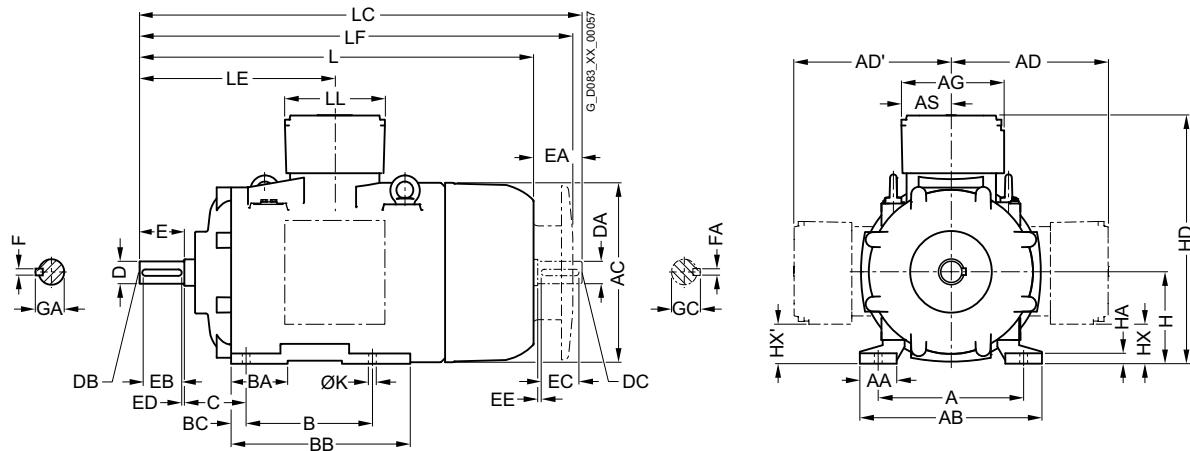

2) Acceptance tests must be selected additionally. For example, for the first motor select **F83** or **F93**, and for each additional motor **F01**. Inclusive of costs for certification authority and inspector, and shaft test if specified by certification authority. LOHER CHEMSTAR for essential drive is possible on request as an ETO option (Engineer To Order) without an option code.

Tools and Engineering

Security notes

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, solutions, machines, devices, and/or networks. They are important components in a holistic industrial security concept. With this in mind, Siemens' products and solutions undergo continuous development. Siemens recommends strongly that you regularly check for product updates.

For the secure operation of Siemens products and solutions, it is necessary to take suitable preventive action (e.g. cell protection concept) and integrate each component into a holistic, state-of-the-art industrial security concept. Third-party products that may be in use should also be considered.

For more information about industrial security, visit
www.siemens.com/industrialsecurity

To receive information about product updates on a regular basis, register for our product newsletter.

Tools and Engineering

SinaSave energy efficiency tool

Overview

Payback calculator for energy-efficient drive systems

SinaSave calculates the extent of the potential savings that are possible in a specific drive application, based on the plant characteristics. Potential savings of up to 70 % can be achieved. SinaSave also works as a payback calculator, stating how quickly investing in an energy-efficient motor will pay off in mains operation or with a frequency converter for variable-speed operation. The payback period will frequently be just a few months.

For mains operation, SinaSave calculates the cost savings and payback period of Siemens energy-saving motors of efficiency class IE3 (IEC) or Premium Efficiency (NEMA) compared to motors of the standard efficiency classes IE2 and IE1 (IEC) or High Efficiency (NEMA), individually selected or familiar motors as part of a complete plant assessment.

For converter operation, SinaSave takes all necessary plant-specific parameters and values required for the process into account. Other basic data for the program include the number of working days and work shifts, as well as the load curve that decides the extent of the energy-saving effect throughout the day and the year. From the entered plant-specific data, SinaSave first obtains the drive system with the appropriate output and the price of the corresponding frequency converter. In a further step, the program determines the energy requirements of the variable-speed drive system and compares it to the calculated values for all alternative concepts that could be considered.

More information

SinaSave is available on the Internet free of charge at www.siemens.com/sinasave

More information about services for energy saving is available on the Internet at www.siemens.com/energy-saving

Drive Technology Configurator

OverviewConfiguration of drive technology products

The Drive Technology Configurator (DT Configurator) helps you to select the optimum products for your application – starting with gear units, motors, converters and the associated options and components and ending with controllers, software licenses and connection technology. With or without detailed knowledge of products: preselected product groups, deliberate navigation through selection menus and direct product selection through entry of the product number support quick, efficient and convenient configuration.

Also, comprehensive documentation comprising technical data sheets, operating instructions, certificates and 2D/3D dimensional drawings can be selected in the DT Configurator. Immediate ordering is possible by simply transferring a parts list to the shopping cart of the Industry Mall.

DT Configurator – Efficient drive configuration:

- Quick and easy configuration of drive components
- Configuration of drive systems for pumps, fans and compressor applications from 1 kW to 2.6 MW
- Selection from a wide range of products
- Comprehensive documentation
- Support with retrofitting
- Direct ordering via the Industry Mall

System requirements:

- Internet access as well as a standard browser (e.g. Internet Explorer V7.0 and higher, Firefox V5.0 and higher)
- Documentation (data sheets, dimensional drawings, etc.) is output in PDF or RTF format
- The DT Configurator can be used without the need for registration

Tools and Engineering

SIZER for Siemens Drives configuration tool

Overview

The following drives and controls can be engineered in a user-friendly way using the SIZER for Siemens Drives configuration tool:

- SINAMICS Low Voltage and MICROMASTER 4 drive systems
- Motor starters
- SINUMERIK CNC system
- SIMOTION Motion Control System
- SIMATIC Technology

It provides support when setting up the technologies involved in the hardware and firmware components required for a drive task. SIZER for Siemens Drives covers the full range of operations required to configure a complete drive system, from basic single drives to complex multi-axis applications.

SIZER for Siemens Drives supports all of the engineering steps in a workflow:

- Configuring the power supply
- Designing the motor and gearbox, including calculation of mechanical transmission elements
- Configuring the drive components
- Selecting the required accessories
- Selecting the line-side and motor-side power options, e.g. cables, filters, and reactors

When SIZER for Siemens Drives was being designed, particular importance was placed on a high degree of usability and a universal, function-based approach to the drive application. The extensive user guidance makes it easy to use the tool. Status information keeps you continually informed about the progress of the configuration process.

The SIZER for Siemens Drives user interface is available in English, French, German and Italian.

The drive configuration is saved in a project. In the project, the components and functions used are displayed in a hierarchical tree structure.

The project view permits the configuration of drive systems and the copying/inserting/modifying of drives already configured.

The configuration process produces the following results:

- A parts list of the required components (export to Excel, use of the Excel data sheet for import to SAP)
- Technical specifications of the system
- Characteristic curves
- Comments on system reactions
- Mounting arrangement of drive and control components and dimensional drawings of motors
- Energy requirements of the configured application

These results are displayed in a results tree and can be reused for documentation purposes.

Support is provided by the technological online help menu:

- Detailed technical specifications
- Information about the drive systems and their components
- Decision-making criteria for the selection of components
- Online help in English, French, German, Italian, Chinese and Japanese

System requirements

- PG or PC with Pentium III min. 800 MHz (recommended > 1 GHz)
- 512 MB RAM (1 GB RAM recommended)
- At least 4.1 GB of free hard disk space
- An additional 100 MB of free hard disk space on the Windows system drive
- Screen resolution 1024 × 768 pixels (1280 × 1024 pixels recommended)
- Operating system:
 - Windows XP Home Edition SP2
 - Windows XP Professional 32 bit SP2
 - Windows XP Professional 64 bit SP2
 - Windows Vista Business
 - Windows 7 Ultimate 32 bit
 - Windows 7 Professional 32 bit
- Microsoft Internet Explorer V5.5 SP2

SIZER WEB ENGINEERING engineering tool

Overview***Drive engineering – flexible, tailored and user-friendly***

You can quickly find a solution for your drive task with the web-based tool: menu-prompted workflows navigate you through the technical selection and dimensioning of products and drive systems, including the accessories.

Based on an integrated inquiry functionality, SIZER WEB ENGINEERING also offers you special customized solutions for applications which cannot be addressed using "Standard Products", i.e. the focus is on flexibility and customized solutions.

The following product groups are presently supported:

- High-voltage motors
- Low-voltage motors
- Medium-voltage converters
- Low-voltage converters
- DC converters

The tool can also be used to design the following drive systems:

- Medium-voltage systems
- Low-voltage systems
 - Basic single-axis applications for pumps, fans, and compressors
 - More complex applications (on condition that SIZER for Siemens Drives is installed)

Comprehensive documentation, such as data sheets, startup calculations, dimensional drawings, offer documentation and a lot more are integrated in the tool.

The result: customized solutions for your drive tasks.

Example of startup calculation

Internet access as well as a standard browser (e.g. Internet Explorer from V7.0, Firefox from V3.0) are required. After successful registration and release, SIZER WEB ENGINEERING is available 24/7.

Partners at Industry

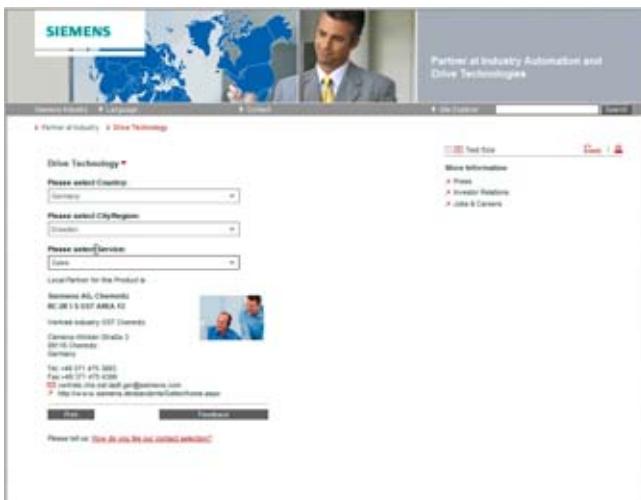

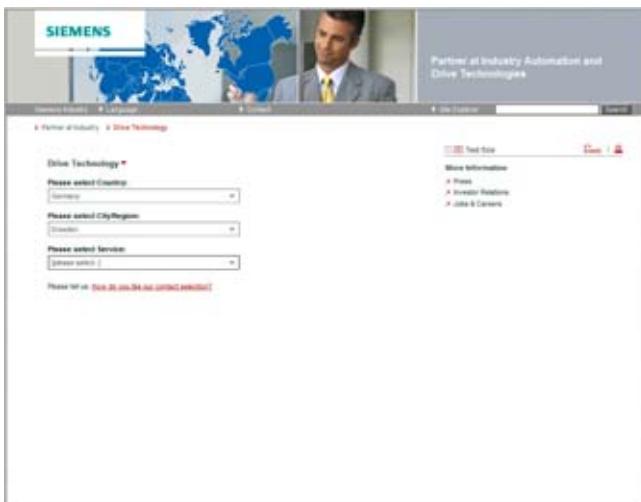

At Siemens Industry we are resolutely pursuing the same goal: long-term improvement of your competitive ability. We are committed to this goal. Thanks to our commitment, we continue to set new standards in automation and drive technology. In all industries – worldwide.

At your service locally, around the globe for consulting, sales, training, service, support, spare parts ... on the entire Industry Automation and Drive Technologies range.

Your personal contact can be found in our Contacts Database at:
www.siemens.com/automation/partner

You start by selecting a

- Product group,
 - Country,
 - City,
 - Service.

Information and Ordering in the Internet and on DVD

Siemens Industry Automation and Drive Technologies in the WWW

A detailed knowledge of the range of products and services available is essential when planning and configuring automation systems. It goes without saying that this information must always be fully up-to-date.

Siemens Industry Automation and Drive Technologies has therefore built up a comprehensive range of information in the World Wide Web, which offers quick and easy access to all data required.

Under the address

www.siemens.com/industry

you will find everything you need to know about products, systems and services.

Product Selection Using the Interactive Catalog CA 01 of Industry

Detailed information together with convenient interactive functions:

The interactive catalog CA 01 covers more than 80 000 products and thus provides a full summary of the Siemens Industry Automation and Drive Technologies product base.

Here you will find everything that you need to solve tasks in the fields of automation, switchgear, installation and drives. All information is linked into a user interface which is easy to work with and intuitive.

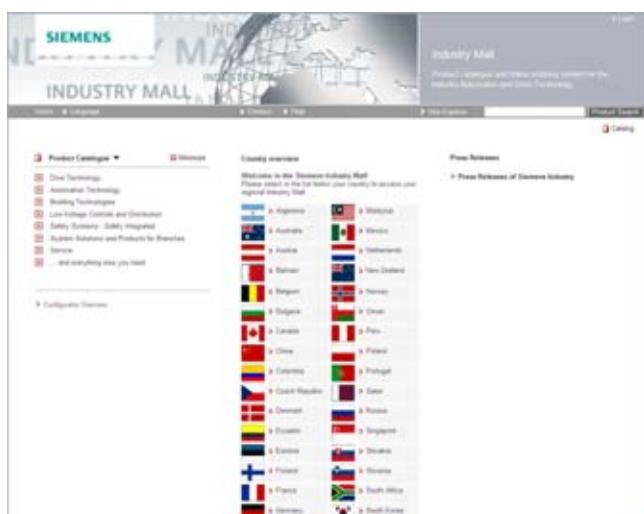

After selecting the product of your choice you can order at the press of a button, by fax or by online link.

Information on the interactive catalog CA 01 can be found in the Internet under

www.siemens.com/automation/ca01

or on DVD.

Easy Shopping with the Industry Mall

The Industry Mall is the electronic ordering platform of Siemens AG on the Internet. Here you have online access to a huge range of products presented in an informative and attractive way.

Data transfer via EDIFACT allows the whole procedure from selection through ordering to tracking and tracing of the order to be carried out. Availability checks, customer-specific discounts and preparation of quotes are also possible.

Numerous additional functions are available to support you.

For example, powerful search functions make it easy to select the required products. Configurators enable you to configure complex product and system components quickly and easily. CAx data types are also provided here.

Please visit the Industry Mall on the Internet under:

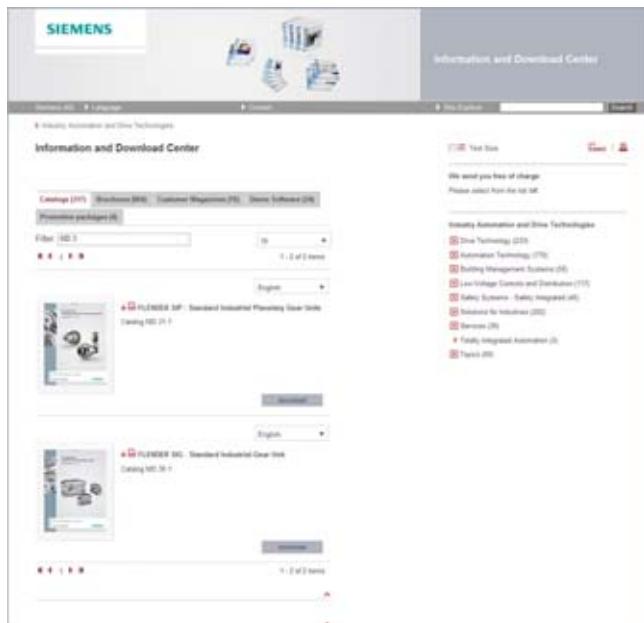

www.siemens.com/industrymall

Downloading Catalogs

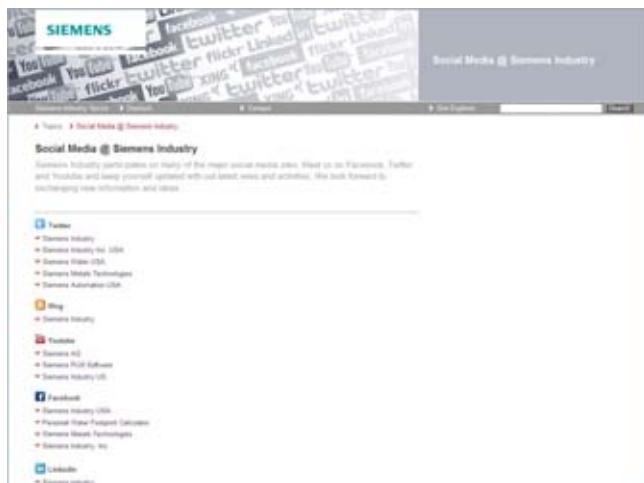

In addition to numerous other useful documents, you can also find the catalogs listed on the back inside cover of this catalog in the Information and Download Center. Without having to register, you can download these catalogs in PDF format or increasingly as digital page-turning e-books.

The filter dialog box above the first catalog displayed makes it possible to carry out targeted searches. If you enter "MD 3" for example, you will find both the MD 30.1 and MD 31.1 catalogs. If you enter "ST 70" both the ST 70 catalog and the associated news or add-ons are displayed.

Visit us on the web at:

Social Media

Connect with Siemens through social media: visit our social networking sites for a wealth of useful information, demos on products and services, the opportunity to provide feedback, to exchange information and ideas with customers and other Siemens employees, and much, much more. Stay in the know and follow us on the ever-expanding global network of social media.

Connect with Siemens Industry at our central access point:

www.siemens.com/industry/socialmedia

Or via our product pages at:

www.siemens.com/automation

or

www.siemens.com/drives

To find out more about Siemens' current social media activities visit us at:

www.siemens.com/socialmedia

Mobile Media

Discover the world of Siemens.

We are also constantly expanding our offering of cross-platform apps for smartphones and tablets. You will find the current Siemens apps at the app store (iOS) or at Google Play (Android).

The Siemens app, for example, tells you all about the history, latest developments and future plans of the company – with informative pictures, fascinating reports and the most recent press releases.

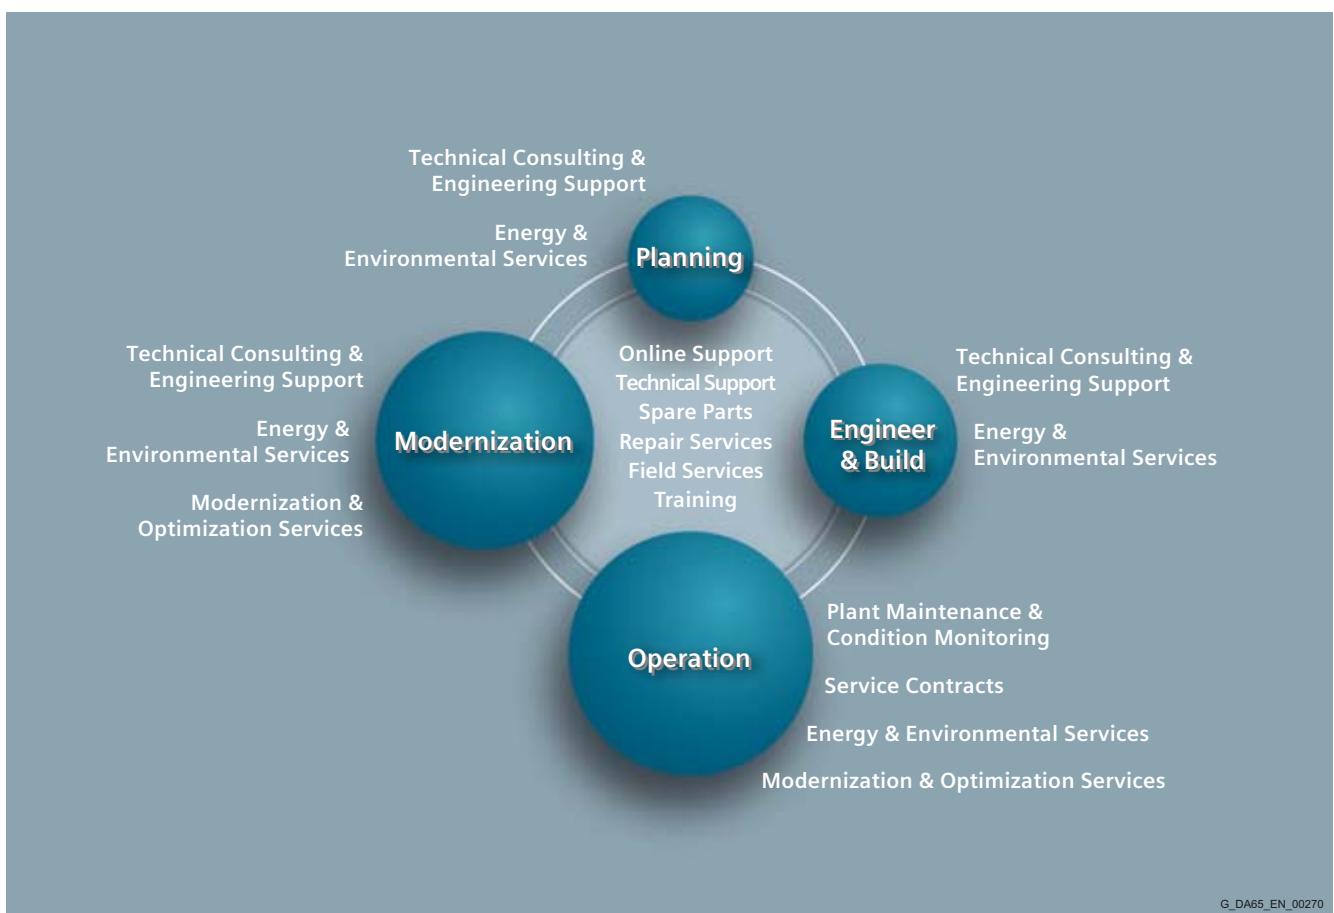

Your machines and plant can do more – with Industry Services.

Whether it is production or process industry – in view of rising cost pressure, growing energy costs, and increasingly stringent environmental regulations, services for industry are a crucial competitive factor in manufacturing as well as in process industries.

All over the world Siemens supports its customers with product, system, and application-related services throughout the entire life cycle of a plant. Right from the earliest stages of planning, engineering, and building, all the way to operation and modernization. These services enable customers to benefit from the Siemens experts' unique technological and product knowledge and industry expertise.

Thus downtimes are reduced and the utilization of resources is optimized. The bottom line: increased plant productivity, flexibility, and efficiency, plus reduced overall costs.

Discover all advantages of our service portfolio:

Industry Services for the entire life cycle

Online Support

Online support is a comprehensive information system for all questions relating to products, systems, and solutions that Siemens has developed for industry over time. With more than 300,000 documents, examples and tools, it offers users of automation and drive technology a way to quickly find up-to-date information. The 24-hour service enables direct, central access to detailed product information as well as numerous solution examples for programming, configuration and application.

The content, in six languages, is increasingly multimedabased – and now also available as a mobile app. Online support's "Technical Forum" offers users the opportunity to share information with each other. The "Support Request" option can be used to contact Siemens' technical support experts. The latest content, software updates, and news via newsletters and Twitter ensure that industry users are always up to date.

www.siemens.com/industry/onlinesupport

Online Support App

Using the Online Support app, you can access over 300,000 documents covering all Siemens industrial products – anywhere, any time. Regardless of whether you need help implementing your project, fault-finding, expanding your system or are planning a new machine.

You have access to FAQs, manuals, certificates, characteristics curves, application examples, product notices (e.g. announcements of new products) and information on successor products in the event that a product is discontinued.

Just scan the product code printed on the product directly using the camera of your mobile device to immediately see all technical information available on this product at a glance. The graphical CAx information (3D model, circuit diagrams or EPLAN macros) is also displayed. You can forward this information to your workplace using the e-mail function.

The search function retrieves product information and articles and supports you with a personalized suggestion list. You can find your favorite pages – articles you need frequently – under "mySupport". You also receive selected news on new functions, important articles or events in the News section.

Scan the QR code
for information on
our Online Support
app.

The app is available free of charge from the Apple App Store (iOS) or from Google Play (Android).

Technical Support

The ability to quickly analyze system and error messages and take appropriate action are key factors in ensuring that plants run safely and efficiently. Questions can arise at any time and in any industry, whether it's an individual product or a complete automation solution. Siemens technical support offers individual technical assistance in matters related to functionality, how to operate, applications, and fault clearance in industrial products and systems – at any time and globally, over the phone, by e-mail, or via remote access. Experienced experts from Siemens answer incoming questions promptly. Depending on the requirements, they first consult specialists in the areas of development, on-site services, and sales. Technical support is also available for discontinued products that are no longer available. Using the support request number, any inquiry can be clearly identified and systematically tracked.

<http://support.automation.siemens.com/WW/view/en/16605032>

Industry Services for the entire life cycle
Spare Parts

Drive and automation systems must be available at all times. Even a single missing spare part can bring the entire plant to a standstill – and result in substantial financial losses for the operator. The spare parts services from Siemens protects against such losses – with the aid of quickly available, original spare parts that ensure smooth interaction with all other system components. Spare parts are kept on hand for up to ten years; defective parts can be returned. For many products and solutions, individual spare parts packages ensure a preventive stock of spare parts on-site. The spare parts services is available around the world and around the clock. Optimum supply chain logistics ensure that replacement components reach their destination as quickly as possible. Siemens' logistics experts take care of planning and management as well as procurement, transportation, customs handling, warehousing, and complete order management for spare parts.

<http://support.automation.siemens.com/WW/view/en/43502238>
Repair Services

Reliable electrical and electronic equipment is crucial for operating continuous processes. That is why it is essential that motors and converters always undergo highly specialized repair and maintenance. Siemens offers complete customer and repair services – on site and in repair centers – as well as technical emergency services worldwide. The repair services include all measures necessary to quickly restore the functionality of defective units. In addition, services such as spare parts logistics, spare parts storage and rapid manufacturing are available to plant operators in all verticals. With a global network of certified repair shops operated by Siemens as well as third parties, Siemens handles the maintenance and overhaul of motors, converters, and other devices as an authorized service partner.

<http://support.automation.siemens.com/WW/view/en/43512848>
Field Services

It's a top priority in all industries: the availability of plants and equipment. Siemens offers specialized maintenance services such as inspection and upkeep as well as rapid fault clearance in industrial plants – worldwide, continuously, and even with emergency services as needed. The services include startup as well as maintenance and fault clearance during operation. The startup service includes checking the installation, function tests, parameterization, integration tests for machines and plants, trial operation, final acceptance, and employee training. All services, including remote maintenance of drives, are also available as elements of customized service contracts.

Industry Services

Industry Services for the entire life cycle

Training

Increasingly, up-to-date knowledge is becoming a determining factor in success. One of the key resources of any company is well-trained staff that can make the right decision at the right moment and take full advantage of the potential. With SITRAIN – Training for Industry, Siemens offers comprehensive advanced training programs. The technical training courses convey expertise and practical knowledge directly from the manufacturer. SITRAIN covers Siemens' entire product and system portfolio in the field of automation and drives. Together with the customer, Siemens determines the company's individual training needs and then develops an advanced training program tailored to the desired requirements. Additional services guarantee that the knowledge of all Siemens partners and their employees is always up-to-date.

<http://support.automation.siemens.com/WW/view/en/43514324>

Technical Consulting & Engineering Support

The efficiency of plants and processes leads to sustainable economic success. Individual services from Siemens help save substantial time and money while also guaranteeing maximum safety. Technical consulting covers the selection of products and systems for efficient industrial plants. The services include planning, consulting, and conceptual design as well as product training, application support, and configuration verification – in all phases of a plant's lifecycle and in all questions related to product safety. Engineering support offers competent assistance throughout the entire project, from developing a precise structure for startup to product-specific preparation for implementation as well as support services in areas such as prototype development, testing and acceptance.

<http://support.automation.siemens.com/WW/view/en/16605680>

Energy & Environmental Services

Efficient energy use and resource conservation – these top sustainability concerns pay off – both for the environment and for companies. Siemens offers integrated solutions that unlock all technical and organizational potential for successful environmental management. Customized consulting services are aimed at sustainably lowering the cost of energy and environmental protection and thus increasing plant efficiency and availability. The experts provide support in the conceptual design and implementation of systematic solutions in energy and environmental management, enabling maximum energy efficiency and optimized water consumption throughout the entire company. Improved data transparency makes it possible to identify savings potential, reduce emissions, optimize production processes, and thereby noticeably cut costs.

<http://support.automation.siemens.com/WW/view/en/42350774>

Industry Services for the entire life cycle
Modernization & Optimization Services

High machine availability, expanded functionality and selective energy savings – in all industries, these are decisive factors for increasing productivity and lowering costs. Whether a company wants to modernize individual machines, optimize drive systems, or upgrade entire plants, Siemens' experts support the projects from planning to commissioning.

Expert consulting and project management with solution responsibility lead to security and make it possible to specifically identify savings potential in production. This secures investments over the long term and increases economic efficiency in operation.

<http://support.automation.siemens.com/WW/view/en/66005532>

Plant Maintenance & Condition Monitoring

Modern industrial plants are complex and highly automated. They must operate efficiently in order to ensure the company's competitive strength. In addition, the steadily increasing networking of machines and plants require consistent security concepts. Maintenance and status monitoring as well as the implementation of integrated security concepts by Siemens' experts support optimum plant use and avoid downtime. The services include maintenance management as well as consulting on maintenance concepts, including the complete handling and execution of the necessary measures. Complete solutions also cover remote services, including analysis, remote diagnosis, and remote monitoring. These are based on the Siemens Remote Services platform with certified IT security.

<http://support.automation.siemens.com/WW/view/en/59456862>

Service Contracts

Making maintenance costs calculable, reducing interfaces, speeding up response times, and unburdening the company's resources – the reduced downtimes that these measures achieve increase the productivity of a plant. Service contracts from Siemens make maintenance and repairs more cost-effective and efficient. The service packages include local and remote maintenance for a system or product group in automation and drive technology. Whether you need extended service periods, defined response times, or special maintenance intervals, the services are compiled individually and according to need. They can be adjusted flexibly at any time and used independently of each other. The expertise of Siemens' specialists and the capabilities of remote maintenance thus ensure reliable and fast maintenance processes throughout a plant's entire lifecycle.

Appendix

Metal surcharges

Explanation of the raw material/metal surcharges¹⁾

Surcharge calculation

To compensate for variations in the price of the raw materials silver, copper, aluminum, lead, gold, dysprosium²⁾ and/or neodym³⁾, surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The surcharges are calculated in accordance with the following criteria:

- Basic official price of the raw material

Basic official price from the day prior to receipt of the order or prior to release order (daily price) for³⁾

- Silver (sales price, processed)
- Gold (sales price, processed)

and for⁴⁾

- Copper (lower DEL notation + 1 %)
- Aluminum (aluminum in cables)
- Lead (lead in cables)

- Metal factor of the products

Certain products are displayed with a metal factor. The metal factor determines the official price (for those raw materials concerned) as of which the metal surcharges are applied and the calculation method used (weight or percentage method). An exact explanation is given below.

Structure of the metal factor

The metal factor consists of several digits; the first digit indicates whether the percentage method of calculation refers to the list price or a possible discounted price (customer net price) (L = list price / N = customer net price).

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

1st digit	List or customer net price using the percentage method
2nd digit	for silver (AG)
3rd digit	for copper (CU)
4th digit	for aluminum (AL)
5th digit	for lead (PB)
6th digit	for gold (AU)
7th digit	for dysprosium (Dy) ²⁾
8th digit	for neodym (Nd) ²⁾

Weight method

The weight method uses the basic official price, the daily price and the raw material weight. In order to calculate the surcharge, the basic official price must be subtracted from the daily price. The difference is then multiplied by the raw material weight.

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. The raw material weight can be found in the respective product descriptions.

Percentage method

Use of the percentage method is indicated by the letters A-Z at the respective digit of the metal factor.

The surcharge is increased – dependent on the deviation of the daily price compared with the basic official price – using the percentage method in "steps" and consequently offers surcharges that remain constant within the framework of this "step range". A higher percentage rate is charged for each new step. The respective percentage level can be found in the table below.

Metal factor examples

L E A -----	
↑	Basis for % surcharge: List price
↑	Silver Basis 150 €, Step 50 €, 0.5 %
↑	Copper Basis 150 €, Step 50 €, 0.1 %
	No surcharge for aluminum
	No surcharge for lead
	No surcharge for gold
	No surcharge for dysprosium
	No surcharge for neodym

N - A 6 -----	
↑	Basis for % surcharge: Customer net price
↑	No surcharge for silver
↑	Copper Basis 150 €, Step 50 €, 0.1 %
↑	Aluminum acc. to weight, basic offic. price 225 €
	No surcharge for lead
	No surcharge for gold
	No surcharge for dysprosium
	No surcharge for neodym

-- 3 -----	
↑	No basis necessary
↑	No surcharge for silver
↑	Copper acc. to weight, basic official price 150 €
	No surcharge for aluminum
	No surcharge for lead
	No surcharge for gold
	No surcharge for dysprosium
	No surcharge for neodym

¹⁾ Refer to the separate explanation on the next page regarding the raw materials dysprosium and neodym (= rare earths).

²⁾ For a different method of calculation, refer to the separate explanation for these raw materials on the next page.

³⁾ Source: Umicore, Hanau (www.metalsmanagement.umincore.com).

⁴⁾ Source: German Trade Association for Cables and Conductors (www.kabelverband.org).

Explanation of the raw material/metal surcharges for dysprosium and neodym (rare earths)

Surcharge calculation

To compensate for variations in the price of the raw materials silver¹⁾, copper¹⁾, aluminum¹⁾, lead¹⁾, gold¹⁾, dysprosium and/or neodym, surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. The surcharge for dysprosium and neodym is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The surcharge is calculated in accordance with the following criteria:

- Basic official price of the raw material²⁾
Three-month basic average price (see below) in the period before the quarter in which the order was received or the release order took place (= average official price) for
 - dysprosium (Dy metal, 99 % min. FOB China; USD/kg)
 - neodym (Nd metal, 99 % min. FOB China; USD/kg)
- Metal factor of the products
Certain products are displayed with a metal factor. The metal factor indicates (for those raw materials concerned) the basic official price as of which the surcharges for dysprosium and neodym are calculated using the weight method. An exact explanation of the metal factor is given below.

Three-month average price

The prices of rare earths vary according to the foreign currency, and there is no freely accessible stock exchange listing. This makes it more difficult for all parties involved to monitor changes in price. In order to avoid continuous adjustment of the surcharges, but to still ensure fair, transparent pricing, an average price is calculated over a three-month period using the average monthly foreign exchange rate from USD to EUR (source: European Central Bank). Since not all facts are immediately available at the start of each month, a one-month buffer is allowed before the new average price applies.

Examples of calculation of the average official price:

Period for calculation of the average price:	Period during which the order/release order is effected and the average price applies:
Sep 2012 – Nov 2012	Q1 in 2013 (Jan – Mar)
Dec 2012 – Feb 2013	Q2 in 2013 (Apr – Jun)
Mar 2013 – May 2013	Q3 in 2013 (Jul – Sep)
Jun 2013 – Aug 2013	Q4 in 2013 (Oct – Dec)

Structure of the metal factor

The metal factor consists of several digits; the first digit is not relevant to the calculation of dysprosium and neodym.

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

1st digit	List or customer net price using the percentage method
2nd digit	for silver (AG) ¹⁾
3rd digit	for copper (CU) ¹⁾
4th digit	for aluminum (AL) ¹⁾
5th digit	for lead (PB) ¹⁾
6th digit	for gold (AU) ¹⁾
7th digit	for dysprosium (Dy)
8th digit	for neodym (Nd)

Weight method

The weight method uses the basic official price, the average price and the raw material weight. In order to calculate the surcharge, the basic official price must be subtracted from the average price. The difference is then multiplied by the raw material weight.

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. Your Sales contact can inform you of the raw material weight.

Metal factor examples

----- 7 1	No basis necessary
	No surcharge for silver
	No surcharge for copper
	No surcharge for aluminum
	No surcharge for lead
	No surcharge for gold
	Dysprosium acc. to weight, basic official price 300 €
	Neodym acc. to weight, basic official price 50 €

¹⁾ For a different method of calculation, refer to the separate explanation for these raw materials on the previous page.

Conditions of sale and delivery

1. General Provisions

By using this catalog you can acquire hardware and software products described therein from Siemens AG subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Please note that the scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

1.1 For customers with a seat or registered office in Germany

For customers with a seat or registered office in Germany, the following applies subordinate to the T&C:

- the "General Terms of Payment"¹⁾ and,
- for software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office in Germany"¹⁾ and,
- for other supplies and services, the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹⁾.

1.2 For customers with a seat or registered office outside Germany

For customers with a seat or registered office outside Germany, the following applies subordinate to the T&C:

- the "General Terms of Payment"¹⁾ and,
- for software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office outside of Germany"¹⁾ and
- for other supplies and/or services, the "General Conditions for Supplies of Siemens Industry for Customers with a Seat or Registered Office outside of Germany"¹⁾.

2. Prices

The prices are in € (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation.

You will find a detailed explanation of the metal factor on the page headed "Metal surcharges".

To calculate the surcharge (except in the cases of dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a one-month buffer (details on the calculation can be found in the explanation of the metal factor).

3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog – especially with regard to data, dimensions and weights given – these are subject to change without prior notice.

4. Export regulations

We shall not be obligated to fulfill any agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes and/or other sanctions.

Export of goods listed in this catalog may be subject to licensing requirements. We will indicate in the delivery details whether licenses are required under German, European and US export lists. Goods labeled with "AL" not equal to "N" are subject to European or German export authorization when being exported out of the EU. Goods labeled with "ECCN" not equal to "N" are subject to US re-export authorization.

The export indications can be viewed in advance in the description of the respective goods on the Industry Mall, our online catalog system. Only the export labels "AL" and "ECCN" indicated on order confirmations, delivery notes and invoices are authoritative.

Even without a label, or with label "AL:N" or "ECCN:N", authorization may be required i.a. due to the final disposition and intended use of goods.

If you transfer goods (hardware and/or software and/or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you must comply with all applicable national and international (re-)export control regulations.

If required for the purpose of conducting export control checks, you (upon request by us) shall promptly provide us with all information pertaining to the particular end customer, final disposition and intended use of goods delivered by us respectively works and services provided by us, as well as to any export control restrictions existing in this relation.

The products listed in this catalog may be subject to European/German and/or US export regulations. Any export requiring approval is therefore subject to authorization by the relevant authorities.

Errors excepted and subject to change without prior notice.

FLENDER Standard Couplings	MD 10.1	
FLENDER High Performance Couplings	MD 10.2	
FLENDER SIG Standard industrial gear unit	MD 30.1	
FLENDER SIP Standard industrial planetary gear units	MD 31.1	
Process Instrumentation and Analytics		
Field Instruments for Process Automation	FI 01	
<i>Digital:</i> SIPART Controllers and Software	MP 31	
Products for Weighing Technology	WT 10	
<i>Digital:</i> Process Analytical Instruments	PA 01	
<i>Digital:</i> Process Analytics, Components for the System Integration	PA 11	
Low-Voltage Power Distribution and Electrical Installation Technology	<i>Catalog</i>	
SENTRON · SIVACON · ALPHA Protection, Switching, Measuring and Monitoring Devices, Switchboards and Distribution Systems Standards-Compliant Components for Photovoltaic Plants	LV 10	
3WT Air Circuit Breakers up to 4000 A	LV 11	
3VT Molded Case Circuit Breakers up to 1600 A	LV 35	
<i>Digital:</i> SIVACON System Cubicles, System Lighting and System Air-Conditioning	LV 36	
<i>Digital:</i> ALPHA Distribution Systems	LV 50	
ALPHA FIX Terminal Blocks	LV 51	
SIVACON S4 Power Distribution Boards	LV 52	
<i>Digital:</i> SIVACON 8PS Busbar Trunking Systems	LV 56	
<i>Digital:</i> DELTA Switches and Socket Outlets	ET D1	
Motion Control		
SINUMERIK & SIMODRIVE Automation Systems for Machine Tools	NC 60	
SINUMERIK & SINAMICS Equipment for Machine Tools	NC 61	
SINUMERIK 840D sl Type 1B Equipment for Machine Tools	NC 62	
SINUMERIK 808 Equipment for Machine Tools	NC 81.1	
SINUMERIK 828 Equipment for Machine Tools	NC 82	
SIMOTION, SINAMICS S120 & SIMOTICS Equipment for Production Machines	PM 21	
Drive and Control Components for Cranes	CR 1	
Power Supply		
Power supply SISTOP	KT 10.1	
Safety Integrated		
Safety Technology for Factory Automation	SI 10	
SIMATIC HMI/PC-based Automation		
Human Machine Interface Systems/ PC-based Automation	ST 80/ ST PC	
SIMATIC Ident		
Industrial Identification Systems	ID 10	
SIMATIC Industrial Automation Systems		
Products for Totally Integrated Automation	ST 70	
SIMATIC PCS 7 Process Control System	ST PCS 7	
System components		
SIMATIC PCS 7 Process Control System	ST PCS 7 T	
Technology components		
Add-ons for the SIMATIC PCS 7	ST PCS 7 AO	
Process Control System		
SIMATIC NET		
Industrial Communication	IK PI	
SIRIUS Industrial Controls		
SIRIUS Industrial Controls	IC 10	
Information and Download Center		
Digital versions of the catalogs are available on the Internet at: www.siemens.com/industry/infocenter		
There you'll find additional catalogs in other languages.		
Please note the section "Downloading catalogs" on page "Online services" in the appendix of this catalog.		

Digital: These catalogs are only available as a PDF.
